### APPLICATIONS:

- 5V and 3.3V mixed voltage systems
- Data communication and telecommunication systems

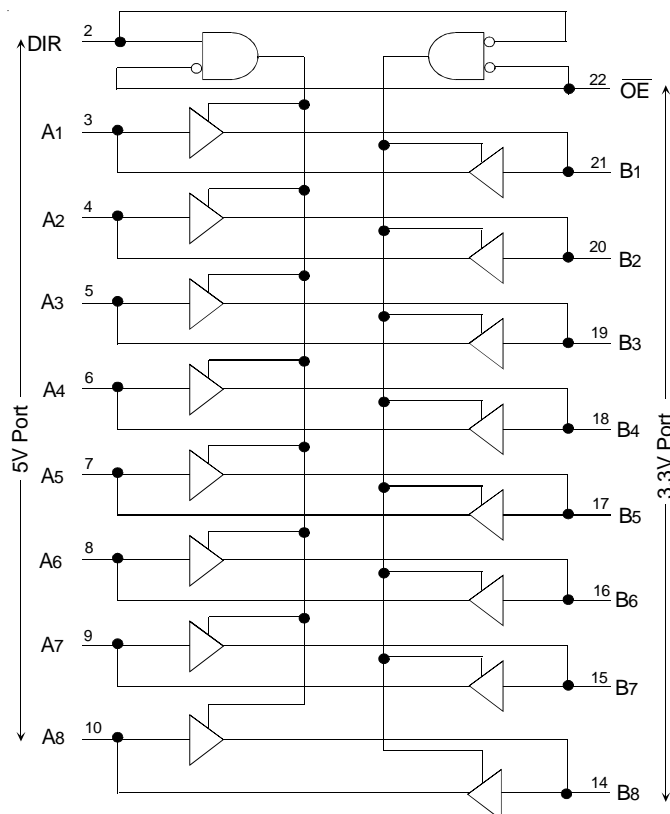

### DESCRIPTION:

The LVC4245A is manufactured using advanced dual metal CMOS technology. This octal noninverting bus transceiver contains two separate supply rails; B port has  $V_{CCB}$ , which is set at 3.3V, and A port has  $V_{CCA}$ , which is set at 5V. This allows for translation from a 3.3V to a 5V environment, and vice-versa.

This device is ideal for asynchronous communication between two buses (A and B). The direction control pin (DIR) controls the direction of data flow. The output enable pin ( $\overline{OE}$ ) overrides the direction control and disables both ports. All inputs are designed with hysteresis for improved noise margin.

The LVC4245A has been designed with a  $\pm 24mA$  output driver. This driver is capable of driving a moderate to heavy load while maintaining speed performance.
