CMOS

F²MC-16F MB90210 Series

MB90214/P214A/P214B/W214A/W214B/V210

■ OUTLINE

The MB90210 series is a line of 16-bit microcontrollers particularly suitable for system control of video cameras, VTRs, and copiers. The F²MC-16F CPU integrated in this series is based on the F²MC*-16, while providing enhanced instructions for high-level languages and supporting extended addressing modes.

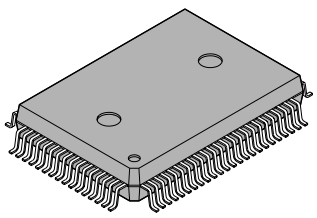
The MB90210 series incorporates a variety of peripheral resources such as a PWC timer with 4 channels, a 10-bit A/D converter with 8 channels, UART serial ports with 3 channels (1 channel for CTS and 1 channel for dual input/output pin switching), 16-bit reload timers with 8 channels, and an 8-bit PPG timer with 1 channel.

MB90P214B/W214B is under development.

*: F²MC stands for FUJITSU Flexible Microcontroller.

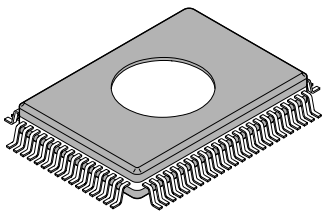
■ PACKAGE

80-pin Plastic QFP



(FPT-80P-M06)

80-pin Ceramic QFP



(FPT-80C-C02)

■ FEATURES

F²MC-16F CPU

- Minimum execution time: 62.5 ns/16-MHz oscillation (using a duty control system)
- Instruction sets optimized for controllers
  Upward object-compatible with the F²MC-16(H)
  Various data types (bit, byte, word, and long-word)
  Instruction cycle improved to speed up operation
  Extended addressing modes: 25 types
  High coding efficiency
  Access method (bank access with linear pointer)
  Enhanced multiplication and division instructions (with signed instructions added)
  Higher-precision operation using a 32-bit accumulator
- Extended intelligent I/O service (Automatic transfer function independent of instructions) access area expanded to 64 Kbytes
- Enhanced instruction set applicable to high-level language (C) and multitasking
  System stack pointer
  Enhanced pointer-indirect instructions
  Barrel shift instruction
  Stack check function
- Increased execution speed: 8-byte instruction queue
- Powerful interrupt functions: 8 levels and 29 sources

Integrated Peripheral Resources

- ROM : 64 Kbytes (MB90214)
  EPROM : 64 Kbytes (MB90W214A/W214B)
  OTPROM: 64Kbytes (MB90P214A/P214B)
- RAM: 3 Kbytes (MB90214)
  4 Kbytes (MB90P214A/P214B/W214A/W214B/V210)
- General-purpose ports: max. 65 channels
- PWC timer with time measurement function: 4 channels
- 10-bit A/D converter: 8 channels
- UART: 3 channels
- Including: 1 channel with CTS function
  1 channel with I/O pin switching function
- 16-bit reload timer
  Toggled output, external clock, and gate functions: 4 channels
  External clock and gate functions: 4 channels
- 8-bit PPG timer: 1 channel
- DTP/External-interrupt inputs: 4 channels
- Write-inhibit RAM: 256 bytes (MB90V210: 512 bytes)
- Timebase counter: 18 bits
- Clock gear function
- Low-power consumption mode
  Sleep mode
  Stop mode
  Hardware standby mode

Product Description

- MB90214 is a mask ROM product.
- MB90P214A/P214B are OTPROM products.
- MB90W214A/W214B are EPROM products. ES only.
- Operating temperature of MB90P214A/W214A is –40°C to +85°C. (However, the AC characteristics is assured in –40°C to +70°C)
- MB90V210 is a evaluation device for the program development. ES only.

■ PRODUCT LINEUP

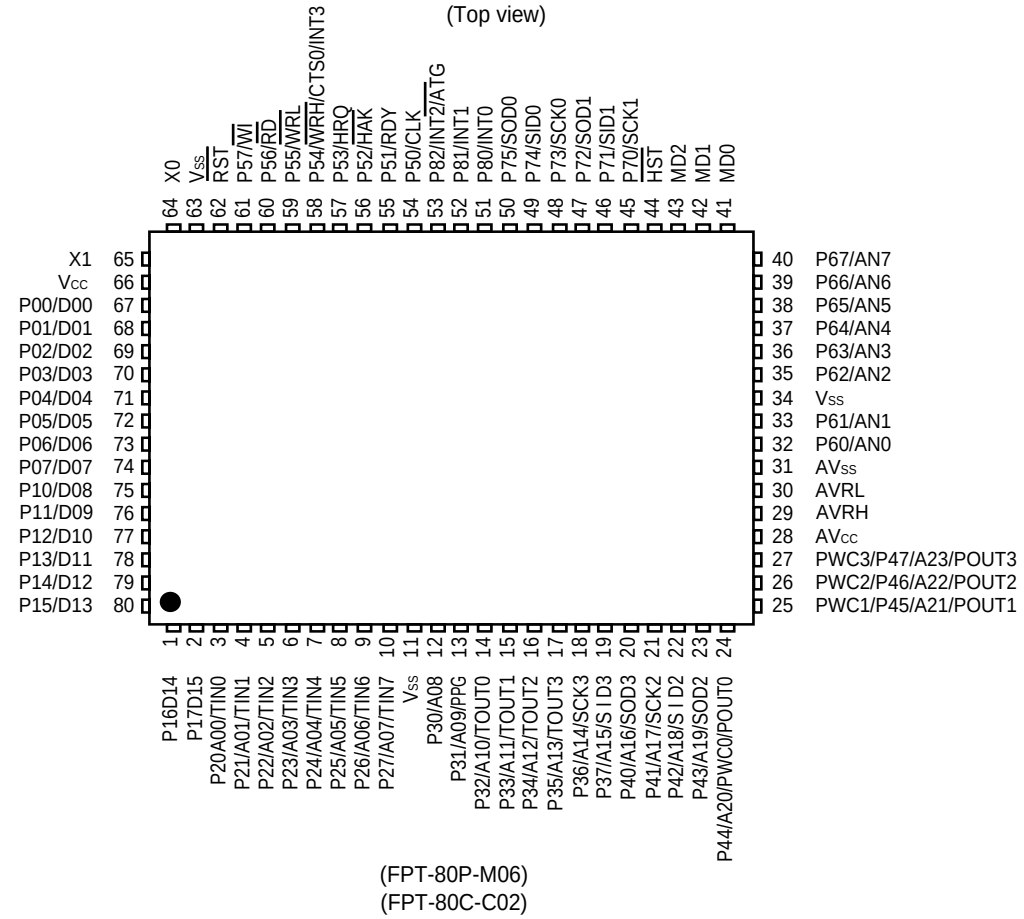
Part number / Item	MB90214	MB90P214A MB90P214B	MB90W214A MB90W214B	MB90V210
Classification	Mask ROM product	OTPROM product	EPROM product	For evaluation
ROM size	64 Kbytes	64 Kbytes	64 Kbytes	—
RAM size	3 Kbytes	4 Kbytes	4 Kbytes	4 Kbytes
CPU functions	The number of instructions: 412 Instruction bit length: 8 or 16 bits Instruction length: 1 to 7 bytes Data bit length: 1, 4, 8, 16, or 32 bits Minimum execution time: 62.5 ns/16 MHz Interrupt processing time: 1.0 μs/16 MHz (min.)			
Ports	I/O ports (N-ch open-drain): 8 I/O ports (CMOS): 57 Total: 65			
PWC timer	Number of channels: 4 16-bit reload timer operation (operating clock cycle: 0.25 μs to 1.31 ms) 16-bit pulse-width count operation (Allowing continuous/one-shot measurement, H/L width measurement, inter-edge measurement, and divided-frequency measurement)			
10-bit A/D converter	Resolution: 10 or 8 bits, Number of inputs: 8 Single conversion mode (conversion for each input channel) Scan conversion mode (continuous conversion for up to 8 consecutive channels) Continuous conversion mode (repeated conversion for a selected channel) Stop conversion mode (conversion every fixed cycle)			
UART	Number of channels: 3 (1 channel with CTS function; 1 channel with I/O pin switching function) Clock-synchronous transfer mode (full-duplex double buffering, 7- to 9-bit data length, 2400 to 62500 bps) Asynchronous transfer mode (full-duplex double buffering, 7- to 9-bit data length, 2400 to 62500 bps)			
Timer	Number of channels: 4 channels × 2 types 16-bit reload timer operation (operating clock cycle: 0.25 μs to 1.05 s)			
8-bit PPG timer	Number of channels: 1 8-bit PPG operation (operating clock cycle: 0.25 μs to 6 s)			
DTP/External interrupt	Number of inputs: 4 External interrupt mode (allowing interrupts to activate at four different request levels) Simple DMA start mode (allowing extended I^2OS to activate at two different request levels)			
Write-inhibit RAM	RAM size: 256 bytes (MB90V210: 512 bytes) RAM write-protectable with $\overline{WI}$ pin			
Standby mode	Stop mode (activated by software or hardware) and sleep mode			
Gear function	Machine clock operating frequency switching: 16, 8, 4, or 1 MHz (at 16 MHz oscillation)			
Package	FPT-80P-M06		FPT-80C-C02	PGA-256C-A02

■ DIFFERENCES BETWEEN MB90214 (MASK ROM PRODUCT) AND MB90P214A/P214B/ W214A/W214B

Part number / Item	MB90214	MB90P214A MB90P214B	MB90W214A MB90W214B
ROM	Mask ROM 64 Kbytes	OTPROM 64 Kbytes	EPROM 64 Kbytes
Pin function 43 pins	MD2 pin	MD2/V_{PP} pin	

Note: MB90V210, device used for evaluation, is not warranted for electrical specifications.

■ PIN ASSIGNMENT



(FPT-80P-M06)
(FPT-80C-C02)

■ PIN DESCRIPTION

Pin no. QFP*	Pin name	Circuit type	Function
64, 65	X0, X1	A	Crystal oscillator pins (16 MHz)
62	$\overline{RST}$	H	External reset request input pin
66	V_{CC}	Power supply	Digital circuit power supply pin
11, 34, 63	V_{SS}	Power supply	Digital circuit grounding level
67 to 74	P00 to P07	B	General-purpose I/O ports These ports are available only in the single-chip mode.
	D00 to D07		I/O pins for the lower eight bits of external data bus These pins are available in an external-bus mode.
75 to 80, 1, 2	P10 to P15, P16, P17	B	General-purpose I/O ports These ports are available in the single-chip mode and in an external-bus mode with the 8-bit data bus specified.
	D08 to D13, D14, D15		I/O pins for the upper eight bits of external data bus These pins are available in an external-bus mode with the 16-bit data bus specified.
3 to 6	P20 to P23	E	General-purpose I/O ports These ports are available only in the single-chip mode.
	A00 to A03		Output pins for external address buses A00 to A03 These pins are available in an external-bus mode.
	TIN0 to TIN3		16-bit reload timer 1 (ch.0 to ch.3) input pins These pins are available when the 16-bit reload timer 1 (ch.0 to ch.3) input specification is “enabled”. The data on the pin is read as the 16-bit reload timer 1 (ch.0 to ch.3) input (TIN0 to TIN3).
7 to 10	P24 to P27	E	General-purpose I/O ports These ports are available only in the single-chip mode.
	A04 to A07		Output pins for external address buses A04 to A07 These pins are available in an external-bus mode.
	TIN4 to TIN7		16-bit reload timer 2 (ch.4 to ch.7) input pins These pins are available when the 16-bit reload timer 2 (ch.4 to ch.7) input specification is “enabled”. The data on the pin is read as the 16-bit reload timer 2 (ch.4 to ch.7) input (TIN4 to TIN7).
12	P30	E	General-purpose I/O port This port is available in the single-chip mode or when the middle address control register setting is “port.”
	A08		Output pin for external address bus A08 This pin is available in an external-bus mode and when the middle address control register set to “address.”

* : FPT-80P-M06, FPT-80C-C02

(Continued)

Pin no. QFP*	Pin name	Circuit type	Function
13	P31	E	General-purpose I/O port This port is available in the single-chip mode or when the middle address control register setting is “port”, with the 8-bit PPG output is disabled.
	A09		Output pin for external address bus A09 This pin is available in an external-bus mode and when the middle address control register setting is “address.”
	PPG		PPG timer output pin This pin is available when the PPG operation mode control register specification is the PPG output pin.
14 to 17	P32 to P35	E	General-purpose I/O ports These ports are available in the single-chip mode or when the middle address control register setting is “port”, with the 16-bit reload timer 1 (ch.0 to ch.3) output is disabled.
	A10 to A13		Output pins for external address buses A10 to A13 These pins are available in an external-bus mode and when the middle address control register setting is “address.”
	TOUT0 to TOUT3		16-bit reload timer 1 (ch.0 to ch.3) output pin These pins are available when the 16-bit reload timer 1 (ch.0 to ch.3) is output operation.
18	P36	E	General-purpose I/O port This port is available when the UART (ch.2) clock output is disabled either in the single-chip mode or when the middle address control register setting is “port.”
	A14		Output pin for external address bus A14 This pin is available when the UART (ch.2) clock output is disabled in an external-bus mode and when the middle address control register setting is “address.”
	SCK3		UART (ch.2) clock output pin (SCK3) This pin is available when the UART (ch.2) clock output is enabled. UART (ch.2) external clock input pin (SCK3) This pin is available when the port is in input mode and the UART (ch.2) specification is external clock mode.
19	P37	E	General-purpose I/O port This port is available in the single-chip mode or when the middle address control register setting is “port.”
	A15		Output pin for external address bus A15 This pin is available in an external-bus mode and when middle address control register setting is “address.”
	SID3		UART (ch.2) serial data input pin (SID3) Since this input is used whenever the SID3 is in input operation, the output by any other function must be suspended unless the output is intentionally performed.

Pin no. QFP*	Pin name	Circuit type	Function
20	P40	E	General-purpose I/O port This port is available when the UART (ch.2) serial data output from SOD3 is disabled either in the single-chip mode or when the upper address control register setting is “port.”
	A16		Output pin for external address bus A16 This pin is available when the UART (ch.2) serial data output from SOD3 is disabled in an external-bus mode and when the upper address control register setting is “address.”
	SOD3		UART (ch.2) serial data output pin (SOD3) This pin is available when the UART (ch.2) serial data output is enabled.
21	P41	E	General-purpose I/O port This port is available when the UART (ch.2) clock output is disabled either in the single-chip mode or when the upper address control register setting is “port.”
	A17		Output pin for external address bus A17 This pin is available when the UART (ch.2) clock output is disabled in an external-bus mode and when the upper address control register setting is “address.”
	SCK2		UART (ch.2) clock output pin (SCK2) This pin is available when the UART (ch.2) clock output is enabled. UART (ch.2) external clock input pin (SCK2) This pin is available when the port is in input mode and the UART (ch.2) specification is external clock mode.
22	P42	E	General-purpose I/O port This port is available in the single-chip mode or when the upper address control register setting is “port.”
	A18		Output pin for external address bus A18 This pin is available in an external-bus mode and when the upper address control register setting is “address.”
	SID2		UART (ch.2) serial data input pin (SID2) Since this input is used whenever the SID2 is in input operation, the output by any other function must be suspended unless the output is intentionally performed.
23	P43	E	General-purpose I/O port This port is available when the UART (ch.2) serial data output from SOD2 is disabled either in the single-chip mode or when the upper address control register setting is “port.”
	A19		Output pin for external address bus A19 This pin is available when the UART (ch.2) serial data output from SOD2 is disabled in an external-bus mode and when the upper address control register setting is “address.”
	SOD2		UART (ch.2) serial data output pin (SOD2) This pin is available when the UART (ch.2) serial data output from SOD2 is enabled.

* : FPT-80P-M06, FPT-80C-C02

Pin no. QFP*	Pin name	Circuit type	Function
24	PWC0	E	PWC timer input pin Since this input is used whenever the PWC0 timer is in input operation, the output by any other function must be suspended unless the output is intentionally performed.
	POUT0		PWC timer output pin This pin is available when the PWC0 is output operation.
25	P45	E	General-purpose I/O port This port is available in the single-chip mode or when the upper address control register setting is “port.”
	A21		Output pin for external address bus A21 This pin is available in an external-bus mode and when the upper address control register setting is “address.”
	PWC1		PWC timer data sample input pin Since this input is used whenever the PWC1 timer is in input operation, the output by any other function must be suspended unless the output is intentionally performed.
	POUT1		PWC timer output pin This pin is available when the PWC1 is output operation.
26	P46	E	General-purpose I/O port This port is available in the single-chip mode or when the upper address control register setting is “port.”
	A22		Output pin for external address bus A22 This pin is available in an external-bus mode and when the upper address control register setting is “address.”
	PWC2		PWC timer input pin Since this input is used whenever the PWC2 timer is in input operation, the output by any other function must be suspended unless the output is intentionally performed.
	POUT2		PWC timer output pin This pin is available when the PWC2 is output operation.
27	P47	E	General-purpose I/O port This port is available in the single-chip mode or when the upper address control register setting is “port.”
	A23		Output pin for external address bus A23 This pin is available in an external-bus mode and when the upper address control register setting is “address.”
	PWC3		PWC timer input pin Since this input is used whenever the PWC3 timer is in input operation, the output by any other function must be suspended unless the output is intentionally performed.
	POUT3		PWC timer output pin This pin is available when the PWC3 is output operation.

