

Am29030™ and Am29035™

RISC Microprocessors with 8-Kbyte/4-Kbyte Instruction Cache

Advanced
Micro
Devices

Am29030 MICROPROCESSOR DISTINCTIVE CHARACTERISTICS

- Full 32-bit architecture
- 26 million instructions per second (MIPS) sustained at 33 MHz
- 8-Kbyte, two-way set-associative instruction cache
- 33- and 25-MHz operating frequencies
- Scalable Clocking™ technology
- Programmable 16- or 32-bit data bus width
- CMOS technology/TTL-compatible
- 4-Gbyte virtual address space with demand paging
- Streamlined system interface for simplified, high-frequency operation
- Burst-mode and page-mode access support
- 8-, 16-, or 32-bit ROM interface
- 64-entry Memory Management Unit on-chip
- Fully pipelined
- On-chip timer facility
- 192 general-purpose registers
- Three-address instruction architecture
- Master/slave chip/output checking
- Software compatible with Am29005™ and Am29000® microprocessors
- Advanced debugging support
- IEEE Std 1149.1-1990 (JTAG) compliant Standard Test Access Port and Boundary Scan Architecture implementation

Am29035 MICROPROCESSOR DISTINCTIVE CHARACTERISTICS

The Am29035™ microprocessor is similar to the Am29030™ microprocessor except for the following differences:

- 4-Kbyte, direct-mapped instruction cache
- 16-MHz operating frequency
- 12 million instructions per second (MIPS) sustained at 16 MHz

GENERAL DESCRIPTION

The Am29030 and Am29035 RISC microprocessors are high-performance, general-purpose, 32-bit microprocessors implemented in CMOS technology. Through high circuit densities and a high degree of on-chip integration, the Am29030 and Am29035 microprocessors are capable of operating at high internal frequencies while providing the designer with a simple streamlined external interface.

The Am29030 and Am29035 microprocessors were designed to meet the common requirements of embedded applications such as laser beam printers, graphics processors, X terminals and servers, Application Program Interface (API) accelerators, and scanners. The Am29030 and Am29035 microprocessors are well suited for these applications since they provide high

performance at low cost, and offer the designer complete design flexibility. Coupled with hardware and software development tools from AMD® and AMD's Fusion29K® partners, no design is ever far from the marketplace.

The Am29030 microprocessor is available in a 145-lead pin-grid-array (PGA) package and a 144-pin cerquad package. The PGA has 111 signal pins, 26 power and ground pins, 7 reserved pins, and 1 alignment/ground pin. The cerquad has 111 signal pins, 30 power and ground pins, and 3 reserved pins.

The Am29035 microprocessor is available in a 144-pin cerquad package.

29K™ Family Development Support Products

Contact your local AMD representative for information on the complete set of development support tools.

Software development products on several hosts:

- Optimizing compilers for common high-level languages
- Assembler and utility packages
- Source- and assembly-level software debuggers
- Target-resident development monitors
- Simulators
- EZ-030, an Am29030 microprocessor-based evaluation board kit

Third-Party Development Support Products

The Fusion29K Program of Partnerships for Application Solutions provides the user with a vast array of products designed to meet critical time-to-market needs.

Products and solutions available through AMD's Fusion29K partners include:

- Silicon products
- Software generation and debug tools
- Hardware development tools
- Board level products
- Laser printer solutions
- Multiuser, kernel, and real-time operating systems
- Graphics solutions
- Networking and communications solutions
- Manufacturing support
- Custom support

LOGIC SYMBOL

ORDERING INFORMATION

Standard Products

AMD standard products are available in several packages and operating ranges. The order number (Valid Combination) is formed by a combination of the elements below.

Valid Combinations	
AM29030-33 AM29030-25	GC
AM29030-20 AM29035-16	FC/W

Valid Combinations

Valid Combinations list configurations planned to be supported in volume for this device. Consult the local AMD sales office to confirm availability of specific valid combinations and to check on newly released combinations.

ABSOLUTE MAXIMUM RATINGS

Storage Temperature -65°C to +150°C
 Voltage on any Pin
 with Respect to GND -0.5 to V_{CC} +0.5 V

Stresses above those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent device failure. Functionality at or above these limits is not implied. Exposure to absolute maximum ratings for extended periods may affect device reliability.

OPERATING RANGES

Commercial (C) Devices

Case Temperature (T_C) 0°C to +85°C
 Supply Voltage (V_{CC}) +4.75 to +5.25 V

Operating ranges define those limits between which the functionality of the device is guaranteed.

