

Features

- Reduced RFI and EMI
- Reduced Snubbing
- Extensive Characterization of Recovery Parameters

$V_R = 400V$
$V_F(\text{typ.})^{\textcircled{3}} = 1V$
$I_{F(AV)} = 240A$
$Q_{rr}(\text{typ.}) = 290nC$
$I_{RRM}(\text{typ.}) = 7.5A$
$t_{rr}(\text{typ.}) = 50ns$
$di_{(rec)M}/dt(\text{typ.})^{\textcircled{3}} = 270A/\mu s$

Description

HEXFRED™ diodes are optimized to reduce losses and EMI/RFI in high frequency power conditioning systems. An extensive characterization of the recovery behavior for different values of current, temperature and di/dt simplifies the calculations of losses in the operating conditions. The softness of the recovery eliminates the need for a snubber in most applications. These devices are ideally suited for power converters, motors drives and other applications where switching losses are significant portion of the total losses.