Pin no. QFP*	Pin name	Circuit type	Function
54	P50	E	General-purpose I/O port This port is available in the single-chip mode and when the CLK output is disabled.
	CLK		CLK output pin This pin is available in an external-bus mode with the CLK output enabled.
55	P51	E	General-purpose I/O port This port is available in the single-chip mode or when the ready function is disable.
	RDY		Ready signal input pin This pin is available in an external-bus mode and when the ready function is enabled.
56	P52	E	General-purpose I/O port This port is available in the single-chip mode or when the hold function is disabled.
	$\overline{\text{HAK}}$		Hold acknowledge output pin This pin is available in an external-bus mode and when the hold function is enabled.
57	P53	E	General-purpose I/O port This port is available in the single-chip mode or when the hold function is disabled in an external-bus mode.
	HRQ		Hold request input pin This pin is available in an external-bus mode and when the hold function is enabled. Since this input is used during this operation at any time, the output by any other function must be suspended unless the output is intentionally performed.
58	P54	D	General-purpose I/O port This port is available in the single-chip mode, in the external bus 8-bit mode, or when the $\overline{\text{WRH}}$ pin output is disabled. When these pins are open in input mode, through current may leak in stop mode/reset mode, be sure to fix these pins to V_{CC}/V_{SS} level to use these pins in input mode.
	CTS0		UART (ch.0) clear-to-send input pin Since this input is used whenever the UART (ch.0) CTS function is enabled, the output by any other function must be suspended unless the output is intentionally performed. When these pins are open in input mode, through current may leak in stop mode/reset mode, be sure to fix these pins to V_{CC}/V_{SS} level to use these pins in input mode.
	$\overline{\text{WRH}}$		Write strobe output pin for the upper eight bits of data bus This pin is available in the external bus 16-bit mode with the $\overline{\text{WRH}}$ pin output enabled in an external-bus mode.

* : FPT-80P-M06, FPT-80C-C02

Pin no. QFP*	Pin name	Circuit type	Function
58	INT3	D	External interrupt request input pin Since this input is used whenever external interrupts are enabled, the output by any other function must be suspended unless the output is intentionally performed. When these pins are open in input mode, through current may leak in stop mode/reset mode, be sure to fix these pins to V_{CC}/V_{SS} level to use these pins in input mode.
59	P55	E	General-purpose I/O port This port is available in the single-chip mode or when the $\overline{WRL}$ pin output is disabled.
	$\overline{WRL}$		Write strobe output pin for the lower eight bits of data bus This pin is available in an external-bus mode and when the $\overline{WRL}$ pin output is enabled.
60	P56	E	General-purpose I/O port This port is available in the single-chip mode.
	$\overline{RD}$		Data bus read strobe output pin This pin is available in an external-bus mode.
61	P57	D	General-purpose I/O port This port is always available. When these pins are open in input mode, through current may leak in stop mode/reset mode, be sure to fix these pins to V_{CC}/V_{SS} level to use these pins in input mode.
	$\overline{WI}$		RAM write disable request input Since this input is used during this operation at any time, the output by any other function must be suspended unless the output is intentionally performed. When these pins are open in input mode, through current may leak in stop mode/reset mode, be sure to fix these pins to V_{CC}/V_{SS} level to use these pins in input mode.
32, 33, 35 to 40	P60, P61, P62 to P67	C	Open-drain I/O ports These ports are available when the analog input enable register setting is “port.”
	AN0, AN1, AN2 to AN7		10-bit A/D converter analog input pins These pins are available when the analog input enable register setting is “analog input.”
41 to 43	MD0 to MD2	F	Operation mode select signal input pins Connect these pins directly to V_{CC} or V_{SS}.
44	$\overline{HST}$	G	Hardware standby input pin
45	P70	E	General-purpose I/O port This port is available when the UART (ch.1) clock output is disabled.

Pin no. QFP*	Pin name	Circuit type	Function
45	SCK1	E	UART (ch.1) clock output pin This pin is available when the UART (ch.1) clock output is enabled. UART (ch.1) external clock input pin This pin is available when the port is in input mode and the UART (ch.1) specification is external clock mode.
46	P71	E	General-purpose I/O port This port is always available.
	SID1		UART (ch.1) serial data input pin Since this input is used whenever the UART (ch.1) is in input operation, the output by any other function must be suspended unless the output is intentionally performed.
47	P72	E	General-purpose I/O port This port is available when the UART (ch.1) serial data output is disabled.
	SOD1		UART (ch.1) serial data output pin This pin is available when the UART (ch.1) serial data output is enabled.
48	P73	E	General-purpose I/O port This port is available when the UART (ch.0) clock output is disabled.
	SCK0		UART (ch.0) clock output pin This pin is available when the UART (ch.0) clock output is enabled. UART (ch.0) external clock input pin This pin is available when the port is in input mode and the UART (ch.0) specification is external clock mode.
49	P74	E	General-purpose I/O port This port is always available.
	SID0		UART (ch.0) serial data input pin Since this input is used whenever the UART (ch.0) is in input operation, the output by any other function must be suspended unless the output is intentionally performed.
50	P75	E	General-purpose I/O port This port is available when the UART (ch.0) serial data output is disabled.
	SOD0		UART (ch.0) serial data output pin This pin is available when the UART (ch.0) serial data output is enabled.
51, 52	P80, P81	D	General-purpose I/O port This port is always available. When these pins are open in input mode, through current may leak in stop mode/reset mode, be sure to fix these pins to V_{CC}/V_{SS} level to use these pins in input mode.

(Continued)

Type	Circuit	Remarks
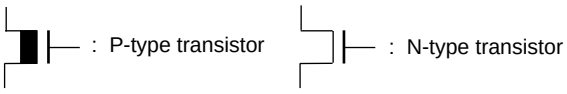
E		• CMOS-level output • CMOS-level hysteresis input Standby control provided MB90214: With or without pull-up/pull-down reisistor optional MB90P214A/P214B: Without pull-up/pull-down resistor MB90W214A/W214B: Without pull-up/pull-down resistor
F		• CMOS-level input with no standby control Mask ROM products only: MD2: With pull-down resistor MD1: With pull-up resistor MD0: With pull-down resistor
		• COMS-level input with no standby control MD2 of OTPROM products/EPROM products only
G		• CMOS-level hysteresis input Standby control not provided • With input analog filter (40 ns Typ.)
H		• CMOS-level hysteresis input Standby control not provided • With input analog filter (40 ns Typ.) • With pull-up resistor MB90214: With or without pull-up/pull-down resistor optional MB90P214A/W214A/P214B/W214B: With pull-up resistor



Note: The pull-up and pull-down resistors are always connected, regardless of the state.

■ HANDLING DEVICES

1. Preventing Latchup

CMOS ICs may cause latchup when a voltage higher than V_{CC} or lower than V_{SS} is applied to input or output pins, or when a voltage exceeding the rating is applied between V_{CC} and V_{SS}.

If latch-up occurs, the power supply current increases rapidly, sometimes resulting in thermal breakdown of the device. Use meticulous care not to let any voltage exceed the maximum rating.

Also, take care to prevent the analog power supply (AV_{CC} and AVRH) and analog input from exceeding the digital power supply (V_{CC}) when the analog system power supply is turned on and off.

2. Treatment of Unused Input Pins

Leaving unused input pins open could cause malfunctions. They should be connected to a pull-up or pull-down resistor.

3. Treatment of Pins when A/D is not Used

Connect to be AV_{CC} = AVRH = V_{CC} and AV_{SS} = AVRL = V_{SS} even if the A/D converter is not in use.

4. Precautions when Using an External Clock

To reset the internal circuit properly by the Low-level input to the $\overline{RST}$ pin, the “L” level input to the $\overline{RST}$ pin must be maintained for at least five machine cycles. Pay attention to it if the chip uses external clock input.

5. V_{CC} and V_{SS} Pins

Apply equal potential to the V_{CC} and V_{SS} pins.

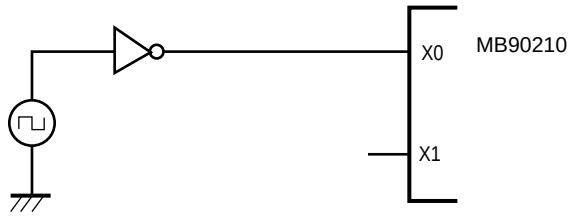
6. Supply Voltage Variation

The operation assurance range for the V_{CC} supply voltage is as given in the ratings. However, sudden changes in the supply voltage can cause misoperation, even if the voltage remains within the rated range. Therefore, it is important to supply a stable voltage to the IC. The recommended power supply control guidelines are that the commercial frequency (50 to 60 Hz) ripple variation (P-P value) on V_{CC} should be less than 10% of the standard V_{CC} value and that the transient rate of change during sudden changes, such as during power supply switching, should be less than 0.1 V/ms.

7. Notes on Using an External Clock

When using an external clock, drive the X0 pin as illustrated below. When an external clock is used, oscillation stabilization time is required even for power-on reset and wake-up from stop mode.

- **Use of External Clock**



Note: When using an external clock, be sure to input external clock more than 6 machine cycles after setting the $\overline{HST}$ pin to “L” to transfer to the hardware standby mode.

8. Power-on Sequence for A/D Converter Power Supplies and Analog Inputs

Be sure to turn on the digital power supply (V_{CC}) before applying voltage to the A/D converter power supplies (AV_{CC}, AVRH, and AVRL) and analog inputs (AN0 to AN7).

When turning power supplies off, turn off the A/D converter power supplies (AV_{CC}, AVRH, and AVRL) and analog inputs (AN0 to AN7) first, then the digital power supply (V_{CC}).

When turning AVRH on or off, be careful not to let it exceed AV_{CC}.

■ PROGRAMMING FOR MB90P214A/P214B/W214A/W214B

In EPROM mode, the MB90P214A/P214B/W214A/W214B functions equivalent to the MBM27C1000. This allows the EPROM to be programmed with a general-purpose EPROM programmer by using the dedicated socket adapter (do not use the electronic signature mode).

1. Program Mode

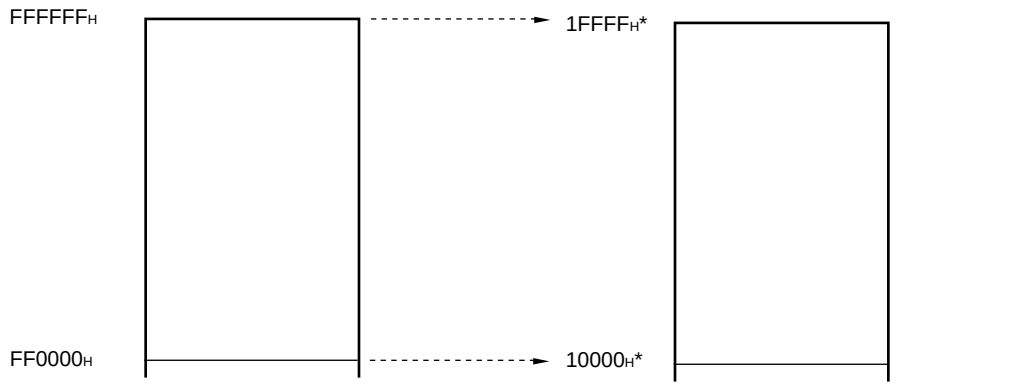
When shipped from Fujitsu, and after each erasure, all bits (64 K × 8 bits) in the MB90P214A/P214B/W214A/W214B are in the “1” state. Data is written to the ROM by selectively programming “0’s” into the desired bit locations. Bits cannot be set to “1” electrically.

2. Programming Procedure

(1) Set the EPROM programmer to MBM27C1000.

(2) Load program data into the EPROM programmer at 10000_H to $1FFFF_H$.

Note that ROM addresses $FF0000_H$ to $FFFFFF_H$ in the operation mode in the MB90P214A/P214B/W214A/W214B series assign to 10000_H to $1FFFF_H$ in the EPROM mode (on the EPROM programmer).



* : Be sure to set the programming, the start address and the stop address on the EPROM programmer to 10000_H/$1FFFF_H$.

(3) Mount the MB90P214A/P214B/W214A/W214B on the adapter socket, then fit the adapter socket onto the EPROM programmer. When mounting the device and the adapter socket, pay attention to their mounting orientations.

(4) Start programming the program data to the device.

(5) If programming has not successfully resulted, connect a capacitor of approx. 0.1 µF between V_{CC} and GND, between V_{PP} and GND.

(6) Since the MB90P214A and MB90W214A have CMOS-level input, programming to them may be impossible depending on the output level of the general-purpose programmer. In that case, connect a pull-up resistor to the adapter socket side.

Note: The mask ROM products (MB90214) does not support EPROM mode. Data cannot, therefore, be read by the EPROM programmer.

3. EPROM Programmer Socket Adapter and Recommended Programmer Manufacturer

Part No.			MB90P214B
Package			QFP-80
Compatible socket adapter Sun Hayato Co., Ltd.			ROM-80QF-32DP-16F
Recommended programmer manufacturer and programmer name	**Advantest corp.**	**R4945A (main unit) + R49451A (adapter)**	Recommended

Inquiry: Sun Hayato Co., Ltd.: TEL: (81)-3-3986-0403
FAX: (81)-3-5396-9106
Advantest Corp.: TEL: Except JAPAN (81)-3-3930-4111

4. Erase Procedure

Data written in the MB90W214A/W214B are erased (from “0” to “1”) by exposing the chip to ultraviolet rays with a wavelength of 2,537 Å through the translucent cover.

Recommended irradiation dosage for exposure is 10 Wsec/cm^2. This amount is reached in 15 to 20 minutes with a commercial ultraviolet lamp positioned 2 to 3 cm above the package (when the package surface illuminance is 1200 μW/cm^2).

If the ultraviolet lamp has a filter, remove the filter before exposure. Attaching a mirrored plate to the lamp increases the illuminance by a factor of 1.4 to 1.8, thus shortening the required erasure time. If the translucent part of the package is stained with oil or adhesive, transmission of ultraviolet rays is degraded, resulting in a longer erasure time. In that case, clean the translucent part using alcohol (or other solvent not affecting the package).

The above recommended dosage is a value which takes the guard band into consideration and is a multiple of the time in which all bits can be evaluated to have been erased. Observe the recommended dosage for erasure; the purpose of the guard band is to ensure erasure in all temperature and supply voltage ranges. In addition, check the life span of the lamp and control the illuminance appropriately.

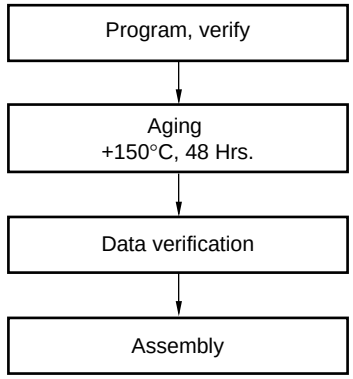
Data in the MB90W214A/W214B are erased by exposure to light with a wavelength of 4000 Å or less.

Data in the device is also erased even by exposure to fluorescent lamp light or sunlight although the exposure results in a much lower erasure rate than exposure to 2537 Å ultraviolet rays. Note that exposure to such lights for an extended period will therefore affect system reliability. If the chip is used where it is exposed to any light with a wavelength of 4000 Å or less, cover the translucent part, for example, with a protective seal to prevent the chip from being exposed to the light.

Exposure to light with a wavelength of 4,000 to 5,000 Å or more will not erase data in the device. If the light applied to the chip has a very high illuminance, however, the device may cause malfunction in the circuit for reasons of general semiconductor characteristics. Although the circuit will recover normal operation when exposure is stopped, the device requires proper countermeasures for use in a place exposed continuously to such light even though the wavelength is 4,000 Å or more.

5. Recommended Screening Conditions

High temperature aging is recommended as the pre-assembly screening procedure.



6. Programming Yeild

MB90P214A/P214B cannot be write-tested for all bits due to their nature. Therefore the write yield cannot always be guaranteed to be 100%.

7. Pin Assignment in EPROM Mode

■ PERIPHERAL RESOURCES

1. Parallel Ports

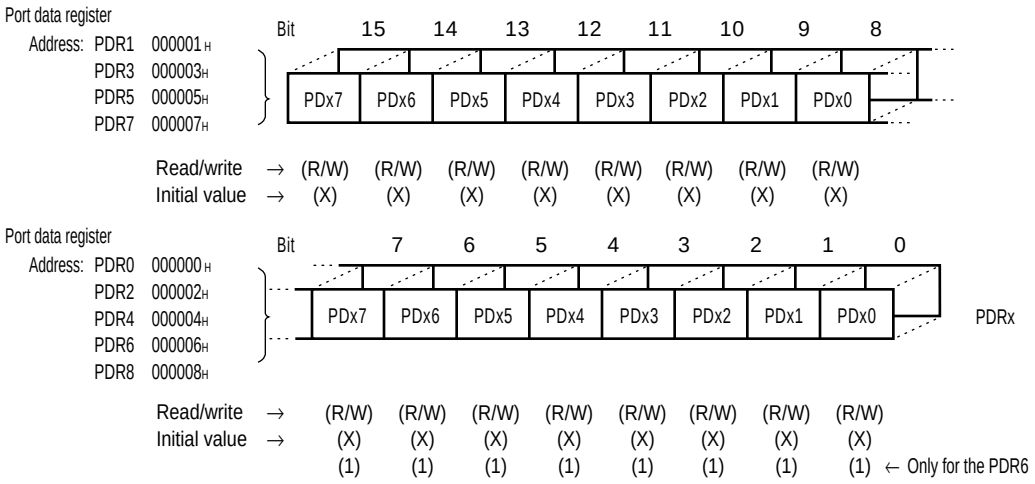
The MB90210 series has 57 I/O pins and 8 open-drain I/O pins.

Ports 0 to 5, 7, and 8 are I/O ports. Each of these ports serves as an input port when the data direction register value is 0 and as an output port when the value is 1.

Port 6 is an open-drain port, which may be used as a port when the analog input enable register value is 0.

