

### POWER MANAGEMENT

#### Description

The SC1563 is a high performance positive voltage regulator designed for use in applications requiring very low dropout voltage at up to 500mA. Since it has superior dropout characteristics compared to regular LDOs, it can be used to supply 2.5V on motherboards or 2.8V on peripheral cards from the 3.3V supply with no heatsink. Additionally, the SC1563 has a shutdown pin to further reduce power dissipation while shut down. The SC1563 provides excellent regulation over variations in line, load and temperature.

A wide range of fixed output voltage options are available. In addition, the output voltage of every device can be adjusted between 1.2V and 4.8V using external resistors. The SC1563 comes in the space saving 5-pin SOT-23 package.

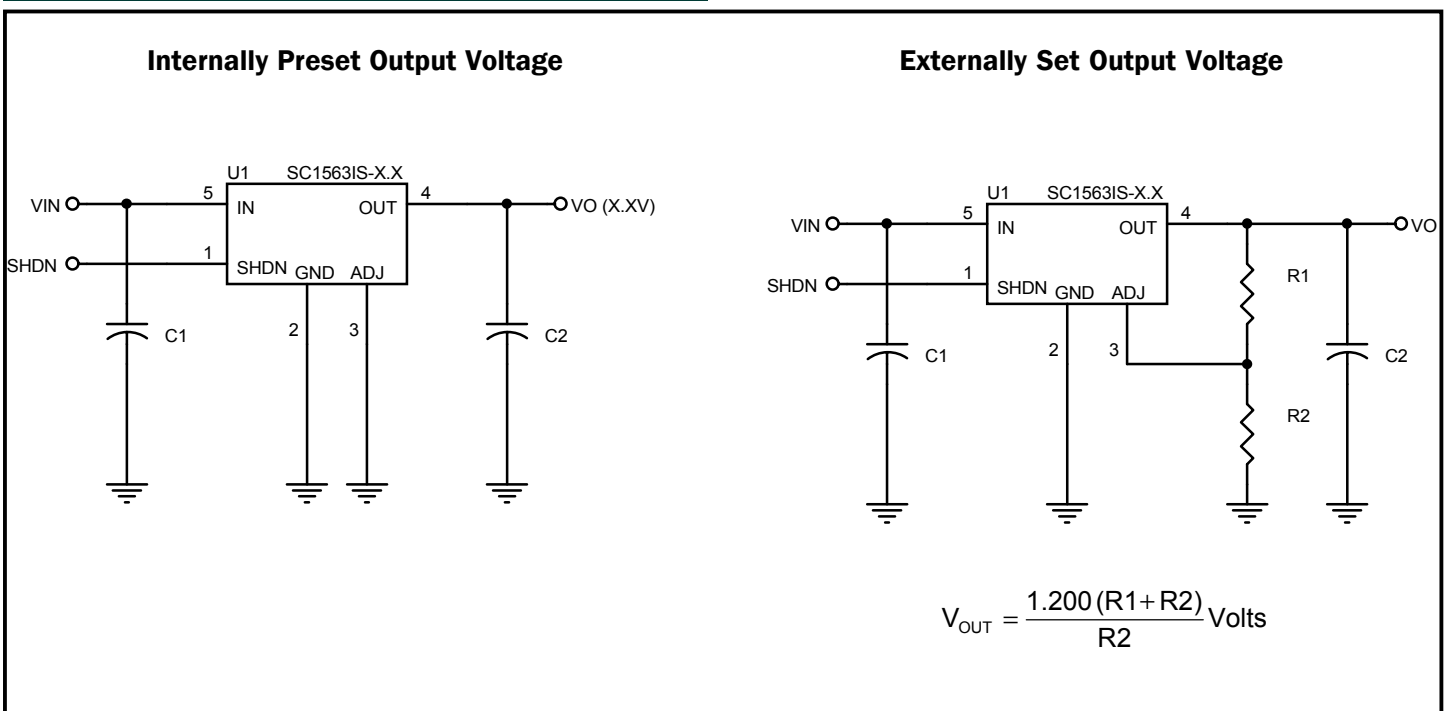

#### Features

- ◆ 350mV dropout @ 500mA
- ◆ Designed to operate with ceramic capacitors
- ◆ Adjustable output from 1.2V to 4.8V
- ◆ Multiple output voltage options (all parts also adjustable externally using resistors)
- ◆ Over current and over temperature protection
- ◆ 2µA quiescent current in shutdown
- ◆ No minimum load current requirement
- ◆ Low reverse leakage (output to input)
- ◆ Full industrial temperature range
- ◆ 5-pin SOT-23 surface mount package. Also available in Lead-free, fully WEEE and RoHS compliant

#### Applications

- ◆ Personal Digital Assistants
- ◆ Battery powered systems
- ◆ Motherboards
- ◆ Peripheral cards
- ◆ PCMCIA cards

#### Typical Application Circuits

**POWER MANAGEMENT**
**Absolute Maximum Ratings**

Exceeding the specifications below may result in permanent damage to the device, or device malfunction. Operation outside of the parameters specified in the Electrical Characteristics section is not implied.

