NEC

MOS INTEGRATED CIRCUIT

μPD160010

384-/360-OUTPUT TFT-LCD SOURCE DRIVER (COMPATIBLE WITH 256 GRAY SCALES, mini-LVDS INTERFACE SUPPORTED)

DESCRIPTION

The μPD160010 is a source driver for TFT-LCDS that supports the display of 256 gray scales and employs mini-LVDS interface. Which can realize a full-color display of 16,777,216 colors by output of 256 values γ-corrected by an internal D/A converter and 10-by-2 external power modules. Because the output dynamic range is as large as V_{SS2} + 0.2 V to V_{DD2} – 0.2 V, level inversion operation of the LCD's common electrode is rendered unnecessary. Also, to be able to deal with dot-line inversion, n-line inversion, this source driver is equipped with a built-in 8-bit D/A converter circuit whose odd output pins and even output pins respectively output gray scale voltages of differing polarity. Because of the incorporation of mini-LVDS interface, the data transfer speed has improved and the amount of wiring on the PCB has been significantly reduced.

Remark "mini-LVDS" is the technology with Texas Instruments applied LVDS technology and developed.
(LVDS: Low Voltage Differential Signaling)

FEATURES

- Differential interface: CLK, gray scale data,
- CMOS interface: STHR(L), R,/L, STB, SB, POL, O_{sel}, V_{sel1}, V_{sel2}, SRC, ORC, RxBIAS1, RxBIAS2
- 384/360 outputs (O_{sel})
- Capable of outputting 256 values by means of 10-by-2 external power modules (20 units) and a D/A converter
- Logic power supply voltage (V_{DD1}): 2.7 to 3.6V
- Driver power supply voltage (V_{DD2}): 10.0 to 16.5V
- High-speed data transfer: f_{CLK} = 190 MHz MAX. (internal data transfer speed when operating at V_{DD1} = 2.7 V)
- Output dynamic range: V_{SS2} + 0.2 V to V_{DD2} – 0.2 V
- Apply for dot-line inversion, n-line inversion
- Output voltage polarity inversion function (POL)

★ ORDERING INFORMATION

Part Number	Package
μPD160010N-xxx	TCP (TAB package)
μPD160010NL-xxx	COF (COF package)

Remark The TCP/COF's external shape is customized. To order the required shape, please contact one of our sales representatives.

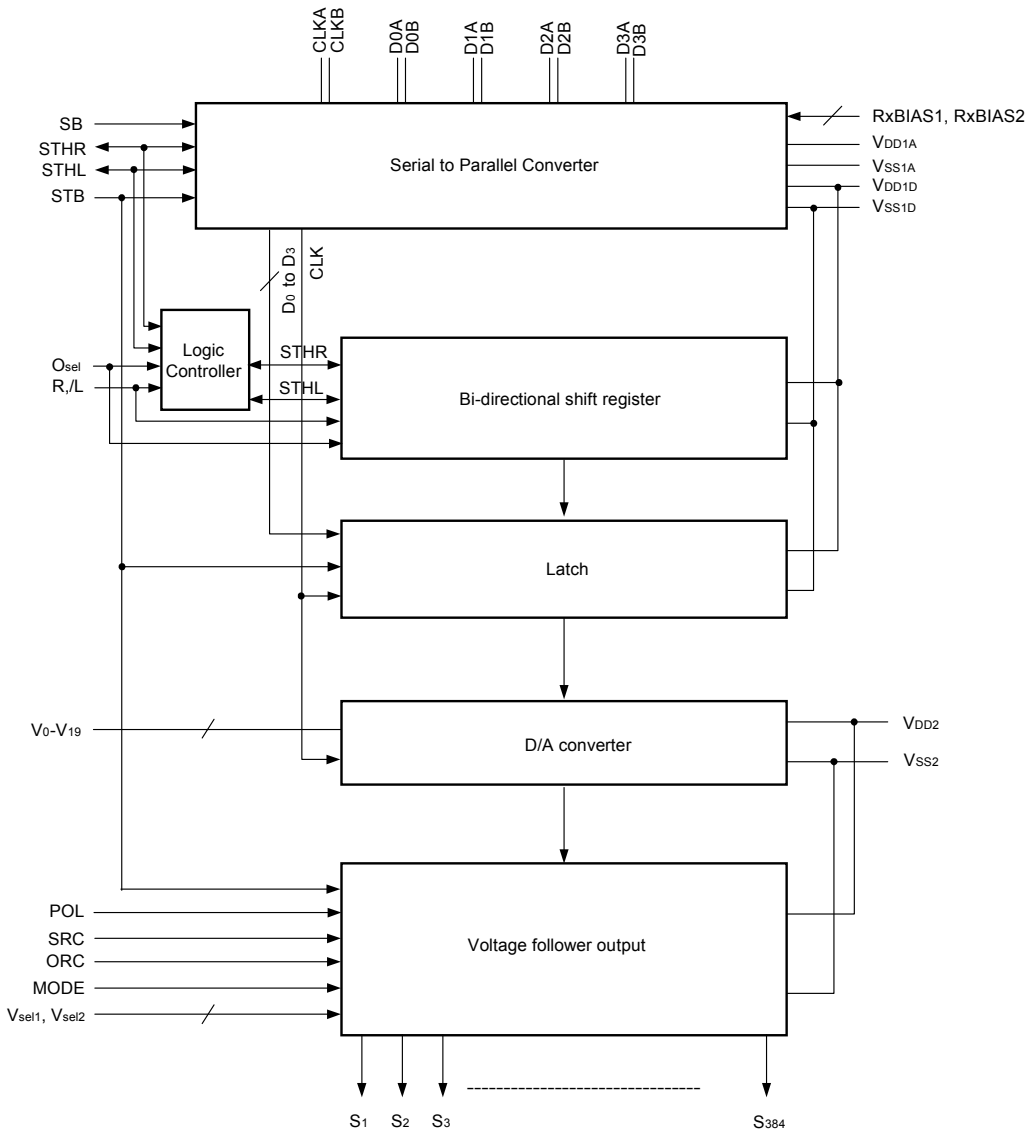
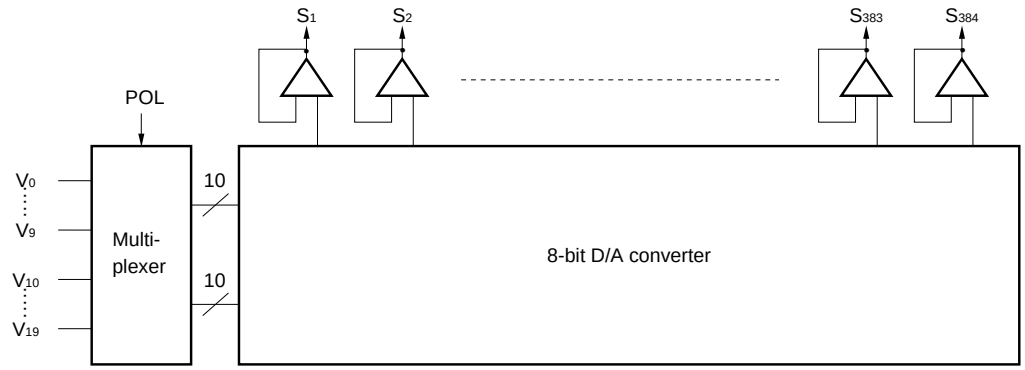
★ 1. BLOCK DIAGRAM

