TYPICAL PERFORMANCE

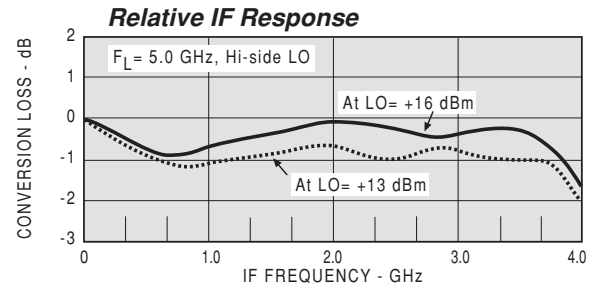

¹Level of the f_L signal fed through to the R- and I-ports with respect to the level of the f_L signal at the L-port.

² VSWR of the I- and R-ports in a 50-ohm system. Some variation in the R-port VSWR will occur as a function of the L-port frequency as shown above.

³Conversion loss of the mixer when used in an SSB system. The frequency ordinate refers to the R-port (f_R) with f_I at 30 MHz.