Parameter	Symbol	Maximum	Units
Input Voltage	$V_{IN}$	-0.3 to 7	V
Shutdown Voltage	$V_{SHDN}$	-0.3 to $V_{IN}$	V
Power Dissipation	$P_D$	Internally Limited	W
Thermal Resistance Junction to Ambient <sup>(1)</sup>	$\theta_{JA}$	175	°C/W
Operating Ambient Temperature Range	$T_A$	-40 to 85	°C
Operating Junction Temperature Range	$T_J$	-40 to 150	°C
Storage Temperature Range	$T_{STG}$	-65 to 150	°C
Lead Temperature (Soldering) 10 sec	$T_{LEAD}$	300	°C
ESD Rating	$V_{ESD}$	2	kV

**Note:**

(1) Minimum pad size.

**Electrical Characteristics**

Unless specified:  $V_{SHDN} = 0V$ , Adjustable mode ( $V_{ADJ} > V_{TH(ADJ)}$ ):  $V_{IN} = 2.2V$  to  $5.5V$  and  $I_{OUT} = 0A$  to  $500mA$ , Fixed mode ( $V_{ADJ} = GND$ ):  $V_{IN} = (V_{OUT} + 0.7V)$  to  $5.5V$  and  $I_{OUT} = 0A$  to  $500mA$ . Values in **bold** apply over full operating temperature range.

Parameter	Symbol	Conditions	Min	Typ	Max	Units
<b>IN</b>						
Supply Voltage Range	$V_{IN}$		<b>2.2</b>		<b>6.5</b>	V
Quiescent Current	$I_Q$	$V_{IN} = 3.3V$		85	<b>150</b>	$\mu A$
		$V_{IN} = 6.5V, V_{SHDN} = \text{Open}$		0.01	<b>2.00</b>	$\mu A$
<b>OUT</b>						
Output Voltage <sup>(1)</sup> (Internal Fixed Voltage)	$V_{OUT}$	$V_{IN} = V_{OUT} + 0.7V, I_{OUT} = 10mA$	-1%	$V_{OUT}$	+1%	V
			-2%		+2%	
Line Regulation <sup>(1)</sup>	$REG_{(LINE)}$	$V_{IN} = (V_{OUT} + 0.25V)$ to $5.5V, I_{OUT} = 10mA$		0.1	<b>0.4</b>	%
Load Regulation <sup>(1)</sup>	$REG_{(LOAD)}$	$V_{IN} = V_{OUT} + 0.7V$		0.15	<b>0.40</b>	%

<b>SHDN</b>						
Shutdown Pin Current	$I_{SHDN}$	$V_{SHDN} = 0V, V_{IN} = 3.3V$		1.5	<b>5.0</b>	$\mu A$
Shutdown Pin Threshold	$V_{IH}$	$V_{IN} = 3.3V$	<b>1.8</b>			V
	$V_{IL}$	$V_{IN} = 3.3V$			<b>0.4</b>	
<b>Over Temperature Protection</b>						
High Trip Level	$T_{HI}$			170		$^{\circ}C$
Hysteresis	$T_{HYST}$			10		$^{\circ}C$