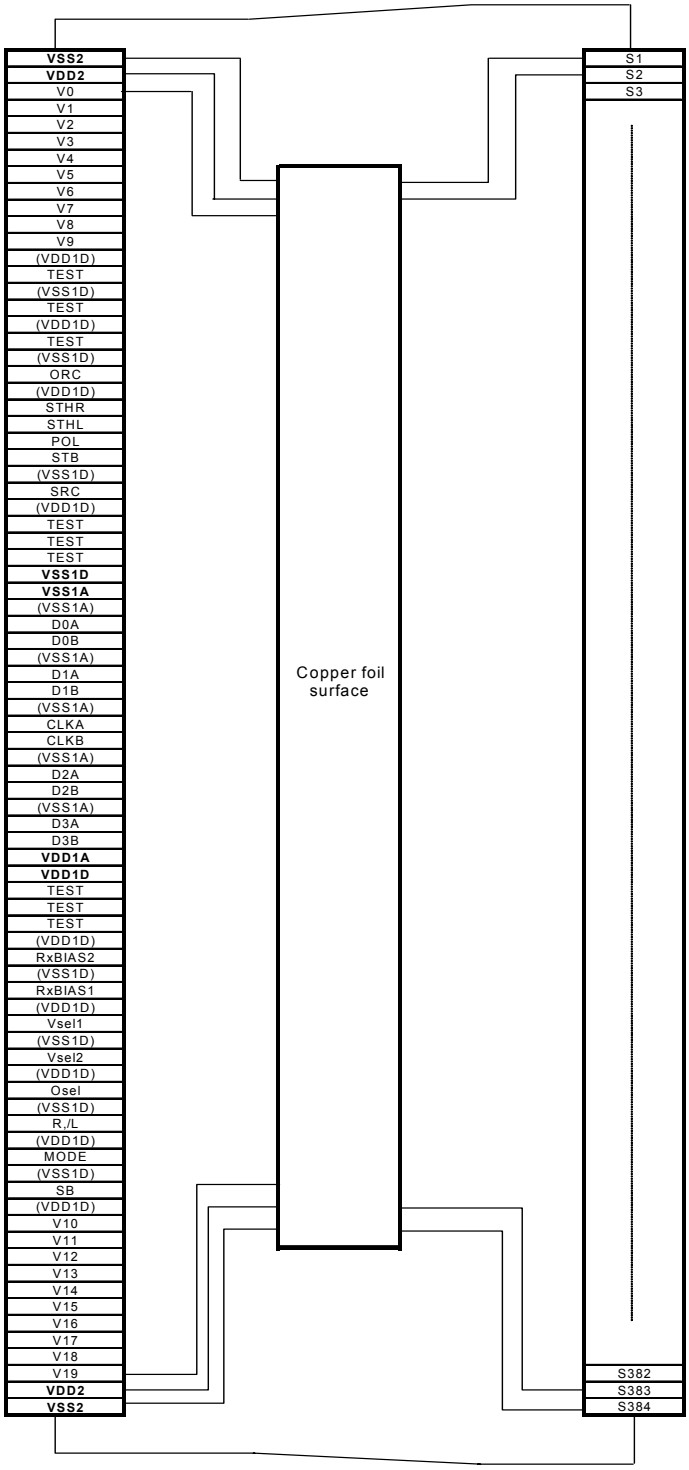


Remark /xxx indicates active low signals.

2. RELATIONSHIP BETWEEN OUTPUT CIRCUIT AND D/A CONVERTER



3. PIN CONFIGURATION (μPD160010NL-xxx:COF, Copper Foil Surface, Face-down)



Remarks 1. This figure does not specify the COF package.

2. (V_{DD1D}) and (V_{SS1D}) is available for supply to logic input terminal. Please don't use these pins for power supply terminal with current.