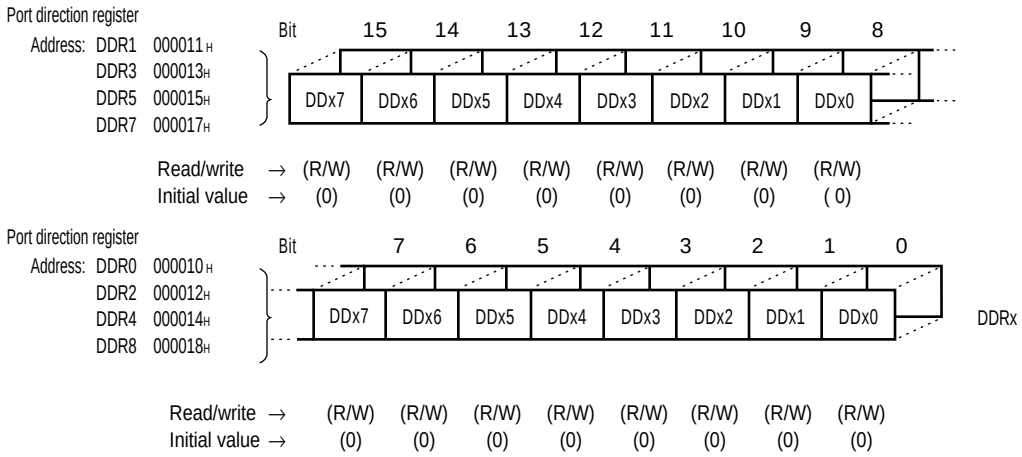
(1) Register Configuration

- **Port data registers 0 to 8 (PDR0 to PDR8)**



Note: No register bit is included in bits 7 and 6 of port 7 or bits 7 to 3 of port 8.

- **Port direction registers 0 to 5, 7, and 8 (DDR0 to DDR5, DDR7, and DDR8)**



Note: No register bit is included in bits 7 and 6 of port 7 or bits 7 to 3 of port 8.
Port 6 has no DDR.

- **Analog input enable register (ADER)**

Analog input enable register

Address: ADER 000016H

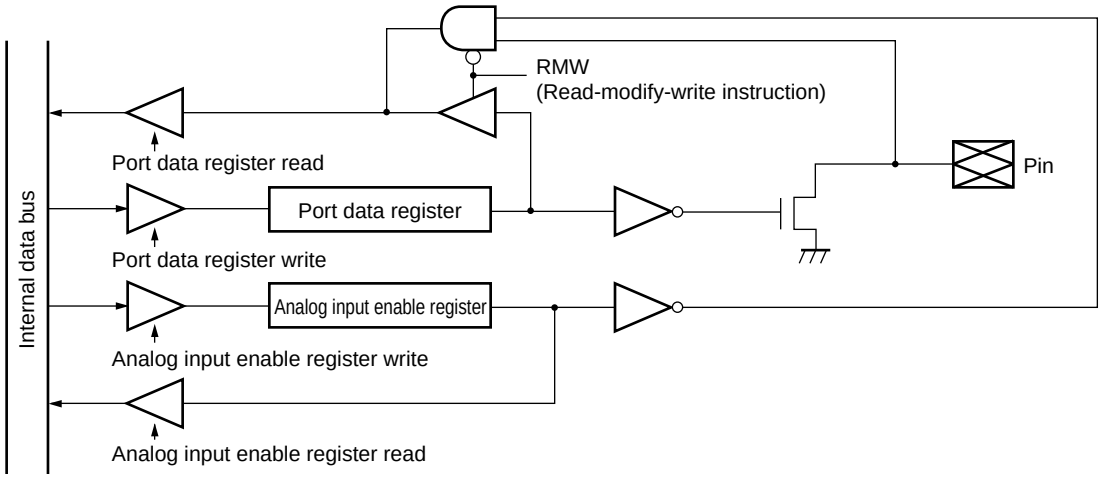
- **I/O port with an open-drain output (Port 6)**



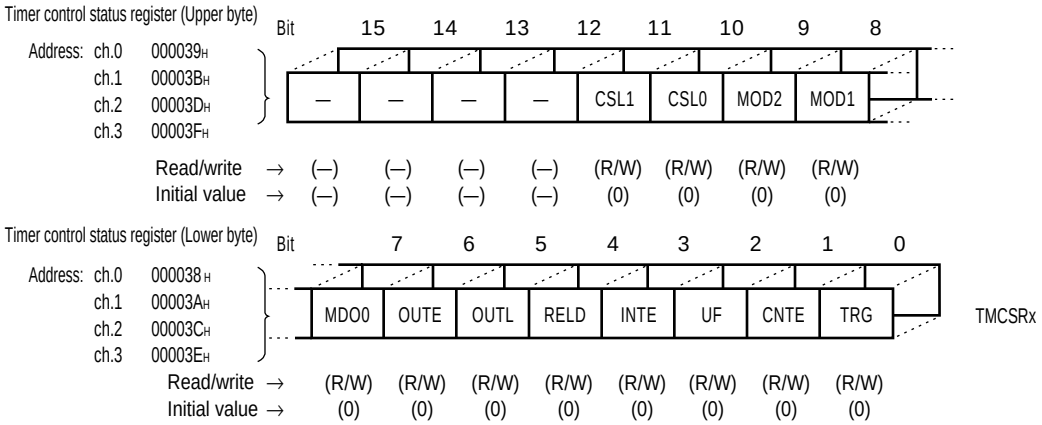
2. 16-bit Reload Timer 1 (with Event Count Function)

The 16-bit reload timer 1 consists of a 16-bit down counter, a 16-bit reload register, an input pin (TIN), an output pin (TOUT), and a control register. The input clock can be selected from among three internal clocks and one external clock. At the output pin (TOUT), the pulses in the toggled output waveform are output in the reload mode; the rectangular pulses indicating that the timer is counting are in the single-shot mode. The input pin (TIN) can be used for event input in the event count mode, and for trigger input or gate input in the internal clock mode.

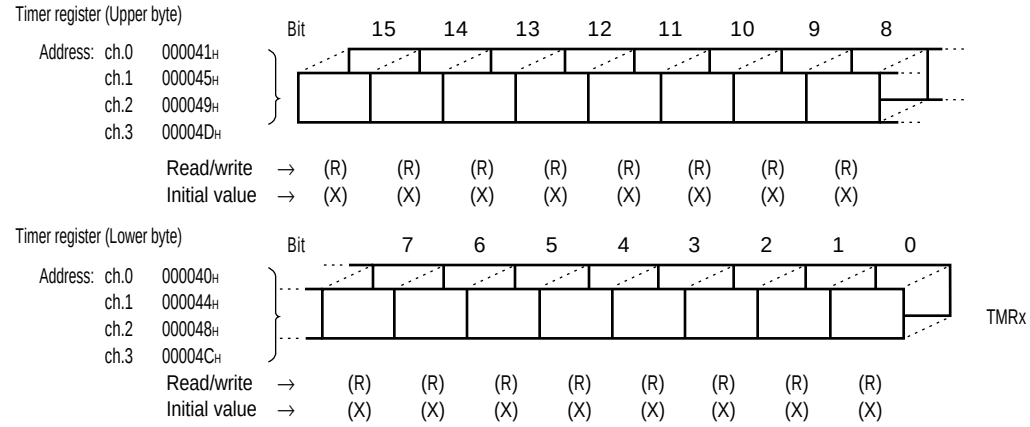
MB90210 series contains four channels for this timer.

(1) Register Configuration

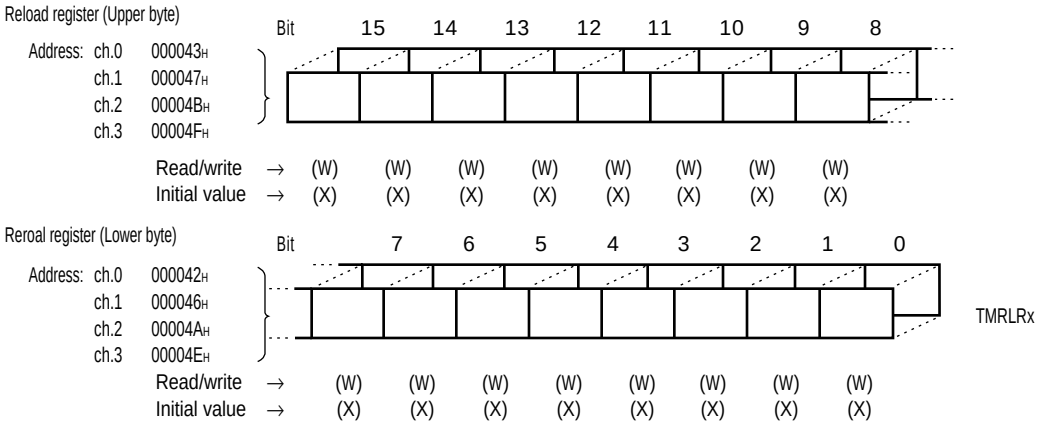
- **Timer control status register (TMCSR)**



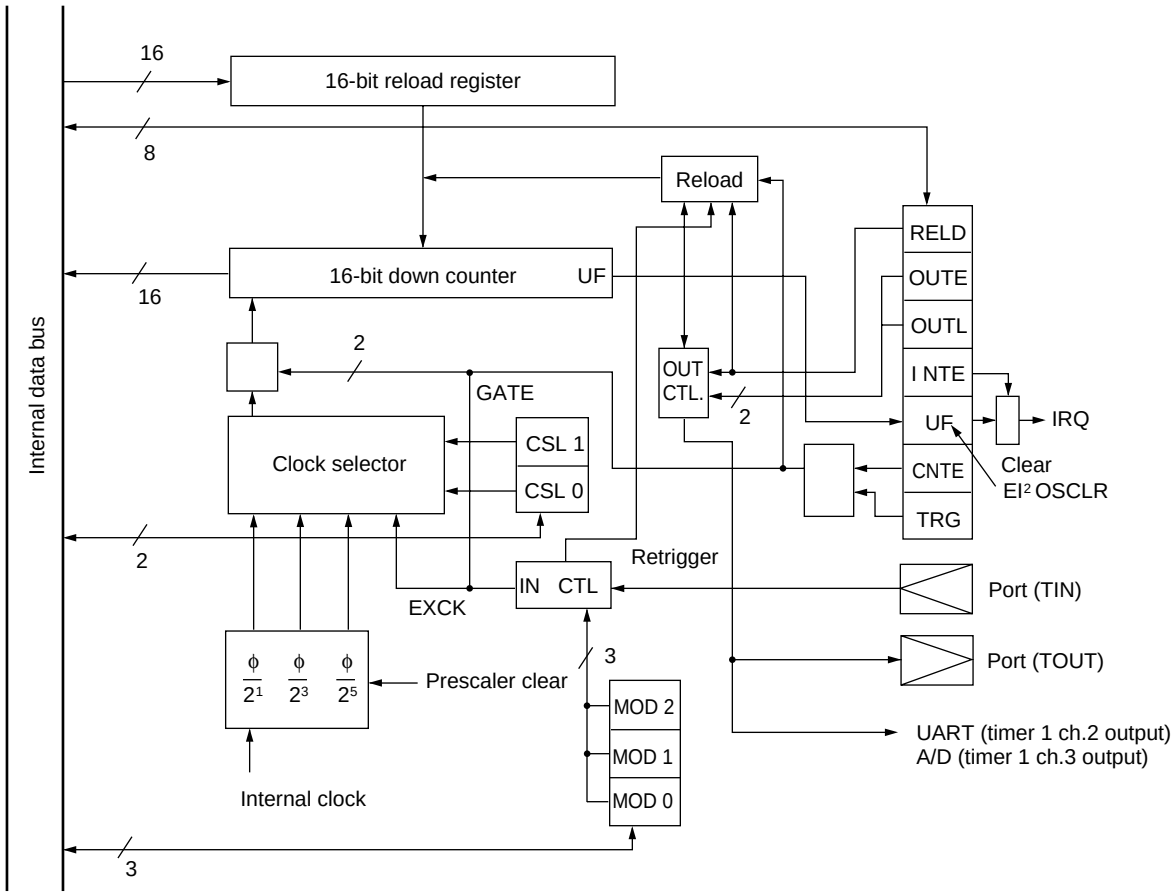
- **Timer register (TMR)**



- **Reload register (TMRLR)**



(2) Block Diagram



3. 16-bit Reload Timer 2 (with Gate Mode)

The 16-bit reload timer 2 consists of a 16-bit down counter, a 16-bit reload register, an input pin (TIN), and an 8-bit control register. The input clock can be selected from among four internal clocks.

The MB90210 series contains four channels for this timer.

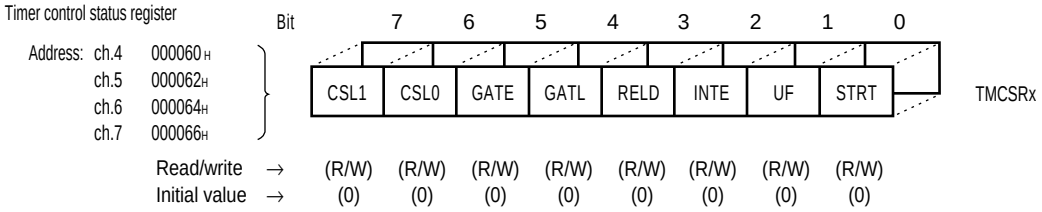
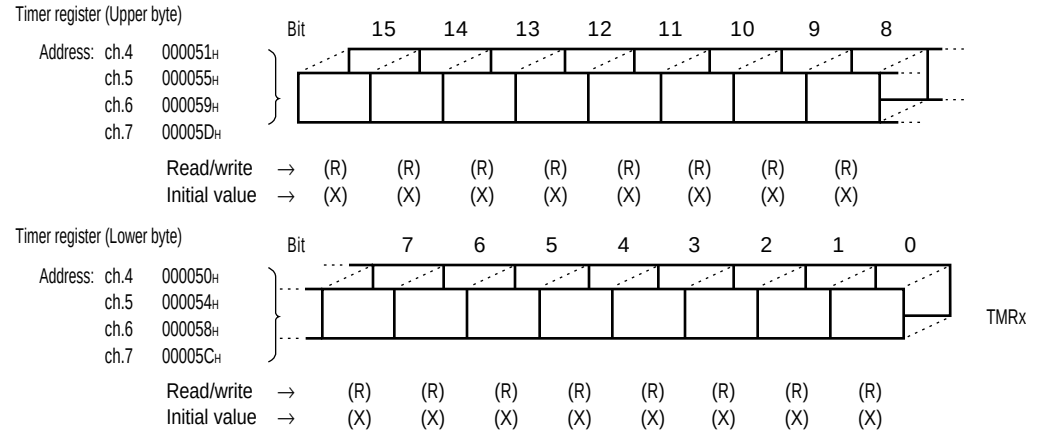
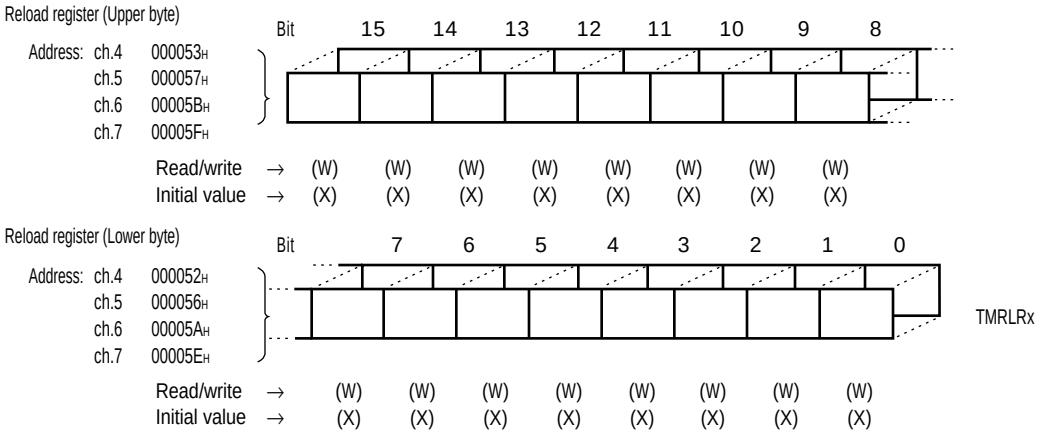
- **Timer control status register (TMCSR)**



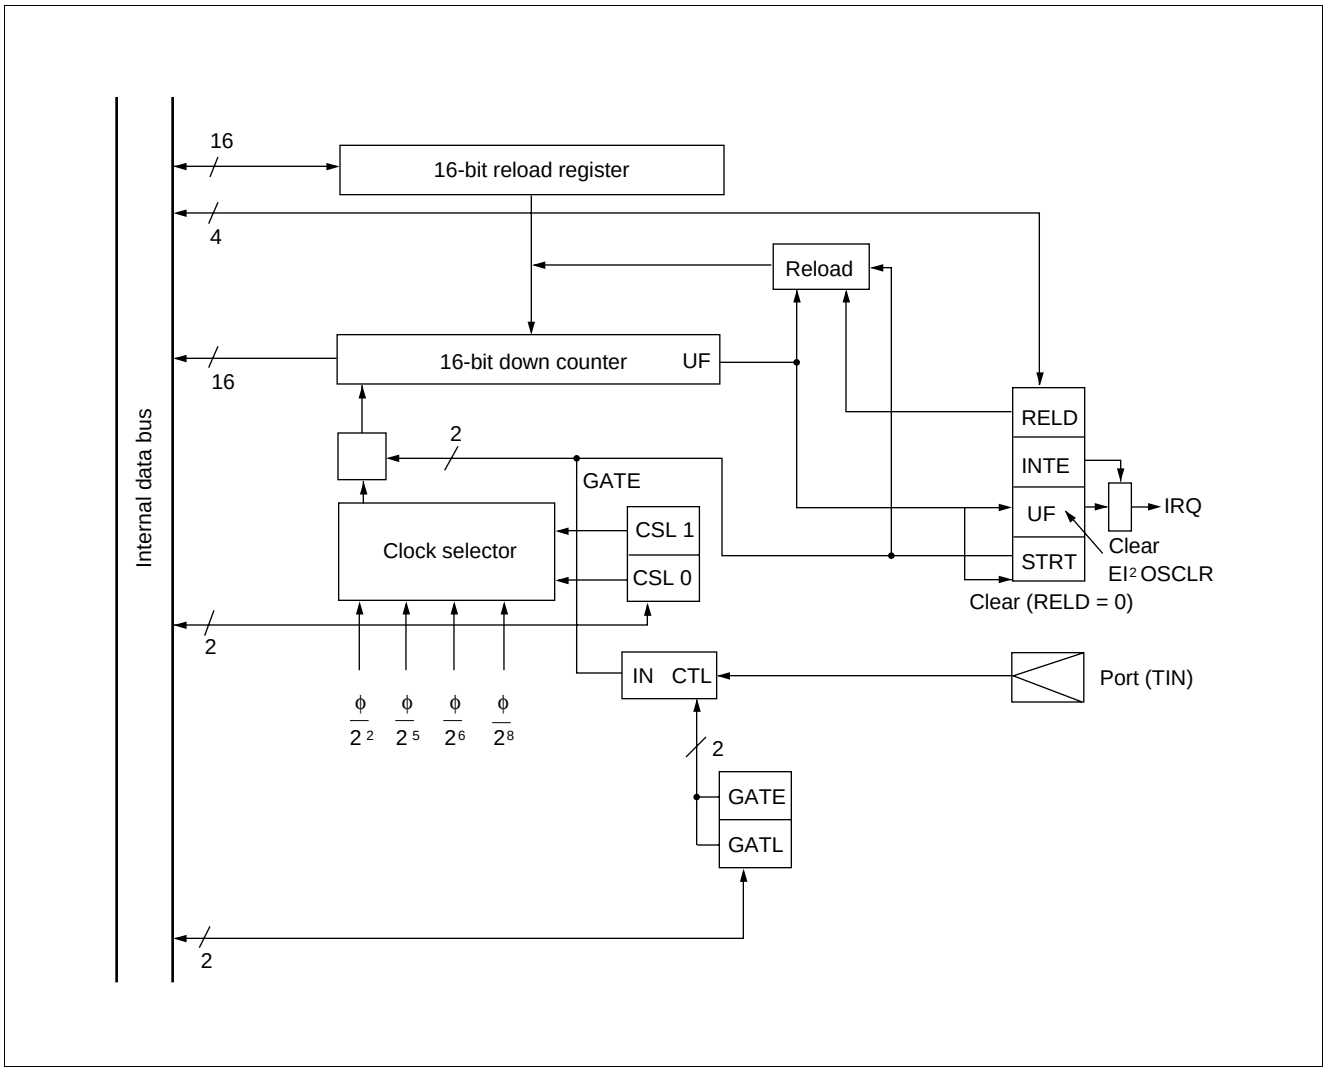
- **Timer register (TMR)**



- **Reload register (TMRLR)**



(2) Block Diagram



4. UART

The UART is a serial I/O port for synchronous or asynchronous communication with external resources. It has the following features:

- Full duplex double buffer
- Data transfer synchronous or asynchronous with clock pulses
- Multiprocessor mode support (Mode 2)
- Built-in dedicated baud-rate generator (Nine types)
- Arbitrary baud-rate setting from external clock input or internal timer
  (Use the 16-bit reroad timer 1 channel 2 for internal timer.)
- Variable data length (7 to 9 bits (without parity bit); 6 to 8 bits (with parity bit))
- Variable data length (7 to 9 bit no parity, 6 to 8 bit with parity)
- Error detection function (Framing, overrun, parity)
- Interrupt function (Two sources for transmission and reception)
- Transfer in NRZ format

The MB90210 series contains three channels for the UART.
UART channel 0 has the CTS function.
UART channel 2 provides dual I/O pin switching.

5. 10-bit A/D Converter

The 10-bit A/D converter converts the analog input voltage to a digital value. It has the following features:

- Conversion time: min.6.125 µs per channel (at 16-MHz machine clock)
- RC-type successive approximation with built-in sample-and-hold circuit
- 10-bit or 8-bit resolution
- Eight analog input channels programmable for selection
  Single conversion mode: Selects and converts one channel.
  Scan conversion mode: Converts multiple consecutive channels (up to eight channels programmable).
  Consecutive conversion mode: Converts a specified channel repeatedly.
  Stop conversion mode: Converts one channel and suspends its own operation until the next activation (allowing synchronized conversion start).
- On completion of A/D conversion, the converter can generate an interrupt request to the CPU. This interrupt generation can activate the EI^{2}OS to transfer the A/D conversion result to memory, making the converter suitable for continuous operation.
- Conversion can be activated by software, external trigger (falling edge), and/or timer (rising edge) as selected. Use the 16-bit reload timer 1 channel 3 for the timer.

(1) Register Configuration

- **A/D Control status register (ADCS1 and ADCS0)**

6. PWC(Pulse Width Count) Timer

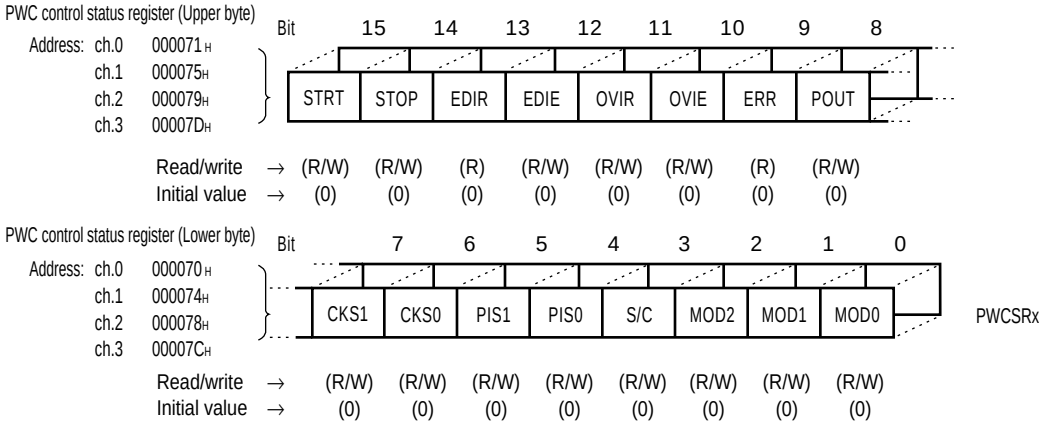
The PWC (pulse width count) timer is a 16-bit multifunction up-count timer with an input-signal pulse-width count function and a reload timer function. The hardware configuration of this module is a 16-bit up-count timer, an input pulse divider with divide ratio control register, four count input pins, and a 16-bit control register. Using these components, the PWC timer provides the following features:

- Timer functions: An interrupt request can be generated at set time intervals.
  Pulse signals synchronized with the timer cycle can be output.
  The reference internal clock can be selected from among three internal clocks.
- Pulse-width count functions: The time between arbitrary pulse input events can be counted.
  The reference internal clock can be selected from among three internal clocks.
  Various count modes:
  "H" pulse width (↑ to ↓) /"L" pulse width (↑ to ↓)
  Rising-edge cycle (↑ to ↑) /Falling-edge cycle (↓ to ↓)
  Count between edges (↑ or ↓ to ↓ or ↑)
  Cycle count can be performed by 22n division (n = 1, 2, 3, 4) of the input pulse, with an 8 bit input divider.
  An interrupt request can be generated once counting has been performed.
  The number of times counting is to be performed (once or subsequently) can be selected.

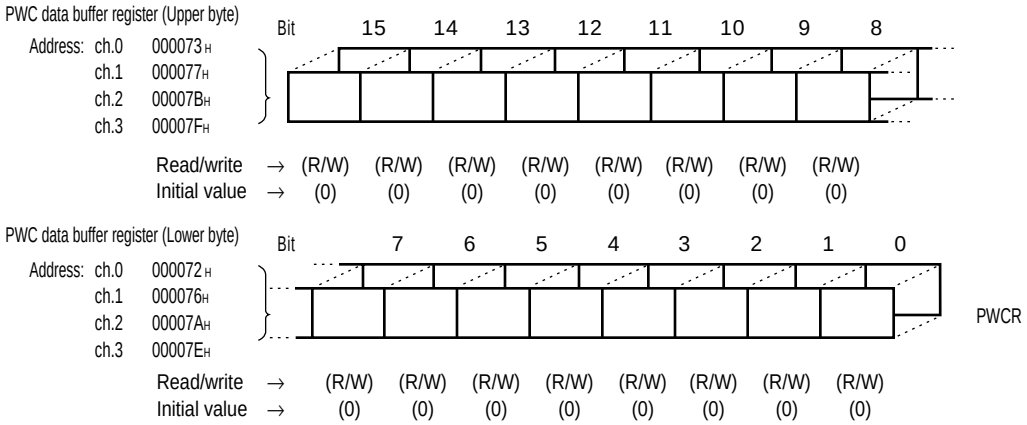
The MB90210 series contains four channels for the PWC timer.

(1) Register Configuration

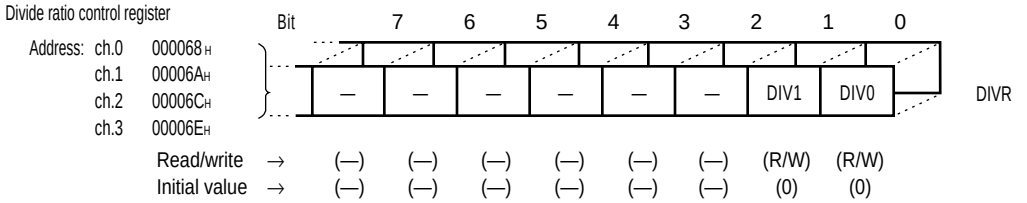
- **PWC control status register (PWCSR)**



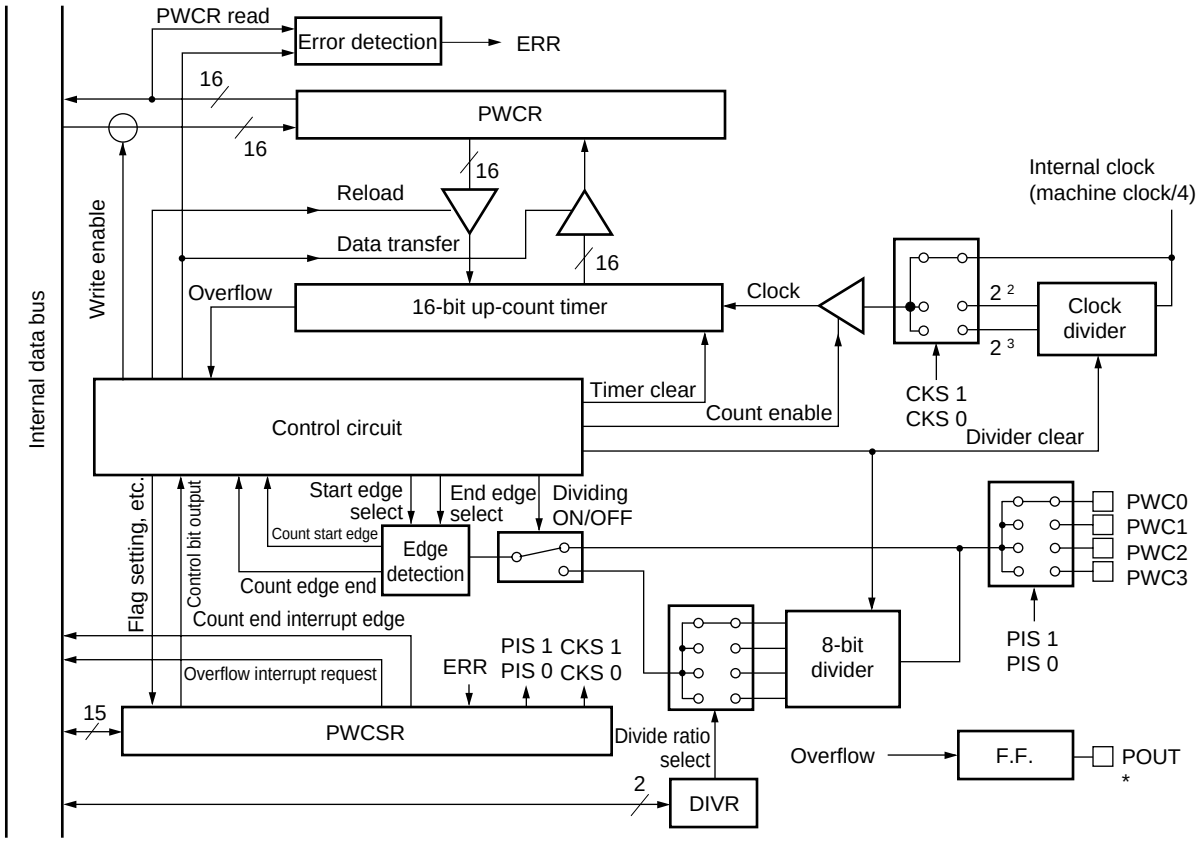
- **PWC data buffer register (PWCR)**



- **PWC divide ratio control register (DIVR)**



(2) Block Diagram



* : The POUT pins of the MB90210 series are assigned as follows:

Channel		POUT pin
PWC	ch.0	P44/A20/PWC0/POUT0
PWC	ch.1	P45/A21/PWC1/POUT1
PWC	ch.2	P46/A22/PWC2/POUT2
PWC	ch.3	P47/A23/PWC3/POUT3

7. 8-bit PPG Timer

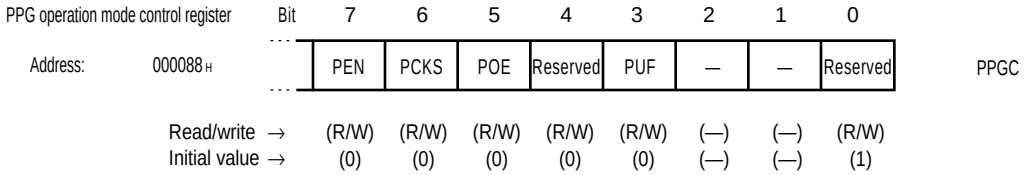
This block is an 8-bit reload timer module for PPG output by controlling pulse output according to the timer operation.

The hardware configuration of this block is an 8-bit down counter, two 8-bit reload registers, an 8-bit control register, and an external pulse output pin. Using these components, the module provides the following features:

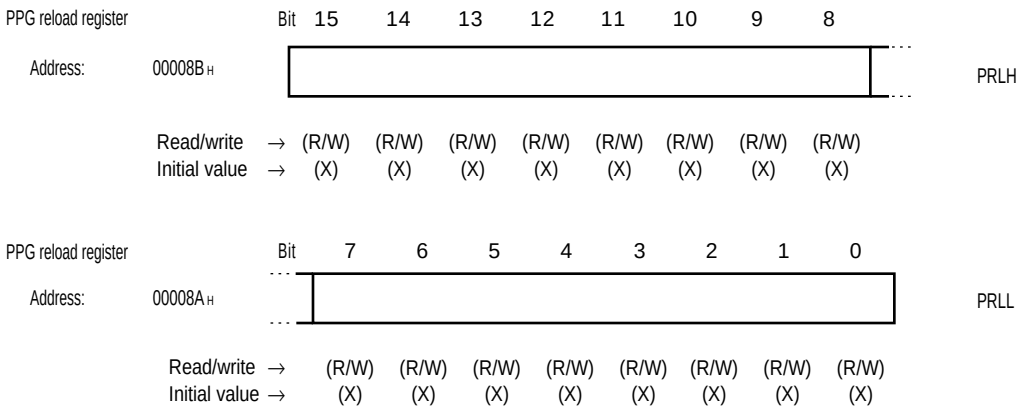
PPG output operation: The module outputs pulse waves of any period and duty factor. It can also be used as a D/A converter using an external circuit.

(1) Register Configuration

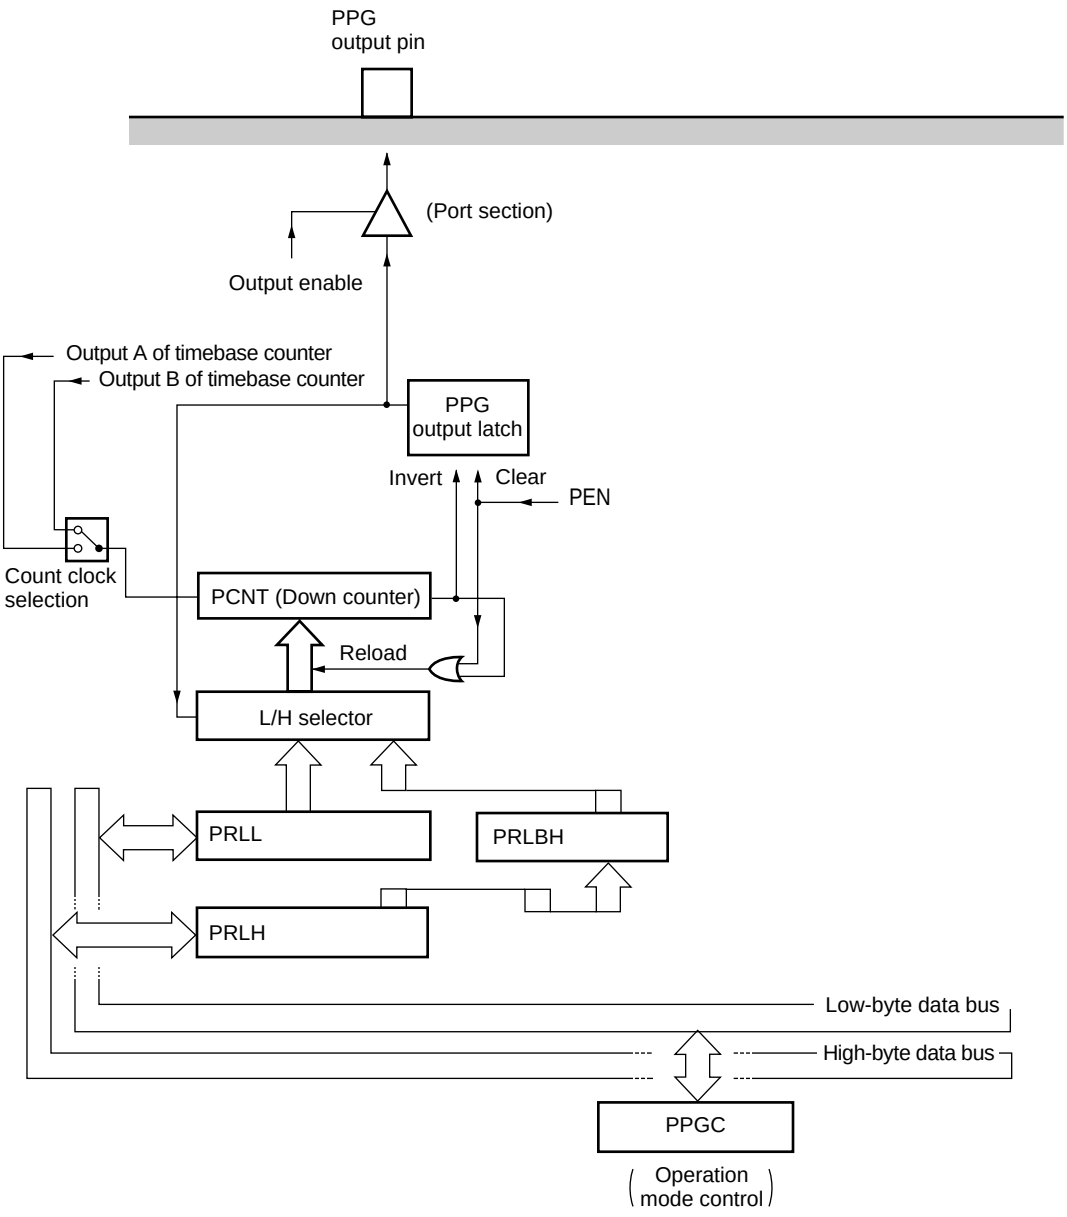
- **PPG operation mode control register (PPGC)**



- **PPG reload registers (PRLL and RRLH)**



(2) Block Diagram



8. DTP/External Interrupt

The data transfer peripheral (DTP) is located between external peripherals and the F²MC-16F CPU. It receives a DMA request or an interrupt request generated by the external peripherals and reports it to the F²MC-16F CPU to activate the extended intelligent I/O service or interrupt handler. The user can select two request levels of “H” and “L” for extended intelligent I/O service or, and four request levels of “H,” “L,” rising edge and falling edge for external interrupt requests.

