Dual Channel Operational Amplifiers

EC4558

General Description

The EC4558 consists of two high performance operational amplifiers. The IC features high gain, high input resistance, excellent channel separation, wide range of operating voltage and internal frequency compensation. It is specifically suitable for applications in differential-in, differential-out as well as in potential-metric amplifiers and where gain and phase matched channels are mandatory. The EC4558 contains 18V maximum power supply voltage.

The EC4558 is available in DIP-8 or SOIC-8 package.

Features

- Internal frequency compensation
- Large DC voltage gain with 100 dB typical
- High input resistance with 5M typical
- Low input noise voltage with 10nV/ $\sqrt{\text{Hz}}$
- Maximum power supply voltages: 18V
- Compatible with NJM 4558

Applications

- Audio AC-3 decoded system
- Audio amplifier