(V_{SS1A}) must be connected to analog GND on PCB.

4. PIN FUNCTIONS

(1/2)

Pin Symbol	Pin Name	I/O	Description
S_1 to S_{384}	Driver	Output	The D/A converted 256-gray-scale analog voltage is output.
D0A, D0B D1A, D1B D2A, D2B D3A, D3B	Gray scale data	Input (mini-LVDS)	Display data with gray-scale data (8-bit) and control signal (RST = reset). Refer to **Table 4–1**.
CLKA, CLKB	Shift clock	Input (mini-LVDS)	Shift clock. Refer to **Table 4–1**.
R,/L	Shift direction control	Input (CMOS)	The shift direction control pin of shift register. The shift directions of the shift registers are as follows. R,/L = H (right shift): STHR input, $S_1 \rightarrow S_{384}$, STHL output R,/L = L (left shift): STHL input, $S_{384} \rightarrow S_1$, STHR output
STHR	Right shift start pulse	I/O (CMOS)	This is the start pulse I/O pin when connected in cascade. Loading of display data starts when a high level is read. For right shift, STHR is input and STHL is output. For left shift, STHL is input and STHR is output.
STHL	Left shift start pulse		
STB	Latch	Input (CMOS)	Change the input mode, latched the registered data and transfer to DAC at the rising edge. And supplied voltage to LCD pixel is output at falling edge.
POL	Polarity	Input (CMOS)	Control the polarity of the output. Input of the POL signal is allowed the setup time (t_{14}) with respect to STB's rising edge. Refer to **Table 4–3**.
SB	Bus-line set-back	Input (CMOS)	Change the data order of mini-LVDS input. Refer to **Table 4–1**. Input "L" level to this pin.
RxBIAS1, RxBIAS2	mini-LVDS receiver bias voltage control	Input (CMOS)	This pin controls the bias current of mini-LVDS receiver circuit. Please refer to the following table.
O_{sel}	Number of output pins select pin	Input (CMOS)	This pin selects the number of output pins. O_{sel} = L: 384-output mode O_{sel} = H: 360-output mode Output pins S_{181} through S_{204} are invalid in 360-output mode.
SRC	Slew-rate control	Input (CMOS)	SRC = H: High-slew-rate mode (large current consumption) SRC = L: Low-slew-rate mode (small current consumption)
ORC	Output resistance control	Input (CMOS)	ORC = H: Low output resistance mode ORC = L: High output resistance mode
MODE	Output reset control	Input (CMOS)	MODE = H: Output reset MODE = L: No output reset

RxBIAS1	RxBIAS2	I_{BIAS}
L	L	I_1 (Low power)
L	H	I_2
H	L	I_3
H	H	I_4 (High power)

(2/2)

Pin Symbol	Pin Name	I/O	Description
V_{sel1}, V_{sel2}	V_{DD2} selector	Input (CMOS)	This pin controls the bias current of output amplifier. Logic input to V_{sel1} and V_{sel2} have a dependence on V_{DD2} and load condition and so on. Output waveform simulation should be done before decision. V_{sel1} / V_{sel2} / V_{DD2} Range (reference) L / L / 10.5 V TYP. L / H / 12.5 V TYP. H / L / 16.0 V TYP. H / H / Non-assign
V_0 to V_{19}	γ -corrected power supplies	–	Input the γ -corrected power supplies from outside. Make sure to maintain the following relationships. During the gray scale voltage output, be sure to keep the gray scale level power supply at a constant level. $V_{DD2} - 0.2\ V \geq V_0 > V_1 > V_2 > V_3 > V_4 > V_5 > V_6 > V_7 > V_8 > V_9 \geq 0.5\ V_{DD2}$ $0.5\ V_{DD2} \geq V_{10} > V_{11} > V_{12} > V_{13} > V_{14} > V_{15} > V_{16} > V_{17} > V_{18} > V_{19} \geq V_{SS2} + 0.2\ V$
V_{DD1D}	Low-voltage logic power supply	–	2.7 to 3.6 V V_{DD1D} and V_{DD1A} should be same electric potential.
V_{DD1A}	Low-voltage analog power supply	–	2.7 to 3.6 V V_{DD1D} and V_{DD1A} should be same electric potential.
V_{DD2}	Driver power supply	–	10.0 to 16.5 V
V_{SS1D}	Low-voltage logic ground	–	Ground for internal logic circuit. Please wire V_{SS1D} and V_{SS1A} in external circuit boards.
V_{SS1A}	Low-voltage analog ground	–	Ground for internal mini-LVDS receiver circuit. Please wire V_{SS1D} and V_{SS1A} in external circuit boards.
V_{SS2}	Driver ground	–	Ground for internal high voltage circuit.
TEST	TEST	Input (CMOS)	Please leave these pins open in normal operation mode.

Cautions 1. The power start sequence must be V_{DD1}, logic input, and V_{DD2} & V_0-V_{19} in that order. Reverse this sequence to shut down.

2. To stabilize the supply voltage, please be sure to insert a 0.47 μF bypass capacitor between V_{DD1}-V_{SS1} and V_{DD2}-V_{SS2}. Furthermore, for increased precision of the D/A converter, insertion of a bypass capacitor of about 0.01 μF is also advised between the γ-corrected power supply terminals (V_0, V_1, V_2,....., V_{19}) and V_{SS2}.

