

## ■ General Description

The AME8818 is a CMOS linear regulator. It operated from 2.5V to 5.5V input voltage and delivers up to 300mA output current. The AME8818 provide low quiescent current (70uA typ) low dropout voltage (230mV @ 300mA typ), and excellent PSRR, thus marking them ideal for Data-Communications and battery applications.

The AME8818 provide over temperature and over current protected functions. It is stable with an output capacitance of 1uF or larger.

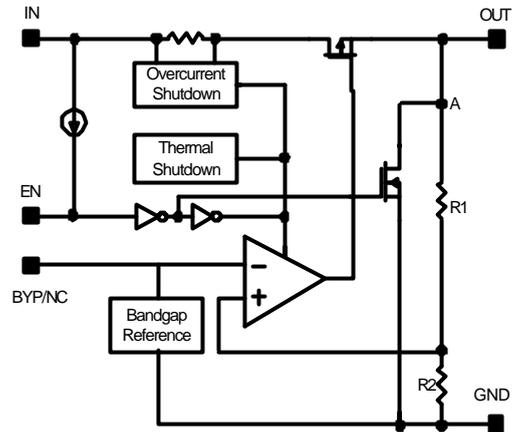

## ■ Features

- Input voltage range is from 2.5V to 5.5V
- Output voltage range is from 1.2V to 4.5V
- Low Dropout: 230mV @ 300mA
- Guaranteed 300mA Drive Current
- Factory Pre-set output voltage
- Only 1uF Output Capacitor Required for Stability
- Provided OTP, current limit
- All AME' s Green Products Meet RoHS Standards

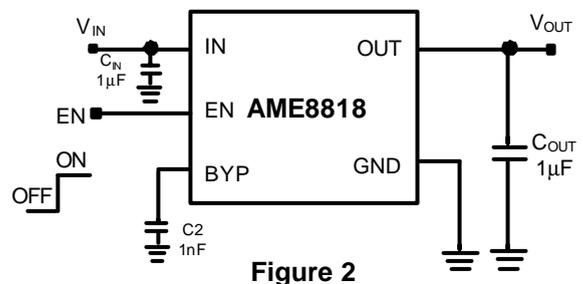

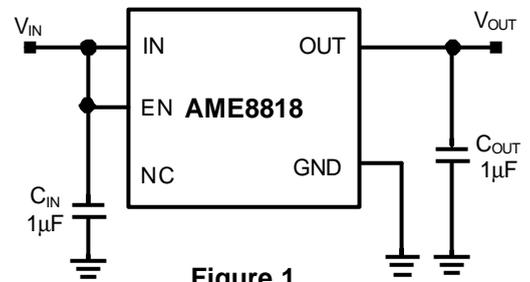

## ■ Applications

- Data-Communication
- Laptop, Palmtops, Notebook computers
- Battery Power Equipment
- Handheld Device
- PCMCIA Cards

### ■ Pin Description

Pin Name	Pin Description
IN	Input voltage pin. It should be decoupled with 1 $\mu$ F or greater capacitor.
GND	Ground connection pin.
OUT	LDO voltage regulator output pin. It should be decoupled with a 1 $\mu$ F or greater value low ESR ceramic capacitor.
EN	The Enable pin normally floats high. When pulled low, the PMOS pass transistors shut off, and all internal circuit are powered down.
NC	No Internal Connection
BYP	Bypass capacitor connection. In AME8818BEEV and AME8818CEEV, IC will select internal circuit to improve ESR. In AME8818AEEV, IC will select external circuit to improve ESR and AC ripple rejection.

**Note:**

1. The first 3 places represent product code. It is assigned by AME such as BVP.
2. A bar on top of first letter represents Green Part such as  $\overline{\text{BVP}}$ .
3. The last 3 places MXX represent Marking Code. It contains M as date code in "month", XX as LN code and that is for AME internal use only. Please refer to date code rule section for detail information.
4. Please consult AME sales office or authorized Rep./Distributor for the availability of output voltage and package type.