(1) Register Configuration

- **Interrupt/DTP enable register (ENIR)**

Interrupt/DTP enable register — Address: 000030H

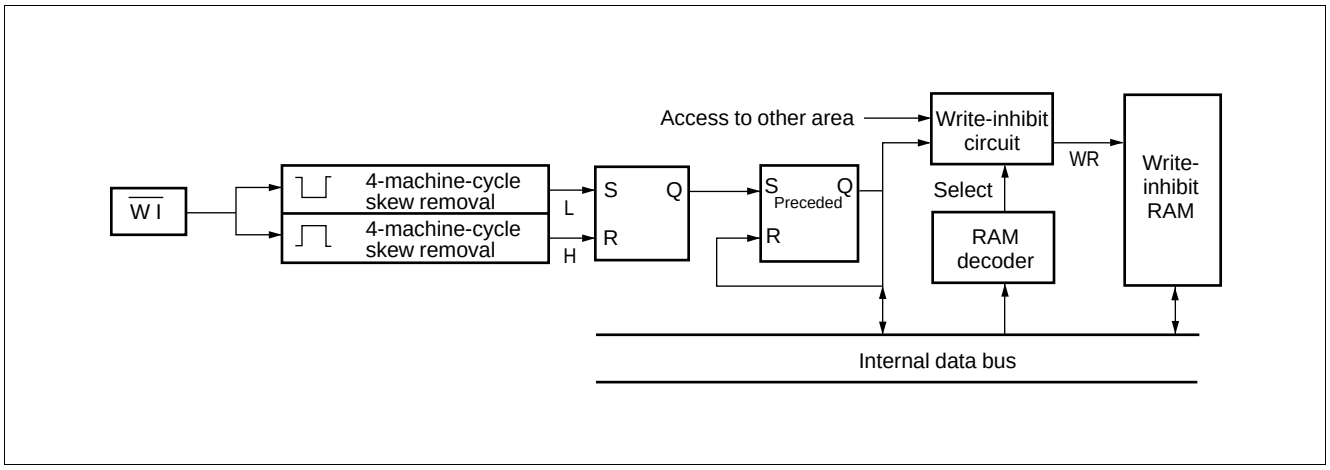
(3) Block Diagram



12. Low-power Consumption Modes, Oscillation Stabilization Delay Time, and Gear Function

The MB90210 series has three low-power consumption modes: the sleep mode, the stop mode, the hardware standby mode, and gear function.

Sleep mode is used to suspend only the CPU operation clock; the other components remain in operation. Stop mode and hardware standby mode stop oscillation, minimizing the power consumption while holding data.

The clock gear function divides the external clock frequency, which is used usually as it is, to provide a lower machine clock frequency. This function can therefore lower the overall operation speed without changing the oscillation frequency. The function can select the machine clock as a division of the frequency of crystal oscillation or external clock input by 1, 2, 4, or 16.

The OSC1 and OSC0 bits can be used to set the oscillation stabilization delay time for wake-up from stop mode or hardware standby mode.

(1) Register Configuration

- **Standby control register (STBYC)**

Standby control register

Address: 0000A0H

“H” level output current	I_{OH}	*2	—	–10	mA	Rush current
“H” level total output current	ΣI_{OH}	*2	—	–48	mA	Total output current
Power consumption	Pd	—	—	650	mW	
Operating temperature	T_A	—	–40	+105	°C	MB90214/P214B/W214B
			–40	+85	°C	MB90P214A/W214A
Storage temperature	Tstg	—	–55	+150	°C	

*1: V_I and V_O must not exceed V_{CC} + 0.3 V.
*2: Output pins
P00 to P07, P10 to P17, P20 to P27, P30 to P37, P40 to P47, P50 to P57, P70 to P75, P80 to P82
*3: Output pins
P00 to P07, P10 to P17, P20 to P27, P30 to P37, P40 to P47, P50 to P57, P60 to P67, P70 to P75, P80 to P82

WARNING: Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

2. Recommended Operating Conditions

(V_{SS} = AV_{SS} = 0.0 V)

Parameter	Symbol	Pin name	Value		Unit	Remarks
			Min.	Max.		
Power supply voltage	V_{CC}	V_{CC}	4.5	5.5	V	When operating
			3.0	5.5	V	Retains the RAM state in stop mode
Analog power supply voltage	AV_{CC}	AV_{CC}	4.5	V_{CC} + 0.3	V	Power supply voltage for A/D converter
	AVRH	AVRH	AVRL	AV_{CC}	V	Reference voltage for A/D converter
	AVRL	AVRL	AV_{SS}	AVRH	V	
Clock frequency	F_C	—	10	16	MHz	
Operating temperature	T_A*	—	–40	+105	°C	Single-chip mode MB90214/P214B/W214B
			–40	+85	°C	Single-chip mode MB90P214A/W214A
			–40	+70	°C	External bus mode

* : Excluding the temperature rise due to the heat produced.

WARNING: Recommended operating conditions are normal operating ranges for the semiconductor device. All the device's electrical characteristics are warranted when operated within these ranges.

Always use semiconductor devices within the recommended operating conditions. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their FUJITSU representative beforehand.

3. DC Characteristics

Single-chip mode MB90214/P214B/W214B : (V_{CC} = +4.5 V to +5.5 V, V_{SS} = 0.0 V, T_A = –40°C to +105°C)
MB90P214A/W214A : (V_{CC} = +4.5 V to +5.5 V, V_{SS} = 0.0 V, T_A = –40°C to +85°C)
External bus mode : (V_{CC} = +4.5 V to +5.5 V, V_{SS} = 0.0 V, T_A = –40°C to +70°C)

Parameter	Symbol	Pin name	Condition	Value			Unit	Remarks
				Min.	Typ.	Max.		
"H" level input voltage	V_{IH}	*1	—	0.7 V_{CC}	—	V_{CC} + 0.3	V	CMOS level input
	V_{IHS}	*2	—	0.8 V_{CC}	—	V_{CC} + 0.3	V	Hysteresis input
	V_{IHM}	MD0 to MD2	—	V_{CC} – 0.3	—	V_{CC} + 0.3	V

*9: Measurement condition of power supply current; external clock pin and output pin are open. Measurement condition of V_{CC}; see the table above mentioned.

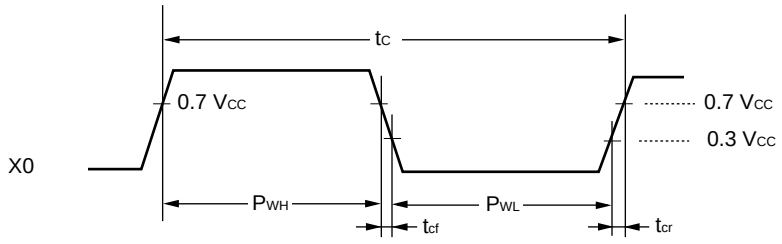
2. AC Characteristics

(1) Clock Timing Standards

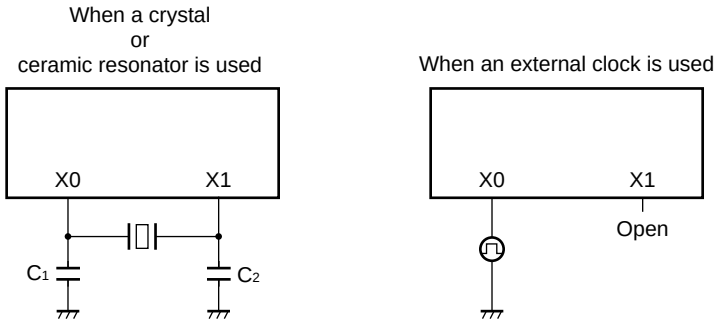
Single-chip mode MB90214/P214B/W214B : (V_{CC} = +4.5 V to +5.5 V, V_{SS} = 0.0 V, T_A = –40°C to +105°C)
MB90P214A/W214A : (V_{CC} = +4.5 V to +5.5 V, V_{SS} = 0.0 V, T_A = –40°C to +85°C)
External bus mode : (V_{CC} = +4.5 V to +5.5 V, V_{SS} = 0.0 V, T_A = –40°C to +70°C)

Parameter	Symbol	Pin name	Condition	Value			Unit	Remarks
				Min.	Typ.	Max.		
Clock frequency	F_C	X0, X1	—	10	—	16	MHz	
Clock cycle time	t_C	X0, X1	—	62.5	—	100	ns	$1/F_C$
Input clock pulse width	P_{WH} P_{WL}	X0	—	0.4 t_C	—	0.6 t_C	ns	Duty ratio: 60%
Input clock rising/falling time	t_{cr} t_{cf}	X0	—	—	—	8	ns	t_{cr} + t_{cf}

• **Clock Input Timings**

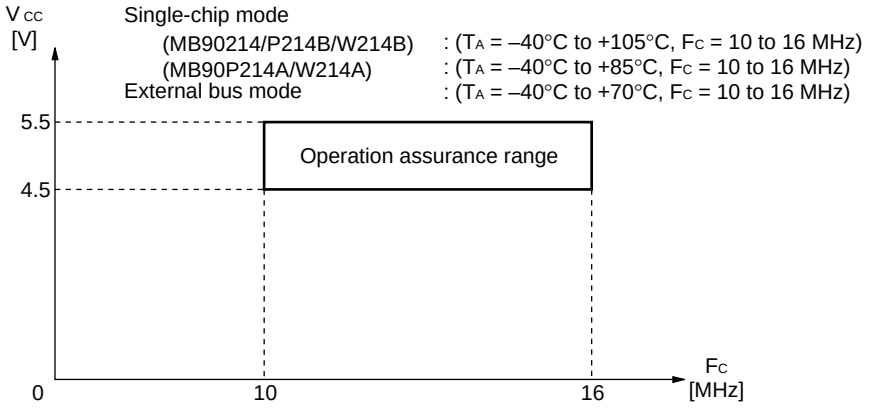


• **Clock Conditions**



C_1 = C_2 = 10 pF
Select the optimum capacity value for the resonator.

• **Relationship between Clock Frequency and Power Supply Voltage**

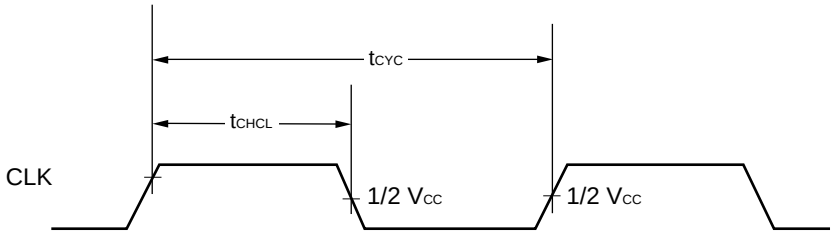


(2) Clock Output Timing Standards

External mode: (V_{CC} = +4.5 to +5.5 V, V_{SS} = 0.0 V, T_A = –40°C to +70°C)

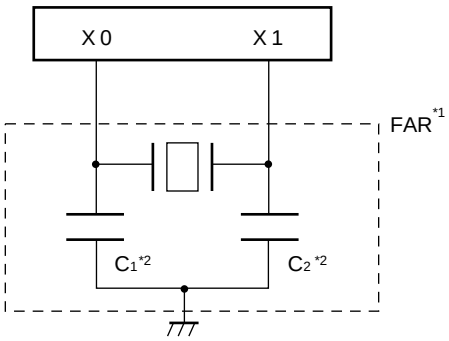
Parameter	Symbol	Pin name	Condition	Value			Unit	Remarks
				Min.	Typ.	Max.		
Machine cycle time	t_{CYC}	CLK	Load condition: 80 pF	62.5	—	1600	ns	*
CLK ↑ → CLK↓	t_{CHCL}			t_{CYC}/2 – 20	—	t_{CYC}/2	ns	

* : t_{CYC} = n/F_C, n gear ratio (1, 2, 4, 16)



(3) Recommended Resonator Manufacturers

• **Sample Application of Piezoelectric Resonator (FAR Series)**



*1: Fujitsu Acoustic Resonator

FAR part number (built-in capacitor type)	Frequency	Initial deviation of FAR frequency (T_A = +25°C)	Temperature characteristics of FAR frequency (T_A = –20°C to +60°C)	Load capacitance*2
FAR-C4C F-1 6000-□02	16.00	±0.5%	±0.5%	Built-in
FAR-C4C F-1 6000-□12		±0.5%	±0.5%	

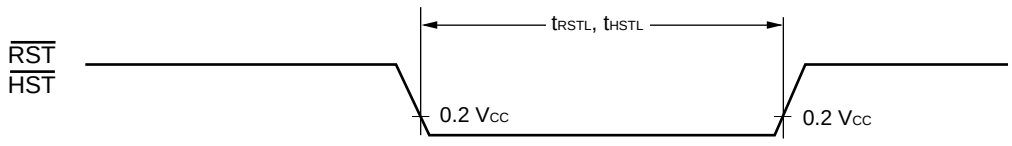
Inquiry: FUJITSU LIMITED

(4) Reset and Hardware Standby Input Standards

Single-chip mode MB90214/P214B/W214B : (V_{CC} = +4.5 V to +5.5 V, V_{SS} = 0.0 V, T_A = –40°C to +105°C)
MB90P214A/W214A : (V_{CC} = +4.5 V to +5.5 V, V_{SS} = 0.0 V, T_A = –40°C to +85°C)
External bus mode : (V_{CC} = +4.5 V to +5.5 V, V_{SS} = 0.0 V, T_A = –40°C to +70°C)

Parameter	Symbol	Pin name	Condition	Value			Unit	Remarks
				Min.	Typ.	Max.		
Reset input time	t_{RSTL}	$\overline{RST}$	—	5 t_{CYC}	—	—	ns	
Hardware standby input time	t_{HSTL}	$\overline{HST}$		5 t_{CYC}	—	—	ns	*

* : The machine cycle (t_{CYC}) at hardware standby input is set to 1/16 divided oscillation.



(5) Power on Supply Specifications (Power-on Reset)

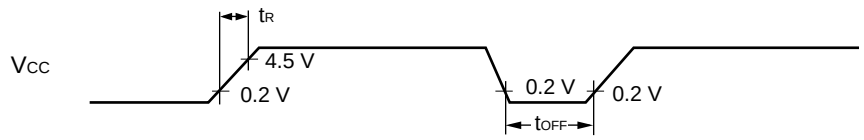
Single-chip mode MB90214/P214B/W214B : (V_{CC} = +4.5 V to +5.5 V, V_{SS} = 0.0 V, T_A = –40°C to +105°C)
MB90P214A/W214A : (V_{CC} = +4.5 V to +5.5 V, V_{SS} = 0.0 V, T_A = –40°C to +85°C)
External bus mode : (V_{CC} = +4.5 V to +5.5 V, V_{SS} = 0.0 V, T_A = –40°C to +70°C)

Parameter	Symbol	Pin name	Condition	Value			Unit	Remarks
				Min.	Typ.	Max.		
Power supply rising time	t_R	V_{CC}	—	—	—	30	ms	*
Power supply cut-off time	t_{OFF}	V_{CC}	—	1	—	—	ms	

* : Before the power rising, V_{CC} must be less than +0.2 V.

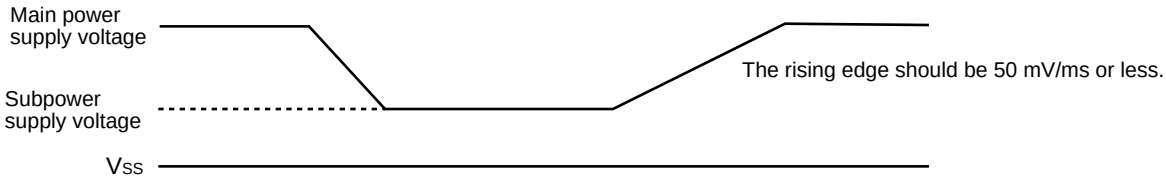
Notes:
- The above specifications are for the power-on reset.
- Always apply power-on reset using these specifications, regardless of whether or not the power-on reset is needed.
- There are some internal registers (such as STBYC) which are only initialized by the power-on reset.

- **Power-on Reset**



Note: Caution on switching power supply
Abrupt change of supply voltage may initiate power-on reset, even if the above requirements are not met. It is, therefore, recommended to power up gradually during the instantaneous change of power supply as shown in the figure below.