Table 4–1. Function (Bus-line Set-Back)

Pin Name	SB = L
D0A	$D_{0(+)}$
D0B	$D_{0(-)}$
D1A	$D_{1(+)}$
D1B	$D_{1(-)}$
CLKA	$CLK_{(+)}$
CLKB	$CLK_{(-)}$
D2A	$D_{2(+)}$
D2B	$D_{2(-)}$
D3A	$D_{3(+)}$
D3B	$D_{3(-)}$

Remark Suffix "+" indicates positive polarity and "–" indicates negative polarity at each differential signal input pair.

Table 4–2. Function (R,/L and STHR(L))

R,/L	STHR	STHL	Shift Direction
H (Right shift)	IN	OUT	$S_1 \rightarrow S_{384}$
L (Left shift)	OUT	IN	$S_{384} \rightarrow S_1$

Table 4–3. Function (POL and γ-corrected power supplies)

POL	Odd Numbered Output	Even Numbered Output
H	V_{10}-V_{19}	V_0-V_9
L	V_0-V_9	V_{10}-V_{19}

5. RELATIONSHIP BETWEEN INPUT DATA AND OUTPUT VOLTAGE VALUE

μPD160010 incorporates a 8-bit D/A converter whose odd output pins and even output pins output respectively gray scale voltages of differing polarity with respect to the LCD's counter electrode (common electrode) voltage. The D/A converter consists of ladder resistors and switches.

Figure 5–1 shows the relationship between the driving voltages such as liquid-crystal driving voltages V_{DD2}, V_{SS2} and common electrode potential V_{COM}, and γ -corrected voltages V_0-V_{19} and the input data. Be sure to maintain the voltage relationships of below.

$$V_{DD2} - 0.2\ V \geq V_0 > V_1 > V_2 > V_3 > V_4 > V_5 > V_6 > V_7 > V_8 > V_9 \geq 0.5\ V_{DD2}$$

$$0.5\ V_{DD2} \geq V_{10} > V_{11} > V_{12} > V_{13} > V_{14} > V_{15} > V_{16} > V_{17} > V_{18} > V_{19} \geq V_{SS2} + 0.2\ V$$

Figures 5–2 shows γ-corrected power supply and ladder resistors ratio and figure 5–3 shows the relationship between the input data and the output data.

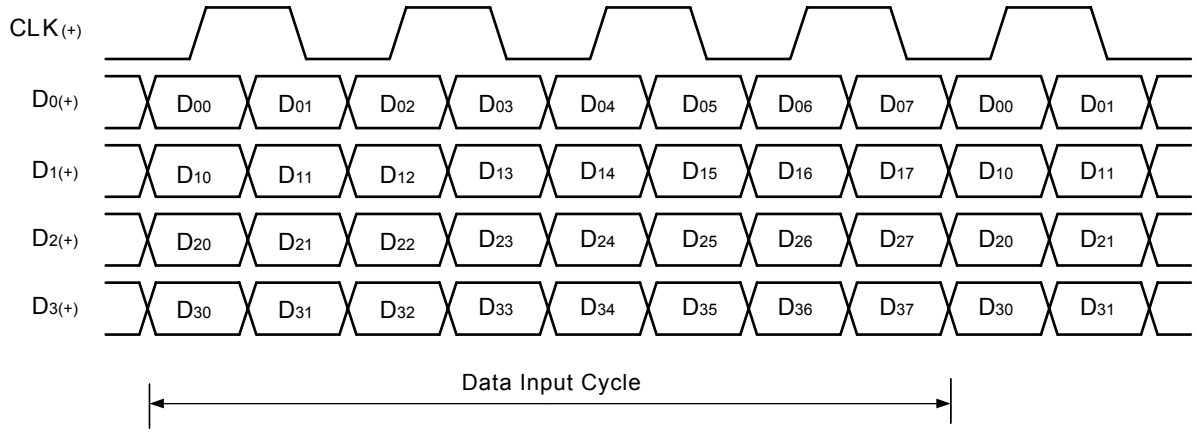
6. FUNCTION DESCRIPTION

6.1 Input Data Mapping

Display data and control data (RST) are input to $D_{0(+/-)}$ to $D_{3(+/-)}$.

Data mapping is changed in response to the mode, and the mode is changed by STB.

<Data Input Mode>



6.2 Composition of Display Data

MSB							LSB
Dn7	Dn6	Dn5	Dn4	Dn3	Dn2	Dn1	Dn0

Remark n = 0 to 3

6.3 Relation between Display Data and Output Number

This relationship is irrespective of R,/L condition.

(1) In case of 384 channel output

(a) Right shift (R,/L = H)

Output	S_1	S_2	S_3	→	S_{382}	S_{383}	S_{384}
Display Data	D_{00} to D_{07}	D_{10} to D_{17}	D_{20} to D_{27}	→	D_{10} to D_{17}	D_{20} to D_{27}	D_{30} to D_{37}

(b) Left shift (R,/L = L)

Output	S_{384}	S_{383}	S_{382}	→	S_3	S_2	S_1
Display Data	D_{30} to D_{37}	D_{20} to D_{27}	D_{10} to D_{17}	→	D_{20} to D_{27}	D_{10} to D_{17}	D_{00} to D_{07}

(2) In case of 360 channel output

(a) Right shift (R,/L = H)

Output	S_1	S_2	S_3	→	S_{180}	S_{181} to S_{204}	S_{205}	→	S_{382}	S_{383}	S_{384}
Display Data	D_{00} to D_{07}	D_{10} to D_{17}	D_{20} to D_{27}	→	D_{30} to D_{37}	NA	D_{00} to D_{07}	→	D_{10} to D_{17}	D_{20} to D_{27}	D_{30} to D_{37}

Remark NA: Non-assign

(b) Left shift (R,/L = L)

Output	S_{384}	S_{383}	S_{382}	→	S_{205}	S_{204} to S_{181}	S_{180}	→	S_3	S_2	S_1
Display Data	D_{30} to D_{37}	D_{20} to D_{27}	D_{10} to D_{17}	→	D_{00} to D_{07}	NA	D_{30} to D_{37}	→	D_{20} to D_{27}	D_{10} to D_{17}	D_{00} to D_{07}

Remark NA: Non-assign

6.4 Cascade

Multiple chips can be used in a cascade connection.