**■ Absolute Maximum Ratings**

Parameter	Symbol	Maximum	Unit
Input Voltage	$V_{IN}$	-0.3 to 6	V
EN Voltage	$V_{EN}$	-0.3 to 6	V
Output Current	$I_{OUT}$	$P_D / (V_{IN} - V_{OUT})$	mA
Output Voltage	$V_{OUT}$	GND-0.3 to $V_{IN} + 0.3$	V
ESD Classification	B*		

Caution: Stress above the listed absolute maximum rating may cause permanent damage to the device.

\* HBM B:2000V~3999V

**■ Recommended Operating Conditions**

Parameter	Symbol	Rating	Unit
Ambient Temperature Range	$T_A$	-40 to +85	°C
Junction Temperature Range	$T_J$	-40 to +125	
Storage Temperature Range	$T_{STG}$	-65 to +150

Shutdown Current	$I_{SHDN}$	$V_{EN} = 0V, V_{IN(min)} \quad V_{IN} = 5.5V$		5	10	$\mu A$	
Power Supply Ripple Rejection	PSRR	$f = 1KHz, I_{OUT} = 100mA, C_{out} = 1\mu F$ (Note3)		60		dB	
Enable High (enabled)	$V_{EN(HI)}$	$V_{IN(min)} \quad V_{IN} = 5.5V$	1.4		$V_{IN}$	V	
Enable Low (shutdown)	$V_{EN(LO)}$	$V_{IN(min)} \quad V_{IN} = 5.5V$	0		0.4	V	
Enable Pin Current (enabled)	$I_{EN}$	$V_{EN} = V_{IN}$		0.1	1	$\mu A$	
Thermal Shutdown Temperature	$T_{SHDN}$	Shutdown, temperature increasing		150		$^\circ C$	
	$T_{RS}$	Restore, temperature decreasing		130			

Note 1:  $V_{IN(MIN)} = V_{OUT} + V_{DROP}$  or  $V_{IN(MIN)} = 2.5V$ , whichever is greater.

Note 2: For  $V_{OUT}$  below 2.0V, Dropout Voltage is the input to output differential.

Note 3: For  $V_{OUT}$  below 1.5V, the minimum input voltage is 3.0V.

## AME8818

---

### ■ Detailed Description

The AME8818 is low-dropout, low quiescent-current linear regulator designed primarily for battery-powered applications. It is available with present output voltage ranging from 1.2V to 4.5V, and can supply loads up to 300mA.

### ■ Shutdown Mode

The AME8818 has enable-control-pin. Drive EN low to shutdown OUT. Drive EN to shutdown the entire chip, reducing supply current to 5 $\mu$ A. Connected EN to logic-high or IN for normal operation.

### ■ Circuit Limit

The AME8818 contains current limiters which monitor and control the pass transistor's Gate voltage, limiting the guaranteed maximum output current to 330mA minimum. The output can be shorted to ground for an indefinite time without damaging the part.

### ■ Thermal-Overload Protection

Thermal-overload protection limits total power dissipation in the AME8818. When the junction temperature arrive  $T_j = 160^{\circ}\text{C}$  approximately, the thermal sensor signals the shutdown logic, turning off the pass transistor and allowing the IC to cool.