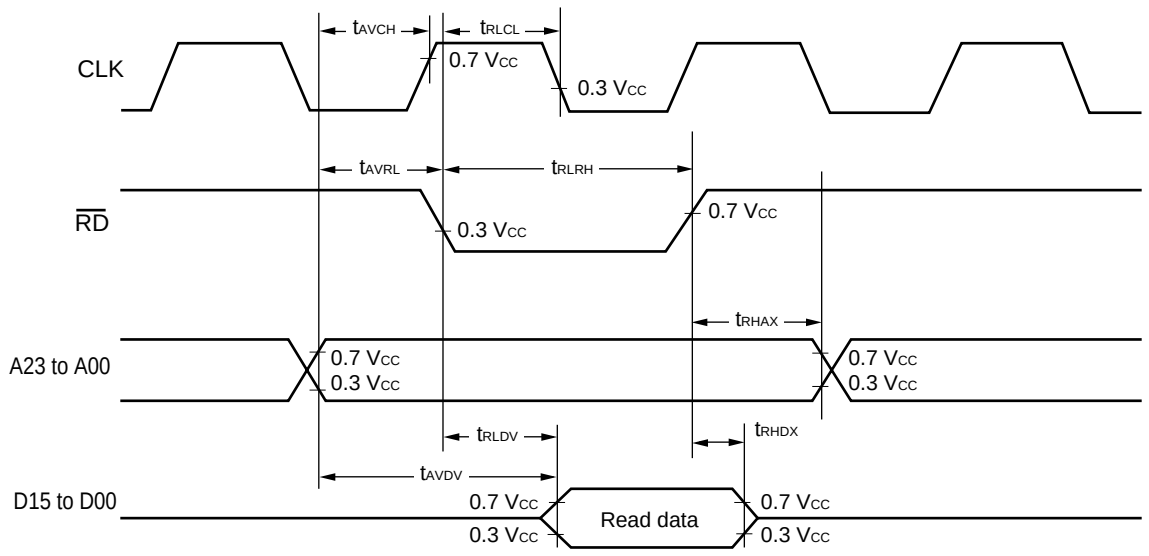
- **Changing Power Supply**



(6) Bus Read Timing

(V_{CC} = +4.5 to +5.5 , V_{SS} = 0.0 V, T_A = –40°C to +70°C)

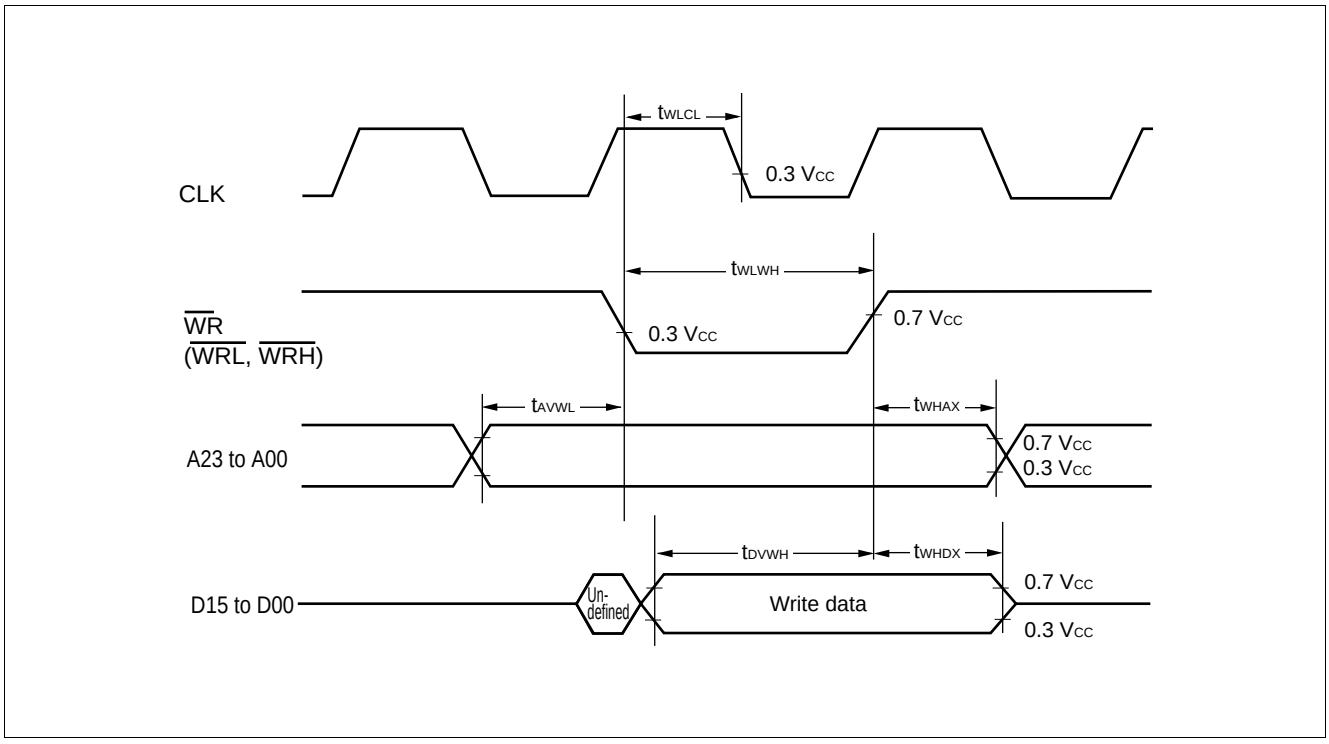
Parameter	Symbol	Pin name	Condition	Value		Unit	Remarks
				Min.	Max.		
Valid address → $\overline{RD}$ ↓ time	t_{AVRL}	A23 to A00	Load condition: 80 pF	$t_{CYC}/2 – 20$	—	ns	
$\overline{RD}$ pulse width	t_{RLRH}	RD		$t_{CYC} – 25$	—	ns	
$\overline{RD}$ ↓ → valid data input	t_{RLDV}	D15 to D00		—	$t_{CYC} – 30$	ns	
$\overline{RD}$ ↑ → data hold time	t_{RHDX}			0	—	ns	
Valid address→ valid data input	t_{AVDV}			—	$3 t_{CYC}/2 – 40$	ns	
$\overline{RD}$ ↑ → address valid time	t_{RHAX}	A23 to A00		$t_{CYC}/2 – 20$	—	ns	
Valid address → CLK ↑ time	t_{AVCH}	A23 to A00 CLK		$t_{CYC}/2 – 25$	—	ns	
$\overline{RD}$ ↓ → CLK ↓ time	t_{RLCL}	$\overline{RD}$, CLK		$t_{CYC}/2 – 25$	—	ns	



(7) Bus Write Timing

(V_{CC} = +4.5 to +5.5 V, V_{SS} = 0.0 V, T_A = –40°C to +70°C)

Parameter	Symbol	Pin name	Condition	Value		Unit	Remarks
				Min.	Max.		
Valid address → $\overline{WR}$ ↓ time	t_{AVWL}	A23 to A00	Load condition: 80 pF	$t_{CYC}/2 - 20$	—	ns	
$\overline{WR}$ ↓ pulse width	t_{WLWH}	$\overline{WRL}$, $\overline{WRH}$		$t_{CYC} - 25$	—	ns	
Valid data output → $\overline{WR}$ ↑ time	t_{DVWH}	D15 to D00		$t_{CYC} - 40$	—	ns	
$\overline{WR}$ ↑ → data hold time	t_{WHDX}			$t_{CYC}/2 - 20$	—	ns	
$\overline{WR}$ ↑ → address valid time	t_{WHAX}	A23 to A00		$t_{CYC}/2 - 20$	—	ns	
$\overline{WR}$ ↓ → CLK ↓ time	t_{WLCH}	$\overline{WRL}$, $\overline{WRH}$, CLK		$t_{CYC}/2 - 25$	—	ns	

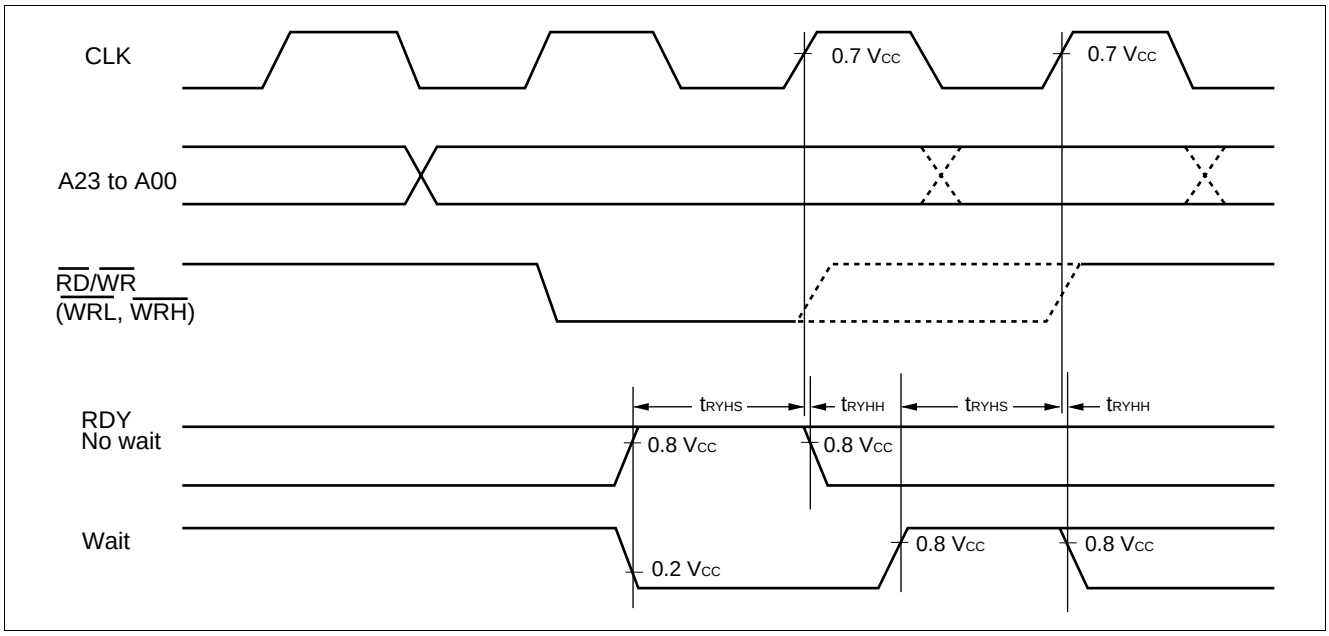


(8) Ready Signal Input Timing

(V_{CC} = +4.5 to +5.5 V, V_{SS} = 0.0 V, T_A = –40°C to +70°C)

Parameter	Symbol	Pin name	Condition	Value		Unit	Remarks
				Min.	Max.		
RDY setup time	t_{RYHS}	RDY	Load condition: 80 pF	40	—	ns	
RDY hold time	t_{RYHH}			0	—	ns	

Note: Use the auto-ready function if the RDY setup time is insufficient.

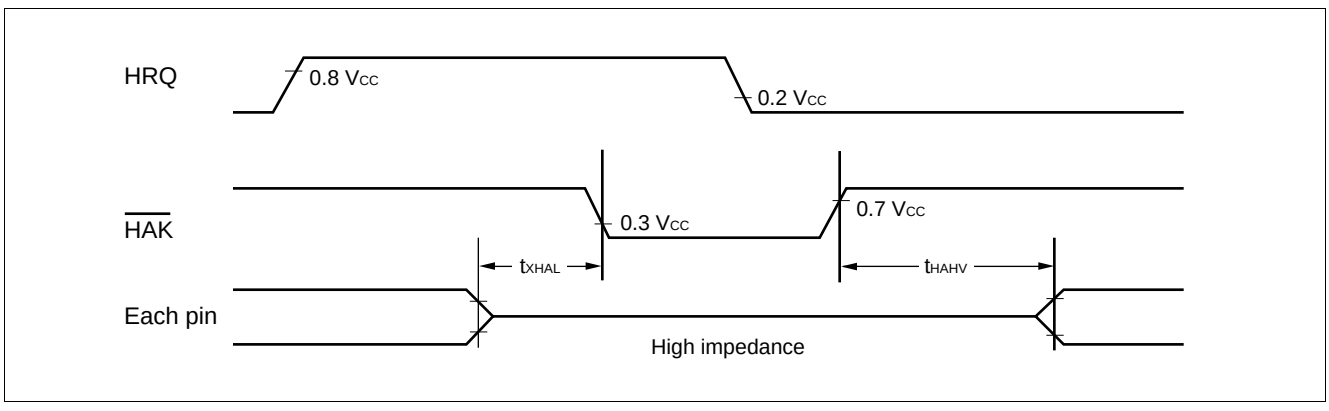


(9) Hold Timing

(V_{CC} = +4.5 to +5.5 V, V_{SS} = 0.0 V, T_A = –40°C to +70°C)

Parameter	Symbol	Pin name	Condition	Value		Unit	Remarks
				Min.	Max.		
Pin floating → $\overline{HAK}$ ↓ time	t_{XHAL}	$\overline{HAK}$	Load condition: 80 pF	30	t_{CYC}	ns	
$\overline{HAK}$ ↑ → pin valid time	t_{HAHV}			t_{CYC}	$2t_{CYC}$	ns	

Note: It takes at least one cycle for $\overline{HAK}$ to vary after HRQ is fetched.



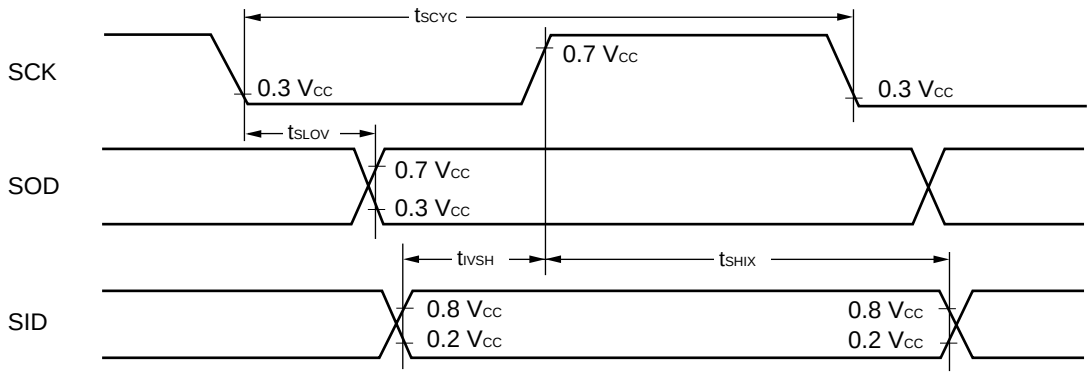
(10) UART Timing

Single-chip mode MB90214/P214B/W214B : (V_{CC} = +4.5 V to +5.5 V, V_{SS} = 0.0 V, T_A = –40°C to +105°C)
MB90P214A/W214A : (V_{CC} = +4.5 V to +5.5 V, V_{SS} = 0.0 V, T_A = –40°C to +85°C)
External bus mode : (V_{CC} = +4.5 V to +5.5 V, V_{SS} = 0.0 V, T_A = –40°C to +70°C)

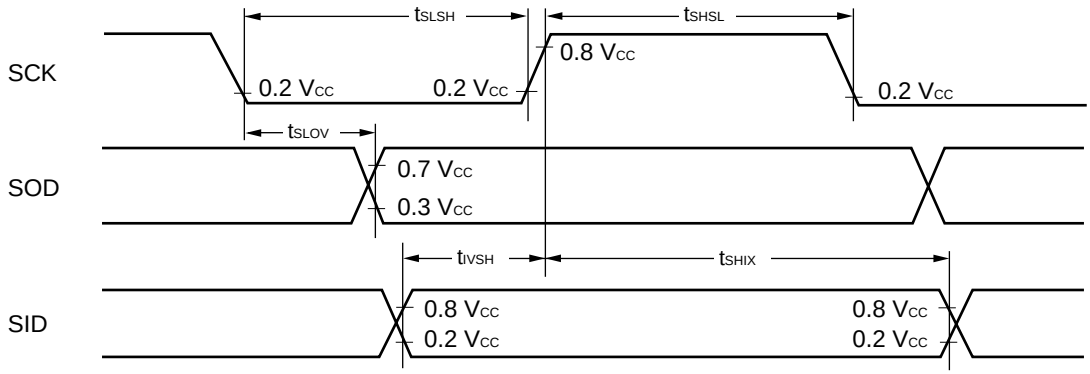
Parameter	Symbol	Pin name	Condition	Value		Unit	Remarks
				Min.	Max.		
Serial clock cycle time	t_{SCYC}	—	Load condition: 80 pF	8 t_{CYC}	—	ns	Internal shift clock mode output pin
SCLK ↓ → SOUT delay time	t_{SLOV}			–80	80	ns	
Valid SIN → SCLK ↑	t_{IVSH}			100	—	ns	
SCLK ↑ → Valid SIN hold time	t_{SHIX}			60	—	ns	
Serial clock “H” pulse width	t_{SHSL}			4 t_{CYC}	—	ns	External shift clock mode output pin
Serial clock “L” pulse width	t_{SLSH}			4 t_{CYC}	—	ns	
SCLK ↓ → SOUT delay time	t_{SLOV}			—	150	ns	
Valid SIN → SCLK ↑	t_{IVSH}			60	—	ns	
SCLK ↑ → Valid SIN hold time	t_{SHIX}			60	—	ns	

Notes: • These AC characteristics assume the CLK synchronous mode.
• t_{CYC} is the machine cycle (unit: ns).