- Input STHR(L) pad at lead (head) chip is fixed to H.
- Input STHR(L) after secondary chips are connected from output STHR(L) at foregoing chip.
- Output STHR(L) of final stage driver IC can support current load up to ±1.0 mA (MAX.) by using pull-up or pull-down resistor.

6.5 Taking in the Display Data

(1) The lead (head) chip is set to control signal input mode (so called control mode),
and the receivers at $D_{0(+/-)}$ and $CLK_{(+/-)}$ of all chips are activated by rising edge of STB.

(2) Input the reset (RST) signal as L to $D_{0(+/-)}$. This RST should be kept over 200 ns after rising of STB.

(3) RST as H is input to $D_{0(+/-)}$ and H width should be over 50 ns and also over 3 CLK cycles.

(4) Input the RST as L to $D_{0(+/-)}$ and then changed to the data input mode function.
By the way, input STB again when a second RST is necessary.

(5) Data sampling starts at the rising edge of CLK after reading of "RST = L".

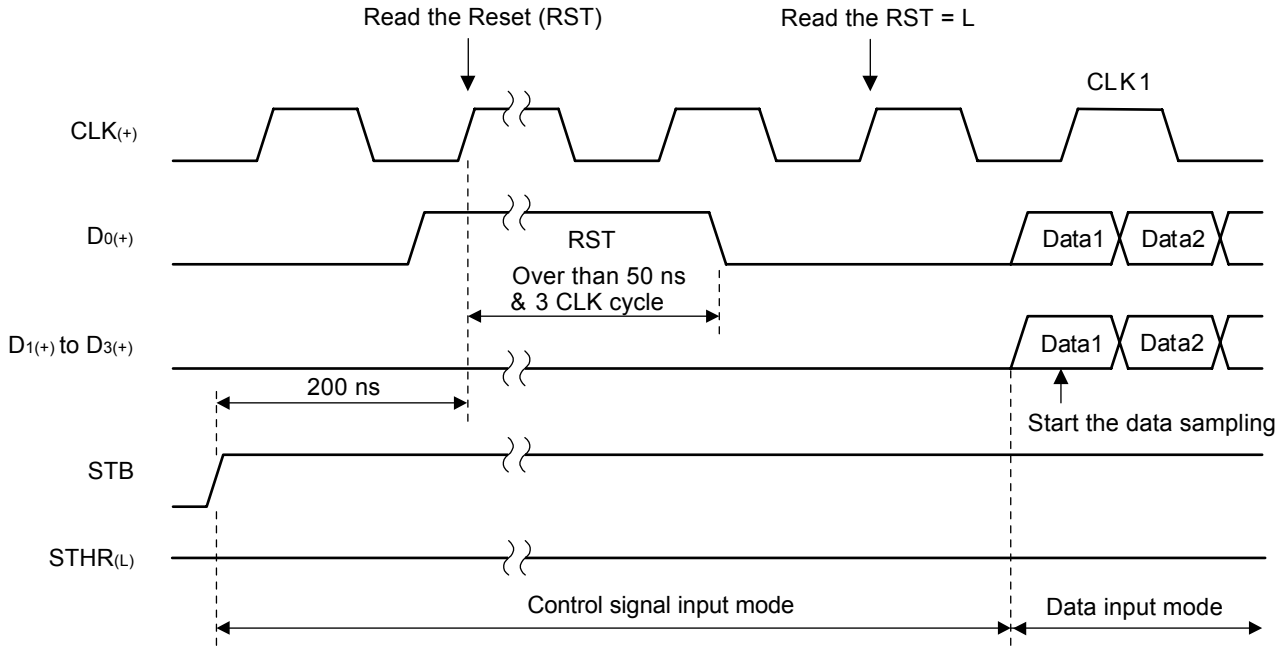
(6) At the same time data sampling starts, internal counter starts counting the data cycle for STHR(L) signal generation.

(7) After data sampling is finished, the receivers turn OFF.

(8) After the receivers turn OFF, keep the timing for more than 5 CLK cycles until STB is applied.

(9) Figure 6–1 shows the rough timing chart from application of STB to the start of data sampling.

Figure 6–1 Timing from Start to Sampling (reference)



7. ELECTRICAL SPECIFICATIONS

Absolute Maximum Ratings (T_A = 25°C, V_{SS1} = V_{SS2} = 0 V)

Parameter	Symbol	Ratings	Unit
Logic power supply voltage	V_{DD1}	−0.5 to +4.0	V
Driver power supply voltage	V_{DD2}	−0.5 to +18.0	V
Logic input voltage	V_{I1}	−0.5 to V_{DD1} + 0.5	V
Logic output voltage	V_{O1}	−0.5 to V_{DD1} + 0.5	V
Logic output current	I_O	± 1.0	mA
Driver input voltage	V_{I2}	−0.5 to V_{DD2} + 0.5	V
Driver output voltage	V_{O2}	−0.5 to V_{DD2} + 0.5	V
Operating ambient temperature	T_A	−10 to +90	°C
Storage temperature	T_{stg}	−55 to +125	°C

Caution Product quality may suffer if the absolute maximum rating is exceeded even momentarily for any parameter. That is, the absolute maximum ratings are rated values at which the product is on the verge of suffering physical damage, and therefore the product must be used under conditions that ensure that the absolute maximum ratings are not exceeded.