**Notes:**

- (1) Low duty cycle pulse testing with Kelvin connections required.
- (2) Defined as the input to output differential at which the output voltage drops to 1% below the value measured at a differential of 0.7V for  $2.5V \leq V_{OUT} \leq 3.4V$ . Not measurable on outputs less than 2.2V due to minimum  $V_{IN}$  constraints. See typical characteristics curves.
- (3) Guaranteed by design.
- (4) When  $V_{ADJ}$  exceeds this threshold, the "Sense Select" switch disconnects the internal feedback chain from the error amplifier and connects  $V_{ADJ}$  instead.

## POWER MANAGEMENT

### Pin Configurations

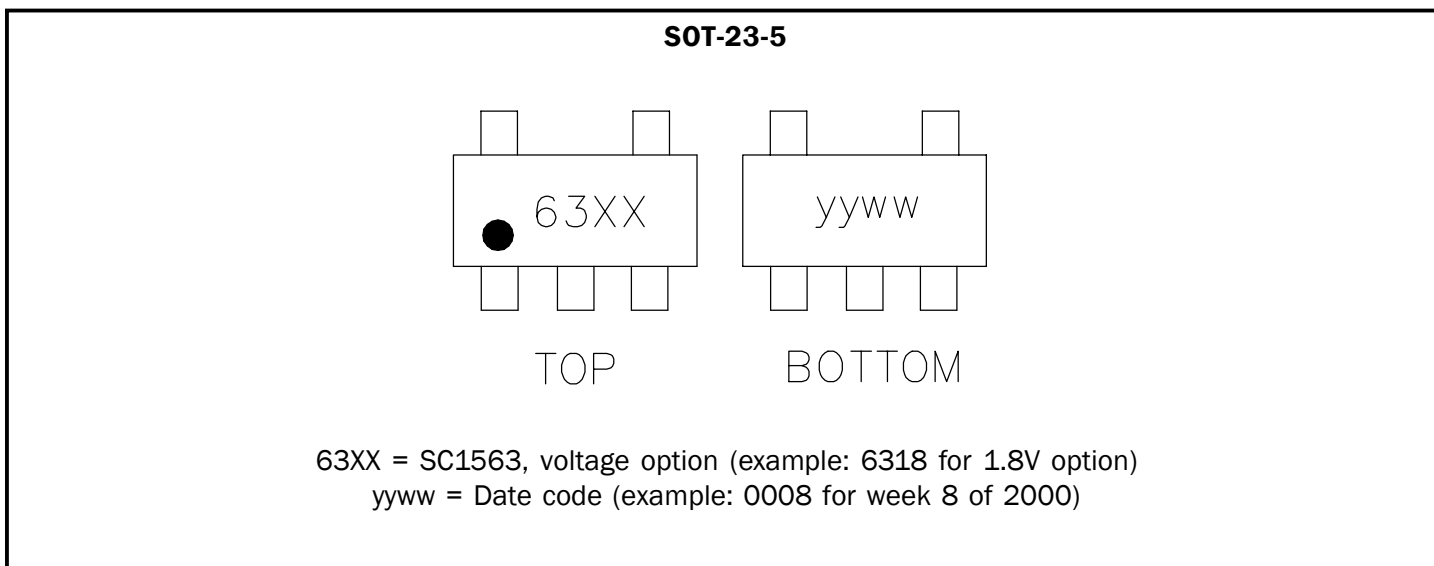

### Ordering Information

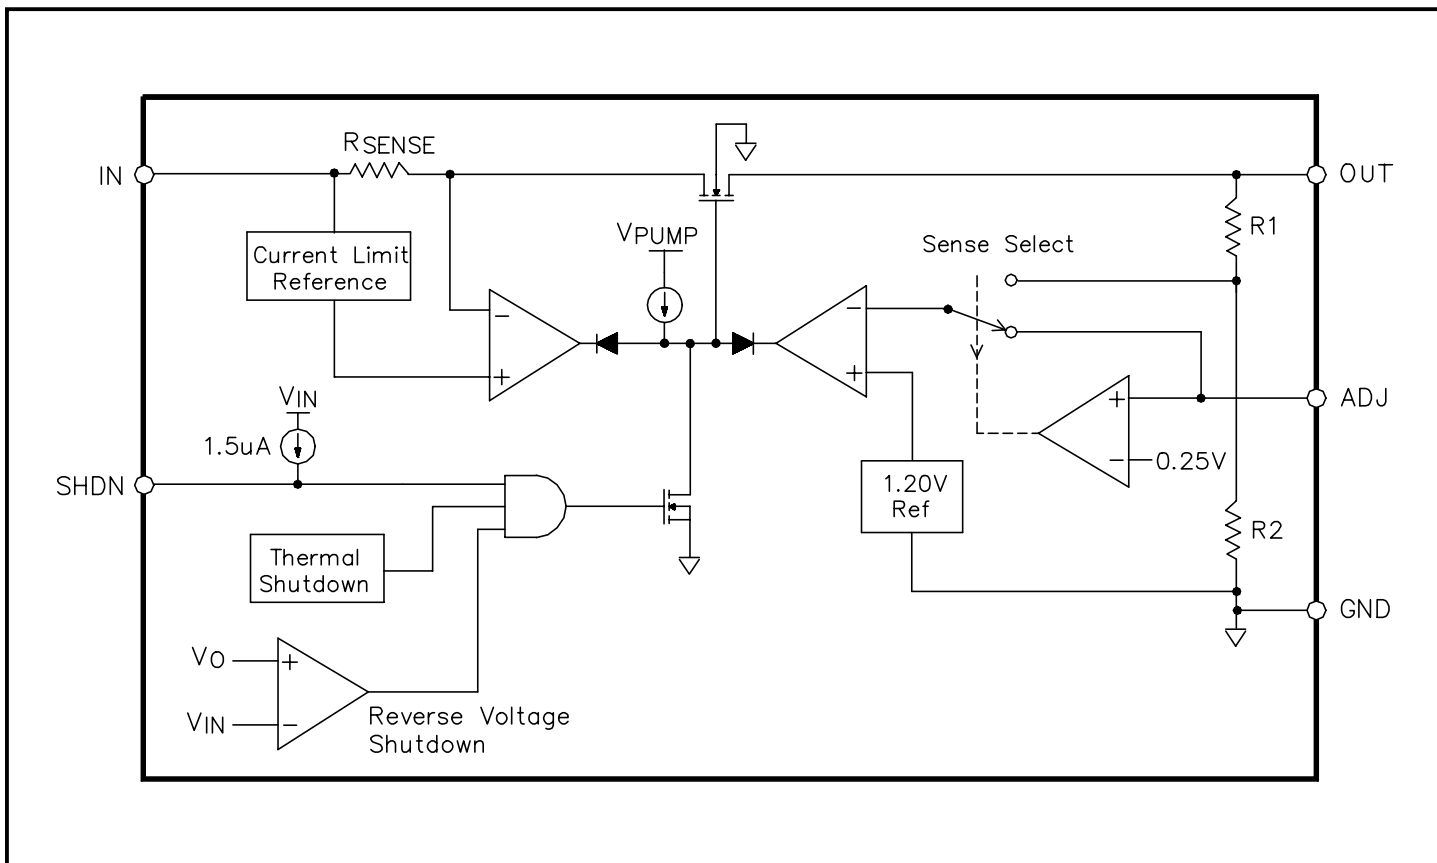

Part Number <sup>(1)(2)(3)</sup>	Package
SC1563ISK-X.XTR	SOT-23-5
SC1563ISK-X.XTRT <sup>(4)</sup>	

**Notes:**

- (1) Where -X.X denotes voltage options. Available voltages are: 1.8V, 2.5V, 2.8V, 3.0V, 3.1V and 3.3V.
- (2) Output voltage can be adjusted using external resistors, see Pin Descriptions.
- (3) Only available in tape and reel packaging. A reel contains 3000 devices.
- (4) Lead free product. This product is fully WEEE and RoHS compliant.