DC CHARACTERISTICS over COMMERCIAL operating ranges

Parameter Symbol	Parameter Description	Test Conditions	Preliminary		Unit
			Min	Max	
V _{IL}	Input Low Voltage		-0.5	0.8	V
V _{IH}	Input High Voltage		2.0	V _{CC} +0.5	V
V _{ILINCLK}	INCLK Input Low Voltage		-0.5	0.8	V
V _{IHINCLK}	INCLK Input High Voltage		2.0	V _{CC} +0.5	V
V _{ILMEMCLK}	MEMCLK Input Low Voltage		-0.5	0.8	V
V _{IHMEMCLK}	MEMCLK Input High Voltage		V _{CC} -0.8	V _{CC} +0.5	V
V _{OL}	Output Low Voltage for All Outputs except MEMCLK	I _{OL} = 3.2 mA		0.45	V
V _{OH}	Output High Voltage for All Outputs except MEMCLK	I _{OH} = -400 μA	2.4		V
I _{LI}	Input Leakage Current	0.45 V ≤ V _{IN} ≤ V _{CC} -0.45 V		±10	μA
I _{LO}	Output Leakage Current	0.45 V ≤ V _{OUT} ≤ V _{CC} -0.4 V		±10	μA
I _{CCOP}	Operating Power Supply Current	V _{CC} = 5.25 V, Outputs Floating; Holding RESET active with externally supplied MEMCLK 16.7 MHz Cerquad 20 MHz Cerquad 25 MHz PGA 33.3 MHz PGA		30 30 28 27	mA/MHz
V _{OLC}	MEMCLK Output Low Voltage	I _{OLC} = 20 mA		0.6	V
V _{OHc}	MEMCLK Output High Voltage	I _{OHc} = 20 mA	V _{CC} -0.6		V
I _{OSGND}	MEMCLK GND Short Circuit Current	V _{CC} = 5.0 V	100		mA
I _{OSVCC}	MEMCLK V _{CC} Short Circuit Current	V _{CC} = 5.0 V	100		mA

CAPACITANCE

Parameter Symbol	Parameter Description	Test Conditions	Preliminary		Unit
			Min	Max	
C _{IN}	Input Capacitance	f _C = 10 MHz		15	pF
C _{INCLK}	INCLK Input Capacitance			20	pF
C _{MEMCLK}	MEMCLK Capacitance			20	pF
C _{OUT}	Output Capacitance			20	pF
C _{I/O}	I/O Pin Capacitance			20	pF

SWITCHING CHARACTERISTICS over COMMERCIAL operating range (PGA)

No.	Parameter Description	Test Conditions	Preliminary				Unit
			25 MHz		33 MHz		
			Min	Max	Min	Max	
1	INCLK Period (T)		40	100	30	100	ns
2	INCLK High Time		16	84	14.4	85.6	ns
3	INCLK Low Time		16	84	14.4	85.6	ns
4	INCLK Rise Time		0	6	0	6	ns

15	MEMCLK High Time	MEMCLK Period=T MEMCLK Period=2T	16 T-3	84 T+3	14.4 T-3	85.6 T+3	ns
16	MEMCLK Low Time	MEMCLK Period=T MEMCLK Period=2T	16 T-3	84 T+3	14.4 T-3	85.6 T+3	ns
17	MEMCLK Rise Time		0	5	0	5	ns
18	MEMCLK Fall Time		0	5	0	5	ns

Notes:

- MEMCLK as an input is always CMOS level.
- MEMCLK can drive an external load of 150 pF.
- The input setup times with MEMCLK used as an input are improved if MEMCLK and INCLK are tied to the same clock input. This is possible only if the processor and bus operate at the same frequency.
- Except where noted, measurement conditions are the same as the Am29000 microprocessor.
- All output valid delays are measured with $V_{OL} = 1.5\text{ V}$ and $V_{OH} = 1.5\text{ V}$.

SWITCHING CHARACTERISTICS over COMMERCIAL operating range (Cerquad)

No.	Parameter Description	Test Conditions	Preliminary Information				Unit
			16 MHz		20 MHz

17	MEMCLK Rise Time		0	6	0	6	ns
18	MEMCLK Fall Time		0	6	0	6	ns

Notes:

- MEMCLK as an input is always CMOS level.
- MEMCLK can drive an external load of 150 pF.
- The input setup times with MEMCLK used as an input are improved if MEMCLK and INCLK are tied to the same clock input. This is possible only if the processor and bus operate at the same frequency.
- Except where noted, measurement conditions are the same as the Am29000 microprocessor.
- All output valid delays are measured with $V_{OL} = 1.5\text{ V}$ and $V_{OH} = 1.5\text{ V}$.

SWITCHING WAVEFORMS

Capacitive Output Delays

For loads greater than 80 pF

The following table describes the additional output delays for capacitive loads greater than 80 pF. Values in the Maximum Additional Delay column should be added

to the value listed in the Switching Characteristics table. For loads less than or equal to 80 pF, refer to the delays listed in the Switching Characteristics table. This table applies to the PGA package only.

No.	Parameter Description	Preliminary	
		Total External Capacitance (pF)	Maximum Additional Delay (ns)
7	Synchronous MEMCLK Output Valid Delay	100 pF	+1 ns
		150 pF	+2 ns
		200 pF	+4 ns
		250 pF	+6 ns
		300 pF	+8 ns
7a	Synchronous MEMCLK Output Valid Delay for ID31-ID0	100 pF	+1 ns
		150 pF	+6 ns
		200 pF	+10 ns
		250 pF	+15 ns
		300 pF	+19 ns

SWITCHING TEST CIRCUIT

Note: C_L is guaranteed to 80 pF. For capacitive loading greater than 80 pF, refer to the Capacitive Output Delay table.

THERMAL CHARACTERISTICS**Pin-Grid-Array Package**

$$\theta_{JA} = \theta_{JC} + \theta_{CA}$$

Thermal Resistance – °C/Watt

Pin-Grid-Array Package

		Airflow (LFPM)			
		0	150	300	500
θ_{JC}	Junction-to-Case	3	–	–	–
θ_{CA}	Case-to-Ambient	20	18	16	13

Cerquad Package

		Airflow (LFPM)			
		0	150	300	500
θ_{JC}	Junction-to-Case	7.5	–	–	–
θ_{CA}	Case-to-Ambient	20.8	18.7	16.4	13.3