Recommended Operating Range (T_A = –10 to +90 °C, V_{SS1} = V_{SS2} = 0 V)

Parameter	Symbol	Condition	MIN.	TYP.	MAX.	Unit
Logic power supply voltage	V_{DD1}		2.7	3.0	3.6	V

Parameter	Symbol	Condition	MIN.	TYP.	MAX.	Unit
Input leakage current	I_{IL}	STHR(L), R,/L, STB, SB, POL, O_{sel}, RxBIAS1, RxBIAS2, SRC, ORC, V_{sel1}, V_{sel2}, CLKA, CLKB, D0A, D0B to D3A, D3B			± 1.0	μA
γ-corrected resistor value	R_γ	V_0-V_9 = V_{10} -V_{19}	7.8	12.0	16.3	kΩ
Driver output current	I_{VOH}	V_X = V_{DD2} – 0.2 V, V_{OUT} = V_X – 1.0 V Note1, low output resistance mode (ORC = H)		– 334	– 200	μA
	I_{VOL}	V_X = V_{SS2} + 0.2 V, V_{OUT} = V_X + 1.0 V Note1, low output resistance mode (ORC = H)	360	527		μA
Output swing voltage difference deviation Note2	ΔV_{P-P1}	Input: 00H to 3FH		± 10	± 20	mV
	ΔV_{P-P2}	Input: 40H to 7FH, 80H to BFH		± 7	± 15	mV
	ΔV_{P-P3}	Input: C0H to FFH		± 4	± 10	mV
Output swing voltage average deviation Note3	AV_O	Input: 3FH, 7FH, BFH		± 16	± 20	mV
Logic dynamic current consumption	I_{DD11}	Checkered, f_{STB} = 100 kHz (PW = 500 ns), f_{CLK} =159 MHz, V_{DD1} = 3.6 V			7.50	mA
Logic static current consumption	I_{DD12}	No CLK & Input, V_{DD1} = 3.6 V			4.50	mA
Driver dynamic current consumption	I_{DD21}	Raster pattern, V_{DD2} = 16.5 V, f_{STB} = 100 kHz (PW = 500 ns), with no load			30.0	mA
Driver static current consumption	I_{DD22}	Raster pattern, V_{DD2} = 16.5 V, Input: FFH, with no load			30.0	mA

★ **Notes1.** V_X refers to the output voltage of analog output pins S_1 to S_{384}.
V_{OUT} refers to the voltage applied to analog output pins S_1 to S_{384}.

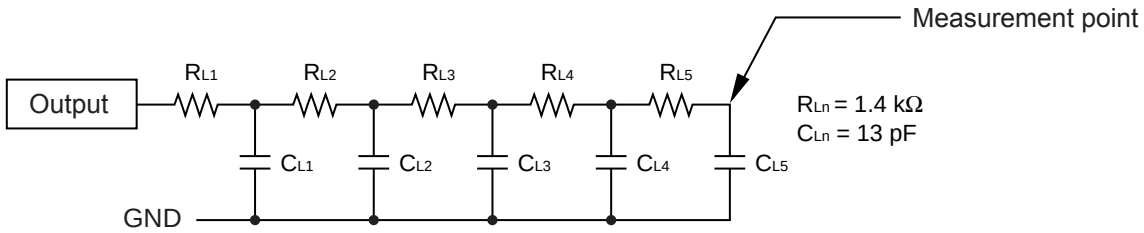
2. Amplitude offset when all of output ports out same data.

3. Deviation of averaged amplitude offset value between chips.

Switching Characteristics (T_A = 25 °C, V_{DD1} = 3.0 V, V_{DD2} = 13.0 V, V_{SS1} = V_{SS2} = 0 V)

Parameter	Symbol	Condition	MIN.	TYP.	MAX.	Unit
Start pulse delay time	t_1	C_L = 50 pF	6	15	22	ns
Driver output delay time	t_2	R_L = 7 kΩ, C_L = 65 pF		2.1	2.5	μs
	t_3	Refer to <Test Condition >		3.9	5.0	μs
	t_4			1.3	2.5	μs
	t_5			3.4	5.0	μs
Input capacitance	C_{I1}	CMOS interface, STHR(L)		10	15	pF
	C_{I2}	mini-LVDS interface, Except STHR(L), V_0-V_{19}		5	10	pF

<Test Condition>



Timing Requirements (T_A = 25 °C, V_{DD1} = 3.0 V, V_{SS1} = 0 V, t_r = t_f = 0.5 ns)

Parameter	Symbol	Condition	MIN.	TYP.	MAX.	Unit
Clock pulse width	t_6		5.2	6.2		ns
Clock pulse high period	t_7		2.1	2.6		ns
Clock pulse low period	t_8		2.1	2.6		ns
Data setup time	t_9		1.0			ns
Data hold time	t_{10}		1.0			ns
Start pulse setup time	t_{11}		0			ns
STB pulse width	t_{13}		200			ns
POL setup time	t_{14}		–5.0			ns
RST high period	t_{16}		50.0			ns
			3			CLK
Receiver OFF to STB timing	t_{17}		5			CLK
STB to RST input time	t_{18}		200			ns