• **Internal Shift Clock Mode**



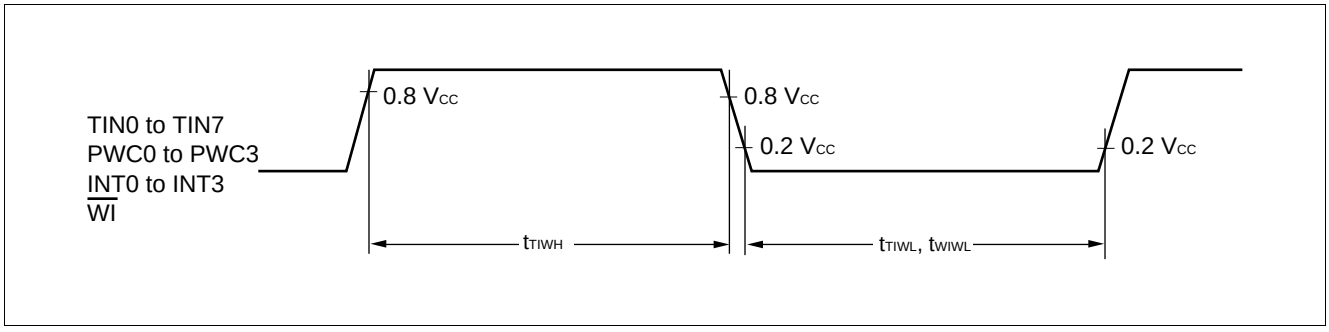
• **External Shift Clock Mode**



(11) Resource Input Timing

Single-chip mode MB90214/P214B/W214B : (V_{CC} = +4.5 V to +5.5 V, V_{SS} = 0.0 V, T_A = –40°C to +105°C)
MB90P214A/W214A : (V_{CC} = +4.5 V to +5.5 V, V_{SS} = 0.0 V, T_A = –40°C to +85°C)
External bus mode : (V_{CC} = +4.5 V to +5.5 V, V_{SS} = 0.0 V, T_A = –40°C to +70°C)

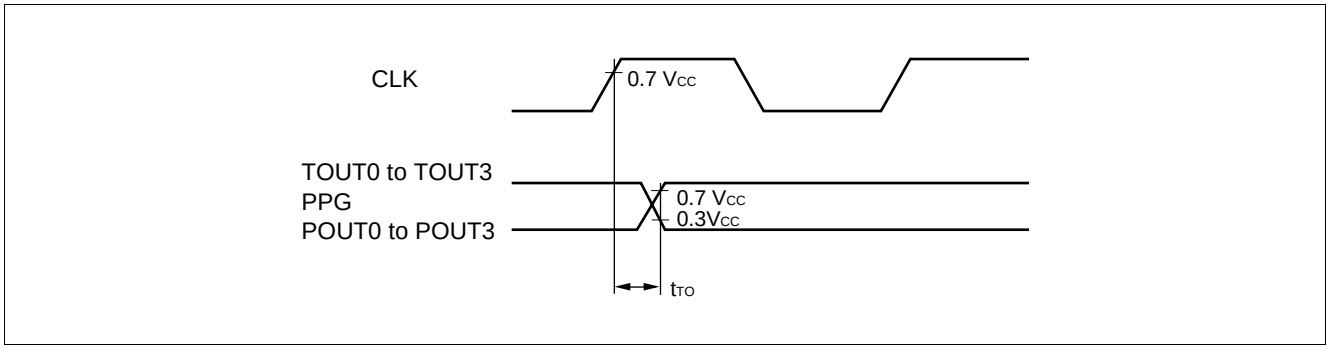
Parameter	Symbol	Pin name	Condition	Value			Unit	Remarks
				Min.	Typ.	Max.		
Input pulse width	t_{TIWH} t_{TIWL}	TIN0 to TIN3	Load condition: 80 pF	4 t_{CYC}	—	—	ns	External event count input mode
				2 t_{CYC}	—	—		Trigger input/ Gate input mode
		TIN4 to TIN7		2 t_{CYC}	—	—	ns	Gate input mode
		PWC0 to PWC3		2 t_{CYC}	—	—	ns	
		INT0 to INT3		3 t_{CYC}	—	—	ns	
		$\overline{ATG}$		2 t_{CYC}	—	—	ns	
	t_{WIWL}	$\overline{WI}$		4 t_{CYC}	—	—	ns	



(12) Resource Output Timing

Single-chip mode MB90214/P214B/W214B : (V_{CC} = +4.5 V to +5.5 V, V_{SS} = 0.0 V, T_A = –40°C to +105°C)
MB90P214A/W214A : (V_{CC} = +4.5 V to +5.5 V, V_{SS} = 0.0 V, T_A = –40°C to +85°C)
External bus mode : (V_{CC} = +4.5 V to +5.5 V, V_{SS} = 0.0 V, T_A = –40°C to +70°C)

Parameter	Symbol	Pin name	Condition	Value		Unit	Remarks
				Min.	Max.		
CLK ↑ → T_{OUT} transition time	t_{TO}	TOUT0 to TOUT3 PPG POUT0 to POUT3	Load condition: 80 pF	—	30	ns	



5. A/D Converter Electrical Characteristics

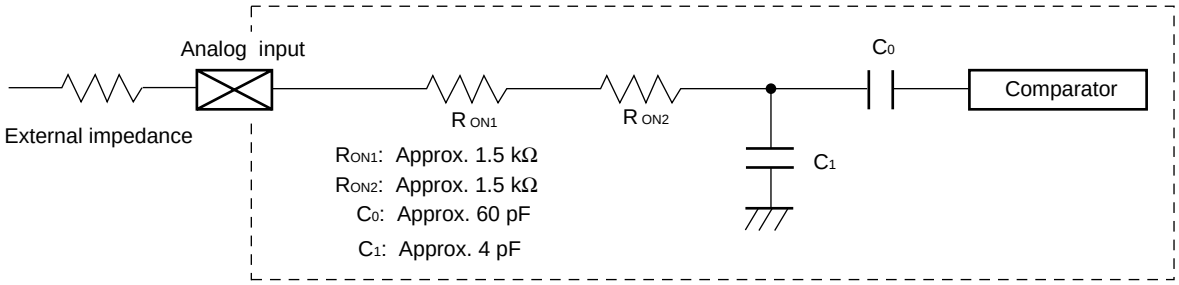
Single-chip mode MB90214/P214B/W214B:
($AV_{CC} = V_{CC} = +5.0 \pm 10\%$, $AV_{SS} = V_{SS} = 0.0$ V, $T_A = -40°C$ to $+105°C$, $+4.5 \text{ V} \leqq AVRH - AVRL$)
Single-chip mode MBP90214A/W214A:
($AV_{CC} = V_{CC} = +5.0 \pm 10\%$, $AV_{SS} = V_{SS} = 0.0$ V, $T_A = -40°C$ to $+85°C$, $+4.5 \text{ V} \leqq AVRH - AVRL$)
External bus mode:
($AV_{CC} = V_{CC} = +5.0 \pm 10\%$, $AV_{SS} = V_{SS} = 0.0$ V, $T_A = -40°C$ to $+70°C$, $+4.5 \text{ V} \leqq AVRH - AVRL$)

Parameter	Symbol	Pin name	Condition	Value			Unit	Remarks
				Min.	Typ.	Max.		
Resolution	n	—	—	—	—	10	bit	
Total error	—	—	—	–3.0	—	+3.0	LSB	
Linearity error	—	—	—	–2.0	—	+2.0	LSB	
Differential linearity error	—	—	—	—	—	±1.5	LSB	
Zero transition voltage	V_{OT}	AN0 to AN7	—	AVRL – 1.5	AVRL + 0.5	AVRL + 2.5	LSB	
Full-scale transition voltage	V_{FST}		—	AVRH – 3.5	AVRH – 1.5	AVRH + 0.5	LSB	
Conversion time	T_{CONV}	—	t_{CYC} = 62.5 ns	6.125	—	—	µs	98 machine cycles
Sampling period	T_{SAMP}	—		3.75	—	—	µs	60 machine cycles
Analog port input current	I_{AIN}	AN0 to AN7	—	—	—	±0.1	µA	
Analog input voltage	V_{AIN}		—	AVRL	—	AVRH	V	
Analog reference voltage	—	AVRH	—	AVRL	—	AV_{CC}	V	
		AVRL	—	AV_{SS}	—	AVRH	V	
Reference voltage supply current	I_R	AVRH	—	—	200	500	µA	
	I_{RH}		—	—	—	5*	µA	
Interchannel disparity	—	AN0 to AN7	—	—	—	4	LSB	

* : The current value applies to the CPU stop mode with the A/D converter inactive ($V_{CC} = AV_{CC} = AVRH = +5.5$ V).

Notes: (1) The smaller the | AVRH – AVRL |, the greater the error would become relatively.
(2) Use the output impedance of the external circuit for analog input under the following conditions:
External circuit output impedance < approx. 10 kΩ (Sampling period ≒ 3.75 µs, t_{CYC} = 62.5 ns)
(3) Precision values are standard values applicable to sleep mode.
(4) If V_{CC}/AV_{CC} or V_{SS}/AV_{SS} is caused by a noise to drop to below the analog input voltage, the analog input current is likely to increase. In such cases, a bypass capacitor or the like should be provided in the external circuit to suppress the noise.

• **Equivalent Circuit of Analog Input Circuit**



Note: The values shown here are reference values.

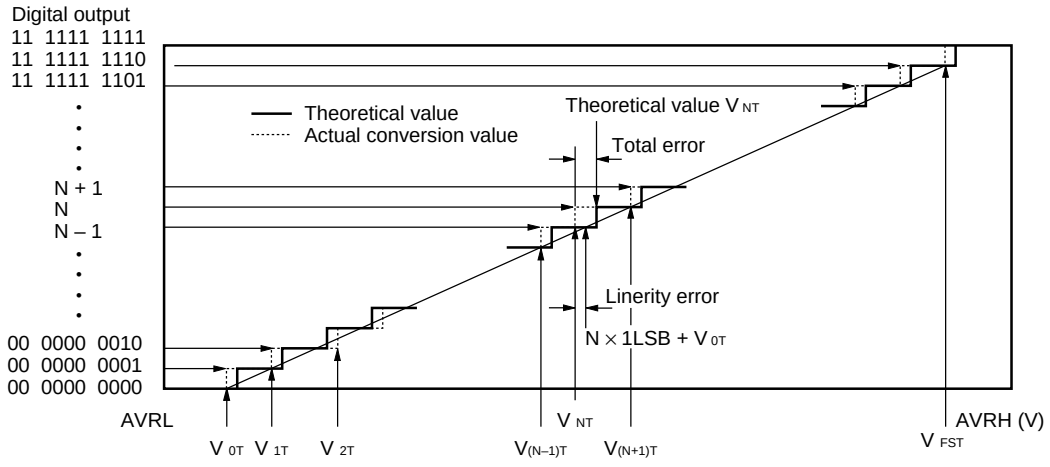
6. A/D Converter Glossary

Resolution: Analog changes that are identifiable with the A/D converter
When the number of bits is 10, analog voltage can be divided into 2^{10} = 1024.

Total error: Difference between actual and logical values. This error is caused by a zero transition error, full-scale transition error, linearity error, differential linearity error, or by noise.

Linearity error: The deviation of the straight line connecting the zero transition point (“00 0000 0000” ↔ “00 0000 0001”) with the full-scale transition point (“11 1111 1111” ↔ “11 1111 1110”) from actual conversion characteristics

Differential linearity error: The deviation of input voltage needed to change the output code by 1 LSB from the theoretical value.



• 1LSB = $\frac{V_{FST} - V_{0T}}{1022}$ • 1LSB theoretical value = $\frac{AV_{RH} - AV_{RL}}{1022}$

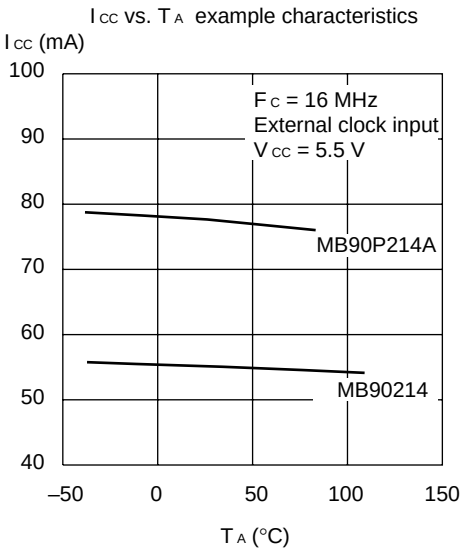
• Linearity error = $\frac{V_{NT} - (N \times 1LSB + V_{0T})}{1LSB}$ N = 0 to 1022, $V_{NT\,(N=0)} = V_{0T}$, $V_{NT\,(N=1022)} = V_{FST}$

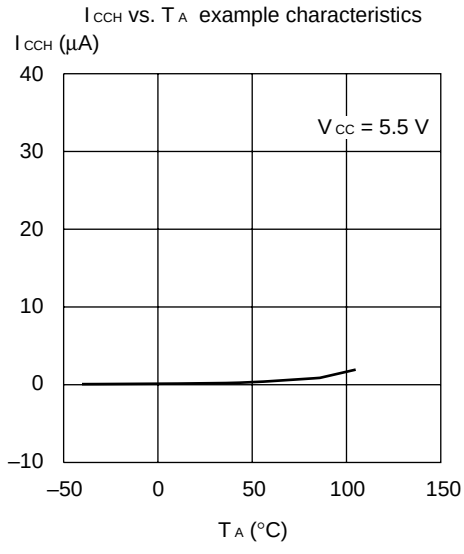
• Differential linearity error = $\frac{V_{NT} - V_{(N-1)T}}{1LSB} - 1$ N = 1 to 1022

• Total error = $\frac{V_{NT} - \{(N + 0.5) \times 1LSB\ theoretical\ value\}}{1LSB\ theoretical\ value}$ N = 0 to 1022

■ EXAMPLE CHARACTERISTICS

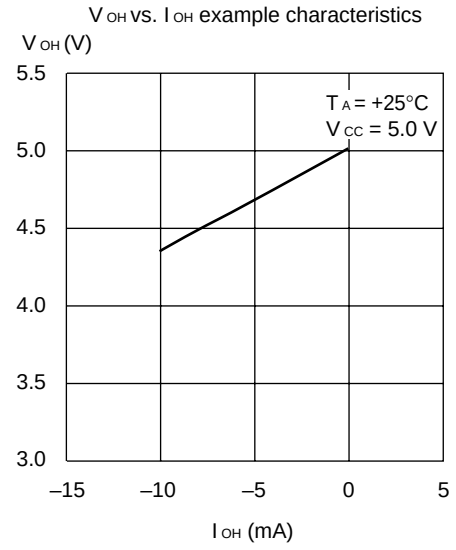
(1) Power Supply Current

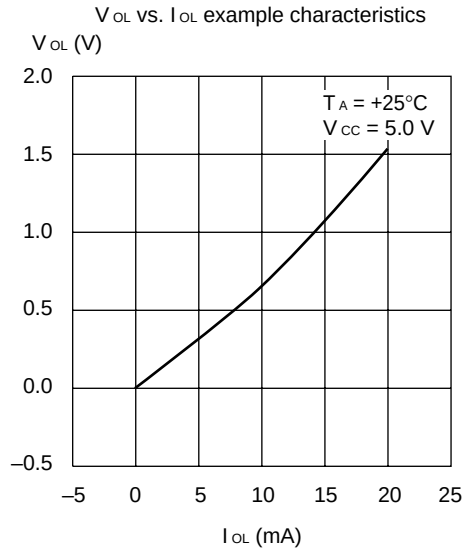




Note: These are not assured value of characteristics but example characteristics.