### ■ Capacitor Selection and Regulator Stability

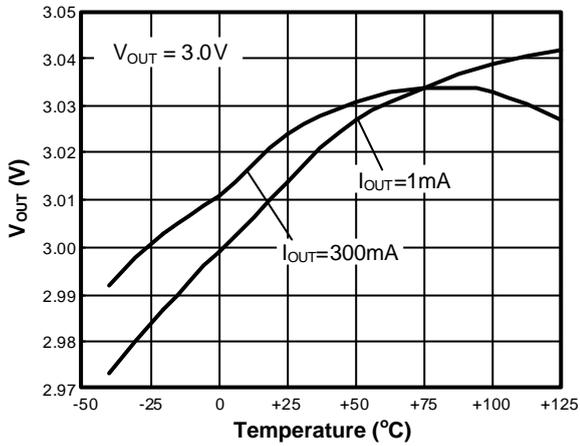

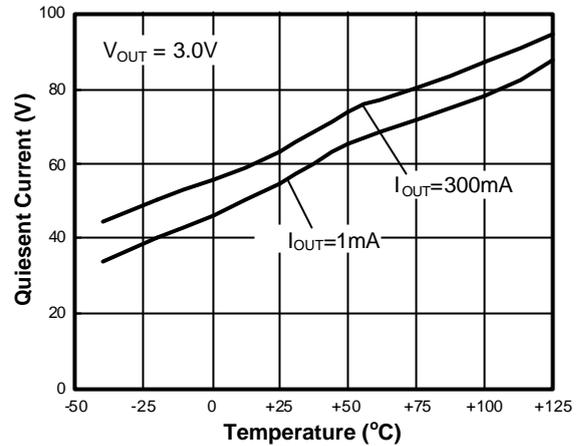

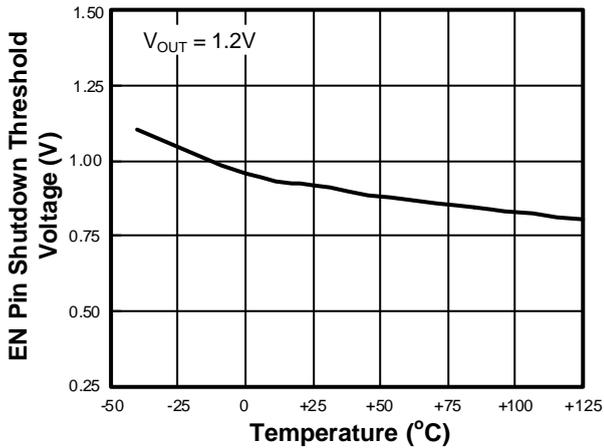

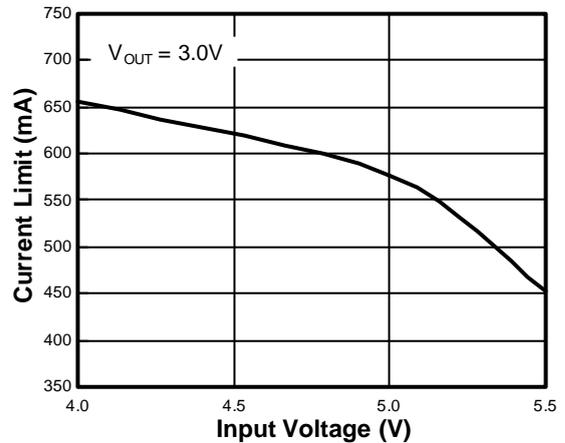

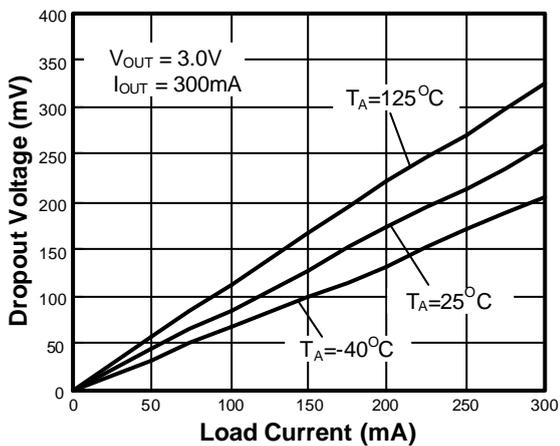

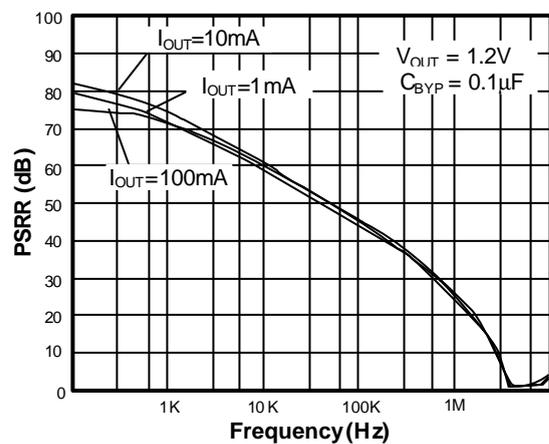

Use a 1 $\mu$ F capacitor on the AME8818 input and a 1 $\mu$ F capacitor on the OUT. Larger input capacitor values and lower ESR provide better supply noise rejection and line transient response. To reduce output noise and improve load transient voltage dips, use larger output capacitors up to 4.7 $\mu$ F. For stable operation over the full temperature range with load currents up to 300mA, input and output capacitors should be a minimum of 1 $\mu$ F by X7R.

Note that some ceramic dielectrics large capacitance and ESR variation with temperature. With dielectrics such as Z5U and Y5V, it may be necessary to use 2.2 $\mu$ F or more for up to 300mA load current to ensure stability at temperatures below  $-10^{\circ}\text{C}$ . With X7R or X5R dielectrics, 1 $\mu$ F is sufficient at all operating temperatures. These regulators are optimized for ceramic capacitors. Tantalum capacitors are not recommended.

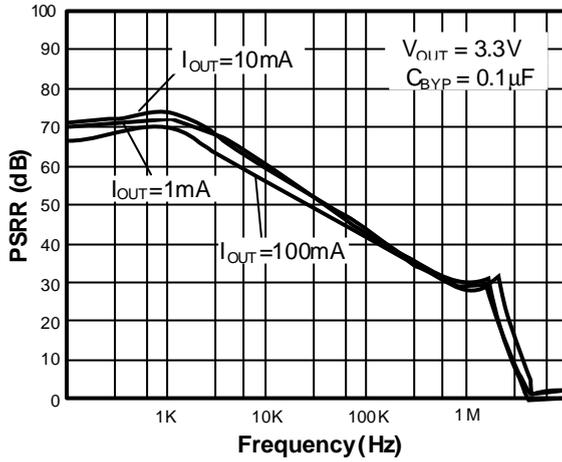

Bypass capacitor can be in between 0.1 $\mu$ F~0.001 $\mu$ F. A larger capacitor improves AC ripple rejection, but also make the output come up slowly.

### ■ PSRR and Operation from sources Other than Batteries

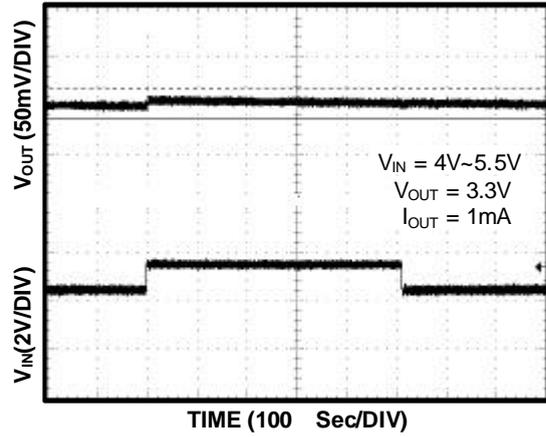

The AME8818 is designed to deliver low-dropout voltage and low quiescent currents in battery-powered system. Power-supply rejection ratio is 60dB (Typ.) at 1KHz. When operating from sources other than batteries, PSRR and transient response can be improved by increasing input, output and bypass capacitors(see PSRR vs Frequency Curve).
