

# Micropower, Low Voltage Comparator with 400mV Reference

## FEATURES

- Internal 400mV Reference
- Total Threshold Error:  $\pm 1.25\%$  Max at 25°C
- Wide Supply Range: 1.4V to 18V
- Specified for -40 to 125°C Temperature Range
- Low Quiescent Current: 6.5 $\mu$ A Typ at 5V
- Internal Hysteresis: 6.5mV Typ
- Low Input Bias Current:  $\pm 10nA$  Max
- Over-The-Top® Input also Includes Ground
- Open-Collector Output Allows Level Translation
- Choice of Input Polarities: LT6703-2/LT6703-3
- Available in a 2mm × 2mm DFN Package

## APPLICATIONS

- Battery-Powered System Monitoring
- Threshold Detectors
- Window Comparators
- Relay Driving
- Optoisolator Driving
- Industrial Control Systems
- Handheld Instruments

## DESCRIPTION

The LT®6703-2/LT6703-3 combine a micropower, low voltage comparator with a 400mV reference in a tiny DFN package. Operating with supplies from 1.4V up to 18V, these devices draw only 6.5 $\mu$ A, making them ideal for low voltage system monitoring. Hysteresis is included in the comparator, ensuring stable operation.

The comparator has one input available externally while the other input is connected internally to the reference. The comparator output is open collector and the output load can be referred to any voltage up to 18V independent of supply voltage. The output stage has a guaranteed current sink capability of more than 5mA over temperature.

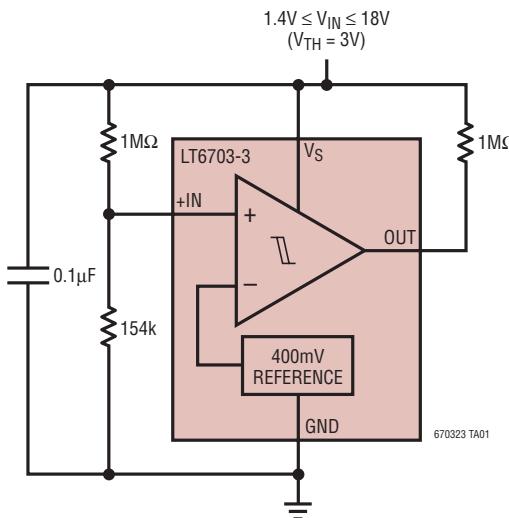

The two versions of this part differ by the polarity of the available comparator input. The LT6703-2 has an inverting input and the LT6703-3 has a noninverting input. Both versions are offered in commercial, industrial and automotive temperature ranges.

**Note 1:** Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to any Absolute Maximum Rating condition for extended periods may affect device reliability and lifetime.

**Note 2:** A heat sink may be required to keep the junction temperature below the absolute maximum rating when the output is shorted indefinitely.

**Note 3:** The inputs are protected by ESD diodes to the ground pin. If the input voltage exceeds  $-0.3\text{V}$  below ground, the input current should be limited to less than  $10\text{mA}$ .

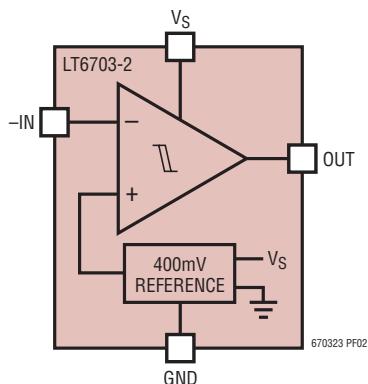

**Note 4:** The LT6703C-2/-3, and LT6703I-2/-3 are guaranteed functional over the operating temperature range of  $-40^{\circ}\text{C}$  to  $85^{\circ}\text{C}$ .

The LT6703H-2/-3, is guaranteed functional over the operating temperature range of  $-40^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ .

**Note 5:** The LT6703C-2/-3, are guaranteed to meet the specified performance from  $0^{\circ}\text{C}$  to  $70^{\circ}\text{C}$ . The LT6703C-2/-3 are designed, characterized and expected to meet specified performance from  $-40^{\circ}\text{C}$  to  $85^{\circ}\text{C}$  but are not tested or QA sampled at these temperatures. The LT6703I-2/-3, are guaranteed to meet specified performance from  $-40^{\circ}\text{C}$  to  $85^{\circ}\text{C}$ . The LT6703H-2/-3, is guaranteed to meet specified performance from  $-40^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ .

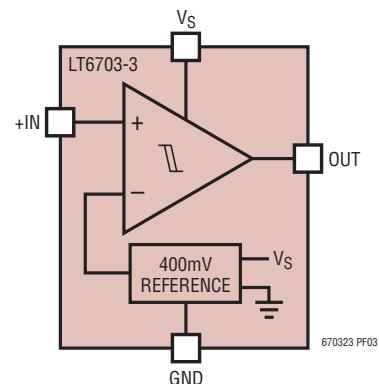

**Note 6:**  $V_{\text{TH}}$  defines the threshold voltage of the comparator and combines the effect of offset and reference accuracy.

## PIN FUNCTIONS

**OUT:** Open-Collector Output of Comparator. This pin provides drive for up to 40mA of load current. Off-state voltage may be as high as 18V above GND, regardless of  $V_S$  used.

**GND:** Ground. This pin is also the low side return of the internal 400mV reference.

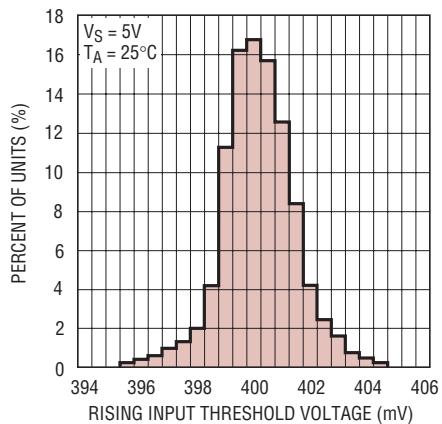

**IN:** External Input for Comparator. The voltage on this pin can range from -0.3V to 18V with respect to GND regardless of  $V_S$  used. The input is noninverting for the LT6703-3, and inverting for the LT6703-2. The other comparator input is internally connected to the 400mV reference.

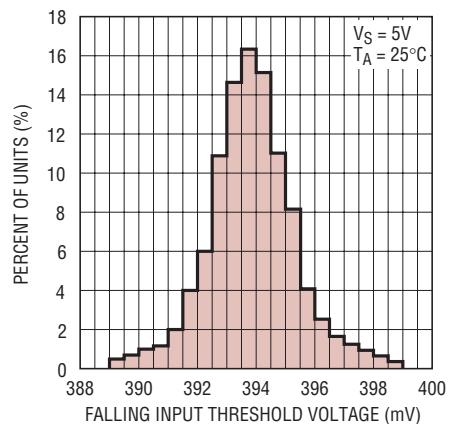

**$V_S$ :** Supply Voltage. The parts are characterized for operation with  $1.4V \leq V_S \leq 18V$  with respect to GND.

## APPLICATIONS INFORMATION

The LT6703-2/LT6703-3 devices are micropower comparators with a built-in 400mV reference. Features include wide supply voltage range (1.4V to 18V), Over-The-Top input and output range, 2% accurate rising input threshold voltage and 6.5mV typical built-in hysteresis.

### Internal Reference

Each comparator has one input available externally. The two versions of the part differ by the polarity of the available input (i.e., inverting or noninverting). The other comparator input is connected internally to the 400mV reference. The rising input threshold voltage of the comparator is designed to be equal to that of the reference (i.e.,  $\approx 400\text{mV}$ ). The reference voltage is established with respect to the device GND connection.

### Hysteresis

Each comparator has built-in 6.5mV (typical) of hysteresis to simplify designs, to insure stable operation in the presence of noise at the inputs, and to reject supply rail noise that might be induced by state change load transients. The hysteresis is designed such that the falling input threshold voltage is nominally 393.5mV. External positive feedback circuitry can be employed to increase effective hysteresis if desired, but such circuitry will provide an apparent effect on both the rising and falling input thresholds (the actual internal thresholds remain unaffected).