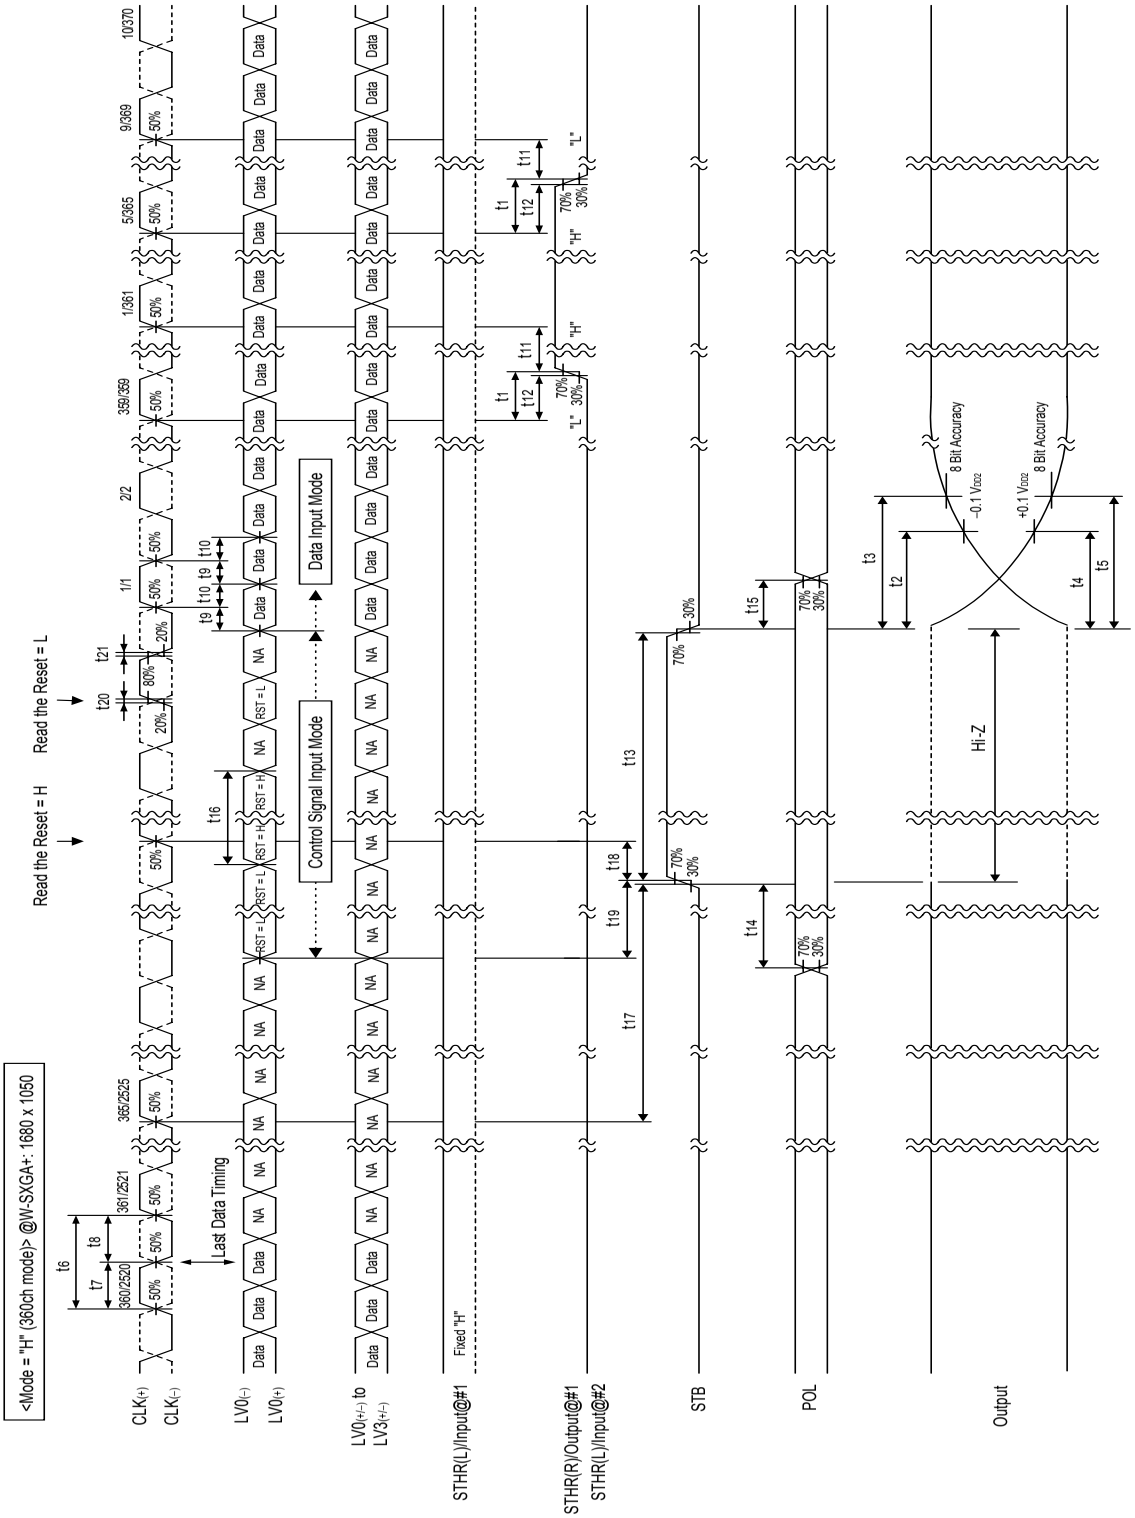
Remark Unless otherwise specified, V_{IH} and V_{IL} of the CMOS signals are defined as V_{IH} = 0.7 V_{DD1}, V_{IL} = 0.3 V_{DD1}.

