

# HIGH POWER CHIP RESISTORS & TERMINATIONS

50 & 100 OHMS

## SERIES PPC, NPC

### GENERAL INFORMATION:

When mounted on an appropriate heat sink, these chip devices provide high power dissipation in terminations and as balancing resistors in Wilkenson power divider networks. Laser trimming provides maximum peak and average R.F. power capability.

### GENERAL SPECIFICATIONS:

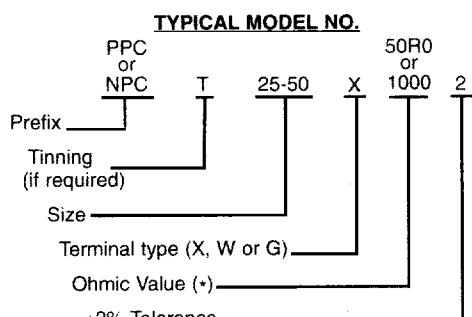

<b>DC Voltage (Max):</b>	$E = \sqrt{PR}$
<b>Resistive Tolerance:</b>	$\pm 2\%$ standard
<b>Solderable Terminals:</b>	Electroplated Silver over Nickel (PPC) Gold over Nickel alloy (NPC)
<b>Substrate:</b>	Beryllium Oxide Ceramic
<b>Resistive Element:</b>	Thin Film
<b>Environment:</b>	Meets applicable portions of MIL-R-55342

#### NOTES:

- The "L" and "T" dimensions are for the substrate only and do not include terminal thickness or optional tinning thickness.
- Thermal Resistance ( $R\Theta^{\circ}$ ) is measured in  $^{\circ}\text{C}/\text{W}$  between resistive film and mounting surface.
- The CW power rating is based on maximum film temperature of  $+150^{\circ}\text{C}$  and with maximum heatsink temperature of  $+100^{\circ}\text{C}$ . Power is based on infinite and ideal heatsink. Type "W" termination style does not have full back plane metallization and typically handles less power.

\*NOTE: Resistance value is expressed using military 4-digit call-out.  
 50R0 = 50 ohms  
 1000 = 100 ohms  
 Other values from 10–500 ohms available. Contact factory.
