RP60-G

60 Watt
2" x 2"
Single Output

Description

The RP60-G series DC/DC converters deliver 60W of power in an industry standard 2" x 2" package, which also meets military standards for thermal shock and vibration tolerance. Sense pins allow the output voltage at the point of load to be tightly regulated and automatically compensate for any voltage drops that may occur across any connections.

REGULATIONS

Parameter	Condition	Value
Output Voltage Accuracy	full load and nominal input	±1.0%

Notes:

Note7: Maximum output deviation is 10% inclusive of remote sense and trim. If remote sense is not being used, the +sense should be connected to its corresponding +OUTPUT and likewise the -sense should be connected to its corresponding -OUTPUT.

Note8: No minimum loading on the output is required to maintain specified regulation. Operation under no-load condition will not damage these devices.

External Output Trimming

Output Voltage Trimming

Single output Powerline converters offer the feature of trimming the output voltage over a certain range around the nominal value by using external trim resistors. No general equation can be given for calculating the trim resistors, but the following trimtables give typical values for choosing these trimming resistors. If voltages between the given trim points are required, extrapolate between the two nearest given values to work out the resistor required or use a variable resistor to set the output voltage. Output can be externally trimmed by using the method shown below.