Switching Characteristic Waveform (R,/L = H)

Unless otherwise specified, V_{IH} and V_{IL} of the CMOS signals are defined as V_{IH} = 0.7 V_{DD1}, V_{IL} = 0.3 V_{DD1}.

Also, unless otherwise specified, V_{IH} and V_{IL} of the mini-LVDS signals are defined as V_{IH} = V_{IL} = V_I (Center of V_{ID}).

(Clock and display data numbers are examples when W-SXGA+ is used.)



★ 8. RECOMMENDED MOUNTING CONDITIONS

The following conditions must be met for mounting conditions of the μPD160010.

For more details, refer to the

[Semiconductor Device Mount Manual] (http://www.necel.com/pkg/en/mount/index.html)

Please consult with our sales offices in case other mounting process is used, or in case the mounting is done under different conditions.

μPD160010N-xxx: TCP (TAB Package)

Mounting Condition	Mounting Method	Condition
Thermocompression	Soldering	Heating tool 300 to 350°C, heating for 2 to 3 sec, pressure 100g (per solder).
	ACF (Adhesive Conductive Film)	Temporary bonding 70 to 100°C, pressure 3 to 8 kg/cm^2, time 3 to 5 sec. Real bonding 165 to 180°C pressure 25 to 45 kg/cm^2, time 30 to 40 sec. (When using the anisotropy conductive film SUMIZAC1003 of Sumitomo Bakelite, Ltd.)

Caution To find out the detailed conditions for mounting the ACF part, please contact the ACF manufacturing company. Be sure to avoid using two or more mounting methods at a time.

NOTES FOR CMOS DEVICES

① VOLTAGE APPLICATION WAVEFORM AT INPUT PIN

Waveform distortion due to input noise or a reflected wave may cause malfunction. If the input of the CMOS device stays in the area between V_{IL} (MAX) and V_{IH} (MIN) due to noise, etc., the device may malfunction. Take care to prevent chattering noise from entering the device when the input level is fixed, and also in the transition period when the input level passes through the area between V_{IL} (MAX) and V_{IH} (MIN).

② HANDLING OF UNUSED INPUT PINS

Unconnected CMOS device inputs can be cause of malfunction. If an input pin is unconnected, it is possible that an internal input level may be generated due to noise, etc., causing malfunction. CMOS devices behave differently than Bipolar or NMOS devices. Input levels of CMOS devices must be fixed high or low by using pull-up or pull-down circuitry. Each unused pin should be connected to V_{DD} or GND via a resistor if there is a possibility that it will be an output pin. All handling related to unused pins must be judged separately for each device and according to related specifications governing the device.

③ PRECAUTION AGAINST ESD

A strong electric field, when exposed to a MOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop generation of static electricity as much as possible, and quickly dissipate it when it has occurred. Environmental control must be adequate. When it is dry, a humidifier should be used. It is recommended to avoid using insulators that easily build up static electricity. Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work benches and floors should be grounded. The operator should be grounded using a wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions need to be taken for PW boards with mounted semiconductor devices.

④ STATUS BEFORE INITIALIZATION

Power-on does not necessarily define the initial status of a MOS device. Immediately after the power source is turned ON, devices with reset functions have not yet been initialized. Hence, power-on does not guarantee output pin levels, I/O settings or contents of registers. A device is not initialized until the reset signal is received. A reset operation must be executed immediately after power-on for devices with reset functions.

Quality Grades On NEC Semiconductor Devices (C11531E)

- **The information in this document is current as of March 2004. The information is subject to change without notice. For actual design-in, refer to the latest publications of NEC Electronics data sheets or data books, etc., for the most up-to-date specifications of NEC Electronics products. Not all products and/or types are available in every country. Please check with an NEC Electronics sales representative for availability and additional information.**
- No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Electronics. NEC Electronics assumes no responsibility for any errors that may appear in this document.
- NEC Electronics does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from the use of NEC Electronics products listed in this document or any other liability arising from the use of such products. No license, express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Electronics or others.
- Descriptions of circuits, software and other related information in this document are provided for illustrative purposes in semiconductor product operation and application examples. The incorporation of these circuits, software and information in the design of a customer's equipment shall be done under the full responsibility of the customer. NEC Electronics assumes no responsibility for any losses incurred by customers or third parties arising from the use of these circuits, software and information.
- While NEC Electronics endeavors to enhance the quality, reliability and safety of NEC Electronics products, customers agree and acknowledge that the possibility of defects thereof cannot be eliminated entirely. To minimize risks of damage to property or injury (including death) to persons arising from defects in NEC Electronics products, customers must incorporate sufficient safety measures in their design, such as redundancy, fire-containment and anti-failure features.
- NEC Electronics products are classified into the following three quality grades: "Standard", "Special" and "Specific".
  The "Specific" quality grade applies only to NEC Electronics products developed based on a customer-designated "quality assurance program" for a specific application. The recommended applications of an NEC Electronics product depend on its quality grade, as indicated below. Customers must check the quality grade of each NEC Electronics product before using it in a particular application.
  "Standard": Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots.
  "Special": Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support).
  "Specific": Aircraft, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems and medical equipment for life support, etc.

The quality grade of NEC Electronics products is "Standard" unless otherwise expressly specified in NEC Electronics data sheets or data books, etc. If customers wish to use NEC Electronics products in applications not intended by NEC Electronics, they must contact an NEC Electronics sales representative in advance to determine NEC Electronics' willingness to support a given application.

(Note)
(1) "NEC Electronics" as used in this statement means NEC Electronics Corporation and also includes its majority-owned subsidiaries.
(2) "NEC Electronics products" means any product developed or manufactured by or for NEC Electronics (as defined above).