### Comparator Input

The comparator input can range from ground to 18V, regardless of the supply voltage used. The typical input current for inputs well above the threshold (i.e.,  $>800\text{mV}$ ) is a few pA leaking into the input. With decreasing input voltage, a small bias current begins to be drawn out of the input, reaching a few nA when at ground potential. The input may be forced 100mV below ground without causing an improper output, though some additional bias current will begin to flow from the ESD input protection diode. Inputs driven further negative than 100mV below ground will not cause damage provided the current is limited to 10mA.

### Comparator Output

The comparator output is open collector and capable of sinking 40mA typical. Load currents are directed out of the GND pin of the part. The output off-state voltage may range between  $-0.3\text{V}$  and 18V with respect to ground, regardless of the supply voltage used. As with any open-collector device, the outputs of multiple comparators may be tied together to implement wire-AND logic functions.

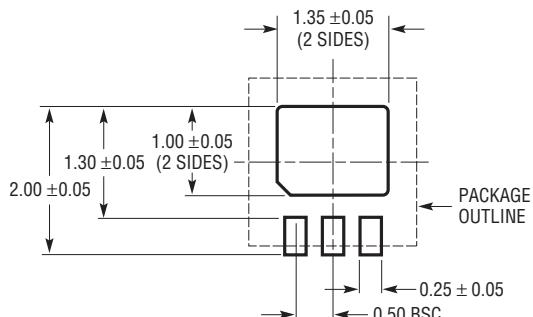

### Power Supplies

The comparator circuitry operates from a single 1.4V to 18V supply. A minimum  $0.1\mu\text{F}$  bypass capacitor is required between the  $V_S$  pin and GND. When an output load is connected to the supply rail near the part and the output is sinking more than 5mA, a  $1\mu\text{F}$  bypass capacitor is recommended. In instances where the supply is relatively “soft” (such as with small batteries) and susceptible to load steps, an additional  $47\Omega$  series decoupling resistor can further improve isolation of supply transients from the  $V_S$  pin.

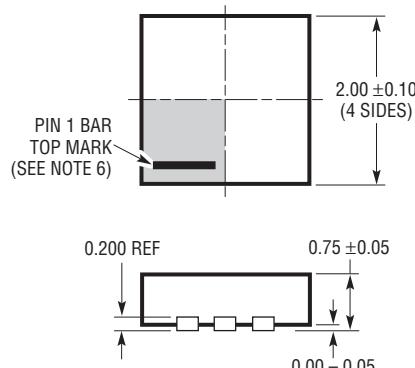

## PACKAGE DESCRIPTION

### DC Package

**3-Lead Plastic DFN (2mm × 2mm)**  
 (Reference LTC DWG # 05-08-1717 Rev Ø)

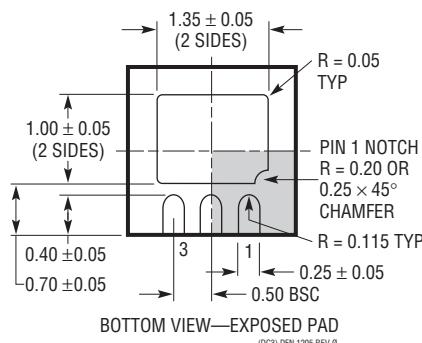

RECOMMENDED SOLDER PAD PITCH AND DIMENSIONS

NOTE:

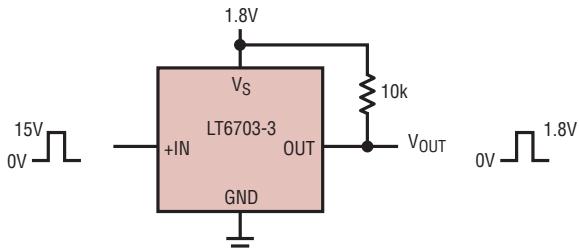

1. DRAWING TO BE MADE A JEDEC PACKAGE OUTLINE M0-229 VARIATION OF (W-TBD)
2. DRAWING NOT TO SCALE
3. ALL DIMENSIONS ARE IN MILLIMETERS
4. DIMENSIONS OF EXPOSED PAD ON BOTTOM OF PACKAGE DO NOT INCLUDE MOLD FLASH. MOLD FLASH, IF PRESENT, SHALL NOT EXCEED 0.15mm ON ANY SIDE