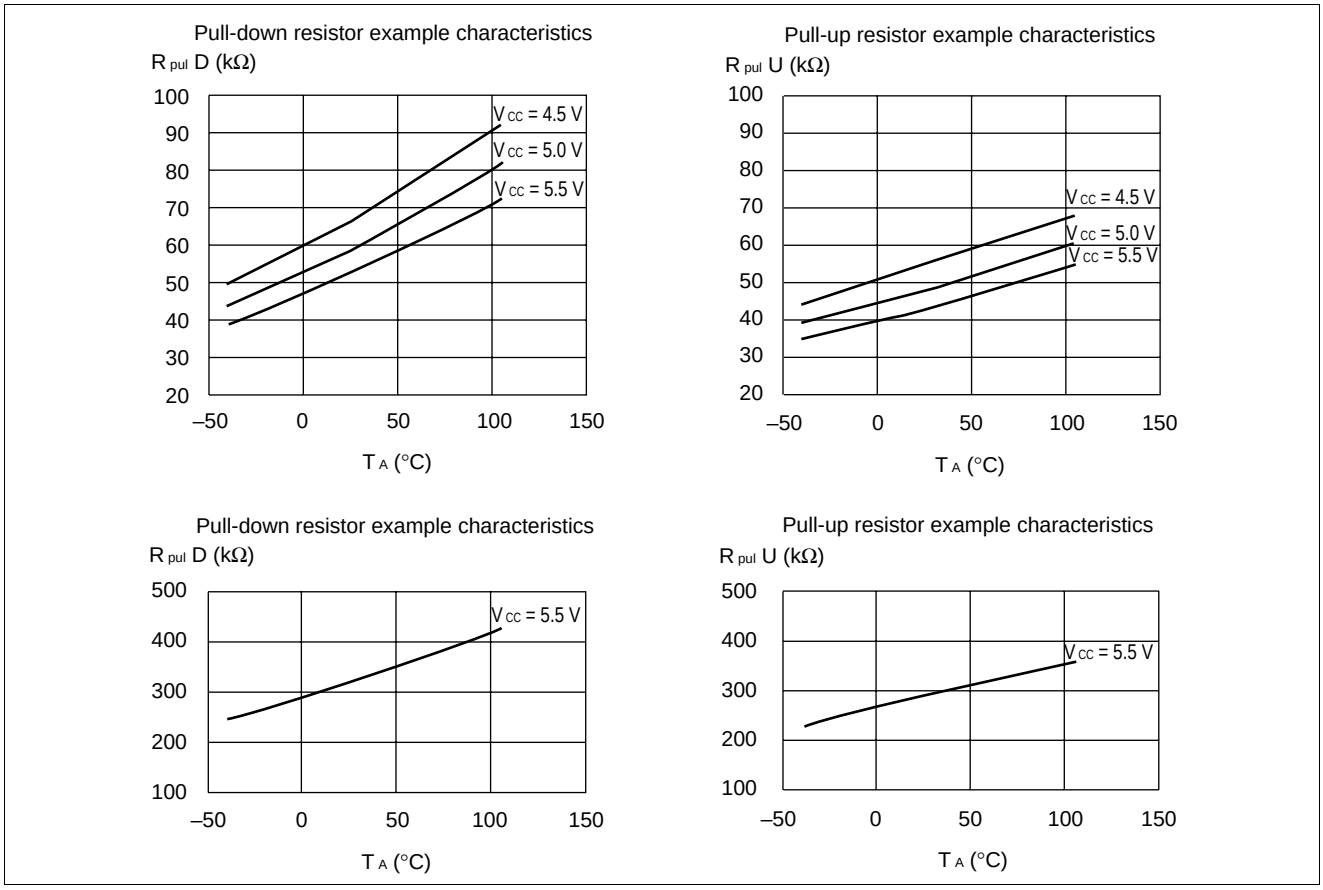
(2) Output Voltage





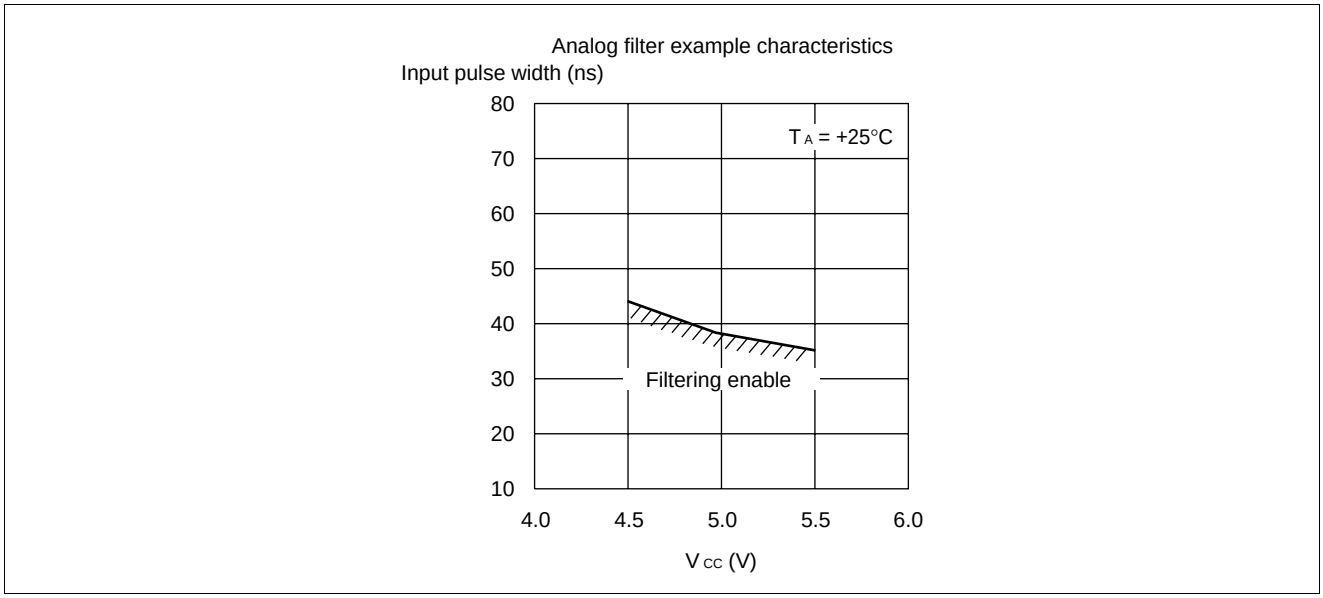
Note: These are not assured value of characteristics but example characteristics.

(3) Pull-up/Pull-down Resistor



Note: These are not assured value of characteristics but example characteristics.

(4) Analog Filter



Note: These are not assured value of characteristics but example characteristics.

■ INSTRUCTIONS (421 INSTRUCTIONS)

Table 1 Description of Items in Instruction List

Item	Description
Mnemonic	English upper case and symbol: Described directly in assembler code. English lower case: Converted in assembler code. Number of letters after English lower case: Describes bit width in code.
#	Describes number of bytes.
~	Describes number of cycles. For other letters in other items, refer to table 4.
B	Describes correction value for calculating number of actual states. Number of actual states is calculated by adding value in the ~section.
Operation	Describes operation of instructions.
LH	Describes a special operation to 15 bits to 08 bits of the accumulator. Z : Transfer 0. X : Sign-extend and transfer. – : No transmission
AH	Describes a special operation to the upper 16-bit of the accumulator. * : Transmit from AL to AH. – : No transfer. Z : Transfer 00_H to AH. X : Sign-extend AL and transfer 00_H or FF_H to AH.
I	Describes status of I (interrupt enable), S (stack), T (sticky bit), N (negative), Z (zero), V (overflow), and C (carry) flags. * : Changes after execution of instruction. – : No changes. S : Set after execution of instruction. R : Reset after execution of instruction.
S	
T	
N	
Z	
V	
C	
RMW	Describes whether or not the instruction is a read-modify-write type (a data is read out from memory etc. in single cycle, and the result is written into memory etc.). * : Read-modify-write instruction – : Not read-modify-write instruction Note: Not used to addresses having different functions for reading and writing operations.

Table 2 Description of Symbols in Instruction Table

Item	Description
A	32-bit accumlator The bit length is dependent on the instructions to be used. Byte : Lower 8-bit of AL Word :16-bit of AL Long : AL: 32-bit of AH
AH	Upper 16-bit of A
AL	Lower 16-bit of A
SP	Stack pointer (USP or SSP)
PC	Program counter
SPCU	Stack pointer upper limited register
SPCL	Stack pointer lower limited register
PCB	Program bank register
DTB	Data bank register
ADB	Additional data bank register
SSB	System stack bank register
USB	User stack bank register
SPB	Current stack bank register (SSB or USB)
DPR	Direct page register
brg1	DTB, ADB, SSB, USB, DPR, PCB
brg2	DTB, ADB, SSB, USB, DPR
Ri	R0, R1, R2, R3, R4, R5, R6, R7
RWi	RW0, RW1, RW2, RW3, RW4, RW5, RW6, RW7
RWj	RW0, RW1, RW2, RW3
RLi	RL0, RL1, RL2, RL3
dir addr16 addr24 ad24 0 to 15 ad24 16 to 23	Specify shortened direct address. Specify direct address. Specify physical direct address. bit0 to bit15 of addr24 bit16 to bit 23 of addr24
io	I/O area (000000_H to $0000FF_H$)
#imm4 #imm8 #imm16 #imm32 ext (imm8)	4-bit immediate data 8-bit immediate data 16-bit immediate data 32-bit immediate data 16-bit data calculated by sign-extending an 8-bit immediate data
disp8 disp16	8-bit displacement 16-bit displacement
bp	Bit offset value
vct4 vct8	Vector number (0 to 15) Vector number (0 to 255)
( )b	Bit address
rel ear eam	Specify PC relative branch. Specify effective address (code 00 to 07). Specify effective address (code 08 to 1F).
rlst	Register allocation

Table 3 Effective Address Field

Code	Symbol			Address type	Number of bytes in address extension block*
00 01 02 03 04 05 06 07	R0 R1 R2 R3 R4 R5 R6 R7	RW0 RW1 RW2 RW3 RW4 RW5 RW6 RW7	RL0 (RL0) RL1 (RL1) RL2 (RL2) RL3 (RL3)	Register direct "ea" corresponds to byte, word, and long word from left respectively.	—
08 09 0A 0B	@RW0 @RW1 @RW2 @RW3			Register indirect	0
0C 0D 0E 0F	@RW0 + @RW1 + @RW2 + @RW3 +			Register indirect with post increment	0
10 11 12 13 14 15 16 17	@RW0 + disp8 @RW1 + disp8 @RW2 + disp8 @RW3 + disp8 @RW4 + disp8 @RW5 + disp8 @RW6 + disp8 @RW7 + disp8			Register indirect with 8-bit displacement	1
18 19 1A 1B	@RW0 + disp16 @RW1 + disp16 @RW2 + disp16 @RW3 + disp16			Register indirect with 16-bit displacement	2
1C 1D 1E 1F	@RW0 + RW7 @RW1 + RW7 @PC + disp16 addr16			Register indirect with index Register indirect with index PC indirect with 16-bit displacement Direct address	0 0 2 2

Note: Number of bytes for address extension corresponds to “+” in the # (number of bytes) part in the instruction table.

Table 4 Number of Execution Cycles in Addressing Modes

Code	Operand	(a)*
		Number of execution cycles for addressing modes
00 to 07	Ri RWi RLi	Listed in instruction table
08 to 0B	@RWj	1
0C to 0F	@RWj +	4
10 to 17	@RWi + disp8	1
18 to 1B	@RWj + disp16	1
1C 1D 1E 1F	@RW0 + RW7 @RW1 + RW7 @PC + disp16 addr16	2 2 2 1

Note: (a) is used for ~ (number of cycles) and B (correction value) in instruction table.

Table 5 Correction Value for Number of Cycles for Calculating Actual Number of Cycles

Operand	(b)*	(c)*	(d)*
	byte	word	long
Internal register	+0	+0	+0
Internal RAM even address Internal RAM odd address	+0 +0	+0 +1	+0 +2
Other than internal RAM even address Other than internal RAM odd address	+1 +1	+1 +3	+2 +6
External data bus 8-bit	+1	+3	+6

Notes: (b), (c), (d) is used for ~ (number of cycles) and B (correction value) in instruction table.

MULW	A, ear	2	*12	0	word (A) × word (ear) → long (A)	–	–	–	–	–	–	–	–	–	–
MULW	A, eam	2 +	*13	(b)	word (A) × word (eam) → long (A)	–	–	–	–	–	–	–	–	–	–

For (b) and (c), refer to “Table 5 Correction Values for Number of Cycles for Calculating Actual Number of Cycles.”

*1: Set to 3 for divide-by-0, 8 or 18 for an overflow, and 18 for normal operation.
*2: Set to 3 for divide-by-0, 10 or 21 for an overflow, and 22 for normal operation.
*3: Set to 4 + (a) for divide-by-0, 11 + (a) or 22 + (a) for an overflow, and 23 + (a) for normal operation.
*4: Positive divided: Set to 4 for divide-by-0, 10 or 29 for an overflow, and 30 for normal operation.
Negative divided: Set to 4 for divide-by-0, 11 or 30 for an overflow, and 31 for normal operation.
*5: Positive divided: Set to 4 + (a) for divide-by-0, 11 + (a) or 30 + (a) for an overflow, and 31 + (a) for normal operation.
Negative divided: Set to 4 + (a) for divide-by-0, 12 + (a) or 31 + (a) for an overflow, and 32 + (a) for normal operation.
*6: Set to (b) when the division-by-0 or an overflow, and 2 × (b) for normal operation.
*7: Set to (c) when the division-by-0 or an overflow, and 2 × (c) for normal operation.
*8: Set to 3 when byte (AH) is zero, 12 when the result is positive, and 13 when the result is negative.
*9: Set to 3 when byte (ear) is zero, 12 when the result is positive, and 13 when the result is negative.
*10: Set to 4 + (a) when byte (eam) is zero, 13 + (a) when the result is positive, and 14 + (a) when the result is negative.
*11: Set to 3 when word (AH) is zero, 12 when the result is positive, and 13 when the result is negative.
*12: Set to 3 when word (ear) is zero, 16 when the result is positive, and 19 when the result is negative.
*13: Set to 4 + (a) when word (eam) is zero, 17 + (a) when the result is positive, and 20 + (a) when the result is negative.

Note: When overflow occurs during DIV or DIVW instruction execution, the number of execution cycles takes two values because of detection before and after an operation.
When overflow occurs during DIV or DIVW instruction execution, the contents of AL are destroyed.

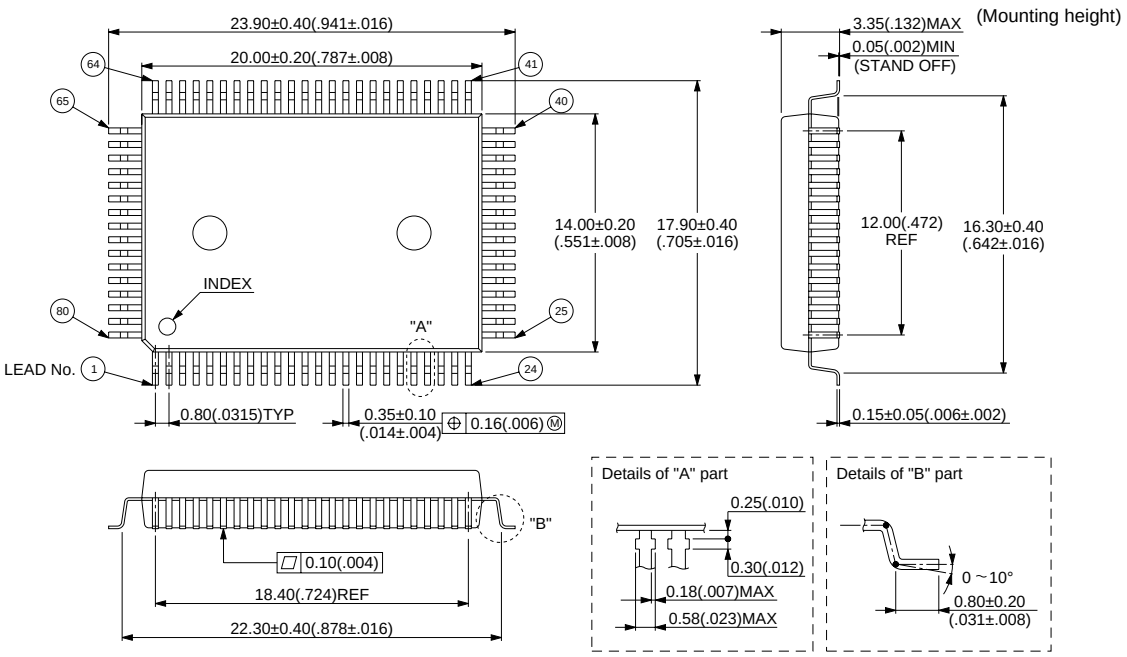
*1: 256 when 5 + imm8 × 5, imm8 is 0.
*2: 256 when 5 + imm8 × 5 + (a), imm8 is 0.
*3: (Number of transfer cycles) × (b) × 2
*4: (Number of transfer cycles) × (c) × 2
*5: The bank register specified by bnk is the same as that for the MOVS instruction.

■ ORDERING INFORMATION

Part number	Type	Package	Remarks
MB90214 MB90P214A MB90P214B	MB90214PF MB90P214PF MB90P214BPF	80-pin Plastic QFP (FPT-80P-M06)	
MB90W214A MB90W214B	MB90W214ZF MB90W214BZF	80-pin Ceramic QFP (FPT-80C-C02)	Only ES level
MB90V210	MB90V210CR	256-pin Ceramic PGA (PGA-256C-A02)	For evaluation

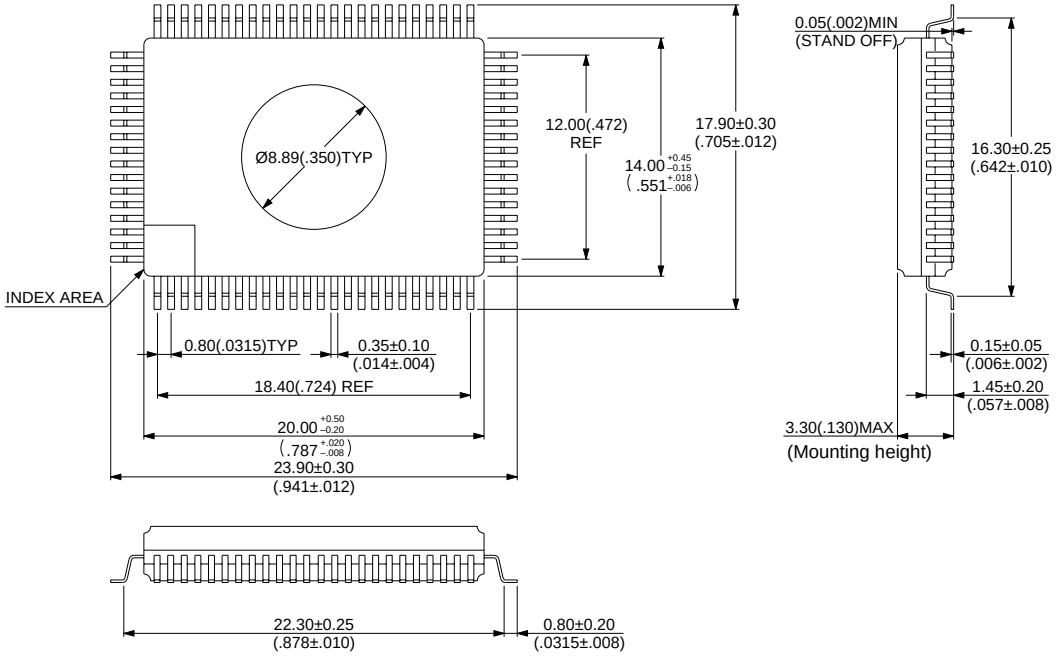
■ PACKAGE DIMENSIONS

80-pin Plastic QFP
(FPT-80P-M06)



Dimensions in mm (inches)

80-pin Ceramic QFP
(FPT-80C-C02)



Dimensions in mm (inches)

The contents of this document are subject to change without notice. Customers are advised to consult with FUJITSU sales representatives before ordering.

The information and circuit diagrams in this document presented as examples of semiconductor device applications, and are not intended to be incorporated in devices for actual use. Also, FUJITSU is unable to assume responsibility for infringement of any patent rights or other rights of third parties arising from the use of this information or circuit diagrams.

FUJITSU semiconductor devices are intended for use in standard applications (computers, office automation and other office equipment, industrial, communications, and measurement equipment, personal or household devices, etc.).
CAUTION:
Customers considering the use of our products in special applications where failure or abnormal operation may directly affect human lives or cause physical injury or property damage, or where extremely high levels of reliability are demanded (such as aerospace systems, atomic energy controls, sea floor repeaters, vehicle operating controls, medical devices for life support, etc.) are requested to consult with FUJITSU sales representatives before such use. The company will not be responsible for damages arising from such use without prior approval.

Any semiconductor devices have inherently a certain rate of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

If any products described in this document represent goods or technologies subject to certain restrictions on export under the Foreign Exchange and Foreign Trade Control Law of Japan, the prior authorization by Japanese government should be required for export of those products from Japan.