### Marking Information

**POWER MANAGEMENT**
**Block Diagram**

**Pin Descriptions**

Pin #	Pin Name	Pin Function
1	SHDN	Shutdown Input. Leaving this pin open turns the regulator off, reducing the quiescent current to a fraction of its operating value (typically < 300nA). The device will be enabled if this pin is pulled below 0.4V. Connect to GND if not being used.
2	GND	Reference ground. This pin may be used for heatsinking purposes.
3	ADJ	This pin, when grounded, sets the output voltage to that set by the internal feedback resistors. If external feedback resistors are used, the output voltage will be (See Application Circuit on page 1): $V_{OUT} = \frac{1.200(R1+R2)}{R2} \text{Volts}$
4	OUT	This pin is the power output of this device, sourcing up to 500mA.
5	IN	Input voltage. For regulation at full load, the input to this pin must be between ( $V_{OUT} + 0.7V$ ) and 6.5V. Minimum $V_{IN} = 2.2V$ .

**POWER MANAGEMENT**
**Applications Information**
**Introduction**

The SC1563 is intended for applications such as graphics cards where high current capability and very low dropout voltage are required. It provides a very simple, low cost solution that uses little pcb real estate. Additional features include a shutdown pin to allow for a very low power consumption standby mode, and a fully adjustable output.

**Component Selection**

**Input capacitor** - a 1 $\mu$ F ceramic capacitor is recommended. This allows for the device being some distance from any bulk capacitance on the rail. Additionally, input droop due to load transients is reduced, improving load transient response. Additional capacitance may be added if required by the application.

**Output capacitor** - a minimum bulk capacitance of 1 $\mu$ F, along with a 0.1 $\mu$ F ceramic decoupling capacitor is recommended. Increasing the bulk capacitance will improve the overall transient response. The use of multiple lower value ceramic capacitors in parallel to achieve the desired bulk capacitance will not cause stability issues. Although designed for use with ceramic output capacitors, the SC1563 is extremely tolerant of output capacitor ESR values and thus will also work comfortably with tantalum output capacitors.

**Noise immunity** - in very electrically noisy environments, it is recommended that 0.1 $\mu$ F ceramic capacitors be placed from IN to GND and OUT to GND as close to the device pins as possible.

**External voltage selection resistors** - the use of 1% resistors, and designing for a current flow  $\geq 10\mu$ A is recommended to ensure a well regulated output (thus  $R2 \leq 120k\Omega$ ).

**Thermal Considerations**

The power dissipation in the SC1563 is approximately equal to the product of the output current and the input to output voltage differential:

$$P_D \approx (V_{IN} - V_{OUT}) \cdot I_{OUT}$$

The absolute worst-case dissipation is given by:

$$P_{D(MAX)} = (V_{IN(MAX)} - V_{OUT(MIN)}) \cdot I_{OUT(MAX)} + V_{IN(MAX)} \cdot I_{Q(MAX)}$$

For a typical scenario,  $V_{IN} = 3.3V \pm 5\%$ ,  $V_{OUT} = 2.5V$  and  $I_{OUT} = 500mA$ , therefore:

$$\begin{aligned} V_{IN(MAX)} &= 3.465V, \\ V_{OUT(MIN)} &= 2.450V \text{ and} \\ I_{Q(MAX)} &= 150\mu A, \end{aligned}$$

$$\text{Thus } P_{D(MAX)} = 0.508W.$$

Using this figure, and assuming  $T_{A(MAX)} = 70^\circ C$ , we can calculate the maximum thermal impedance allowable to maintain  $T_J \leq 150^\circ C$ :

$$R_{TH(J-A)(MAX)} = \frac{(T_{J(MAX)} - T_{A(MAX)})}{P_{D(MAX)}} = \frac{(150 - 70)}{0.508} = 157^\circ C/W$$

This should be achievable with the SOT-23-5 package using pcb copper area to aid in conducting the heat away from the device. Internal ground/power planes and air flow will also assist in removing heat.
