DESCRIPTION

The 74V1T86 is an advanced high-speed CMOS SINGLE EXCLUSIVE OR GATE fabricated with sub-micron silicon gate and double-layer metal wiring C^2MOS technology. It has similar high speed performance of equivalent Bipolar Schottky TTL combined with true CMOS low

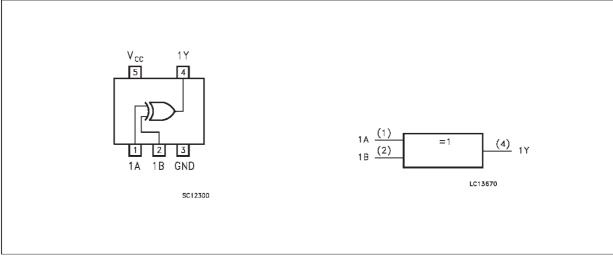

power dissipation.

Power down protection is provided on all inputs and output and 0 to 7V can be accepted on inputs with no regard to the supply voltage. This device can be used to interface 5V to 3V.

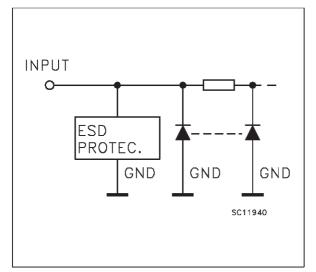

All inputs and output are equipped with protection circuits against static discharge, giving them 2KV ESD immunity and transient excess voltage.
